# 49 year old male - "Crushing chest pressure" . . . .

# Wayne Ruppert - Bio:

- Cardiovascular Coordinator 2012-present (coordinated 4 successful accreditations)
- Interventional Cardiovascular / Electrophysiology Technologist, 1995-Present. (Approx 13,000 patients)
- Author of: "**12 Lead ECG Interpretation in Acute Coronary Syndrome with Case Studies from the Cardiac Cath Lab**," 2010, TriGen publishing / Ingram Books
- Author of: "**STEMI Assistant**," 2014, TriGen publishing / Ingram Books
- Florida Nursing CE Provider # 50-12998
- 12 Lead ECG Instructor, 1994-present (multiple hospitals, USF College of Medicine 1994)
- Website: www.ECGtraining.org

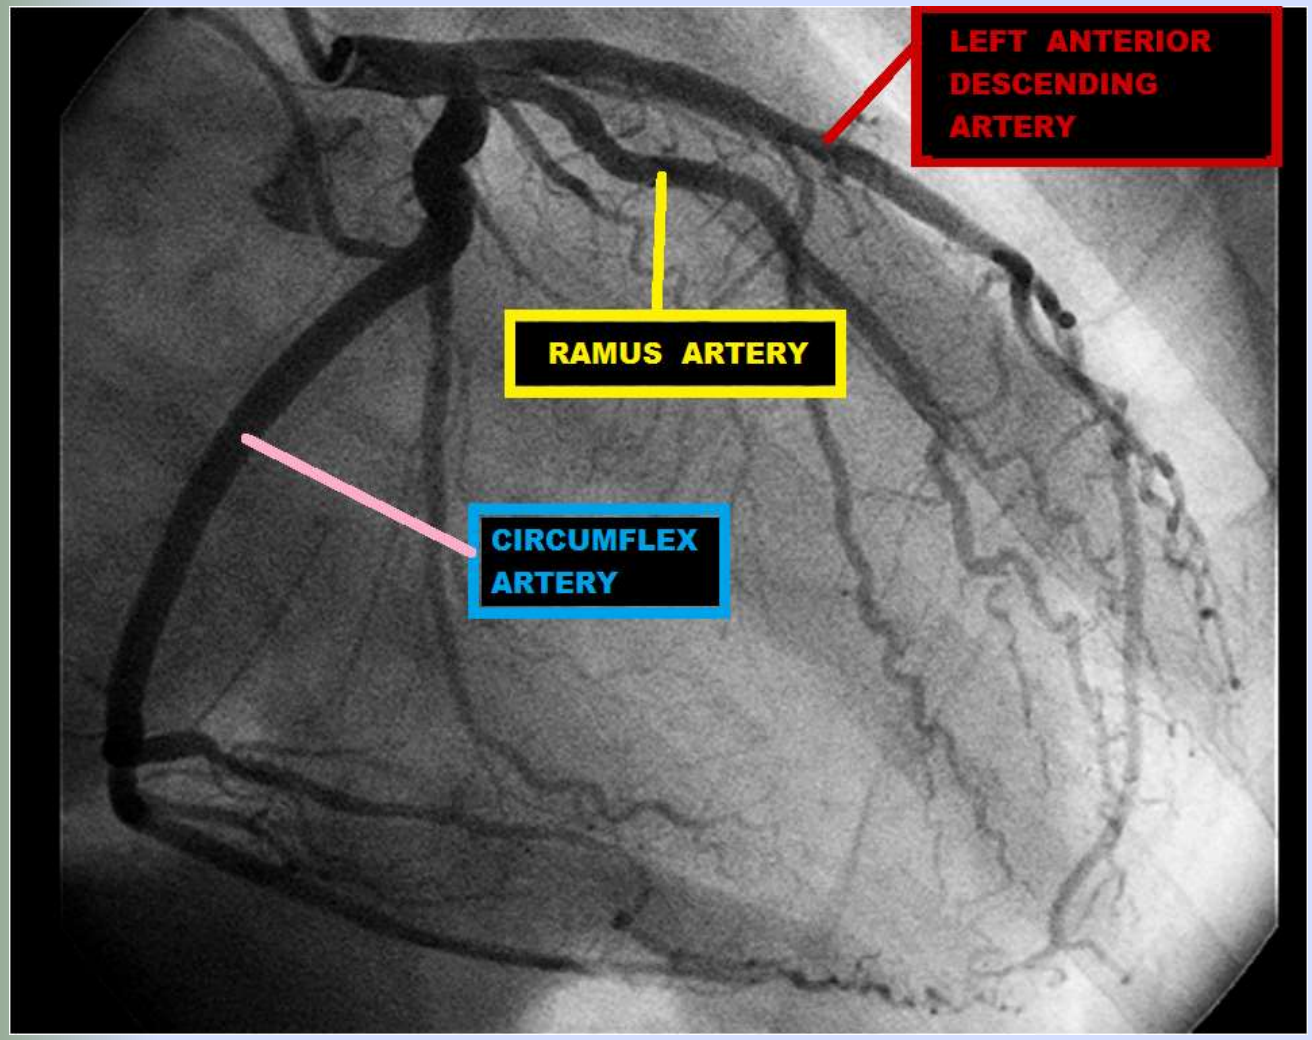
# Source of Curriculum:

- Case Studies from Cardiac Catheterization and Electrophysiology Labs, 1996 – Present

# 13,000 – 15,000 EP and Cath Lab cases between 1996 - Today

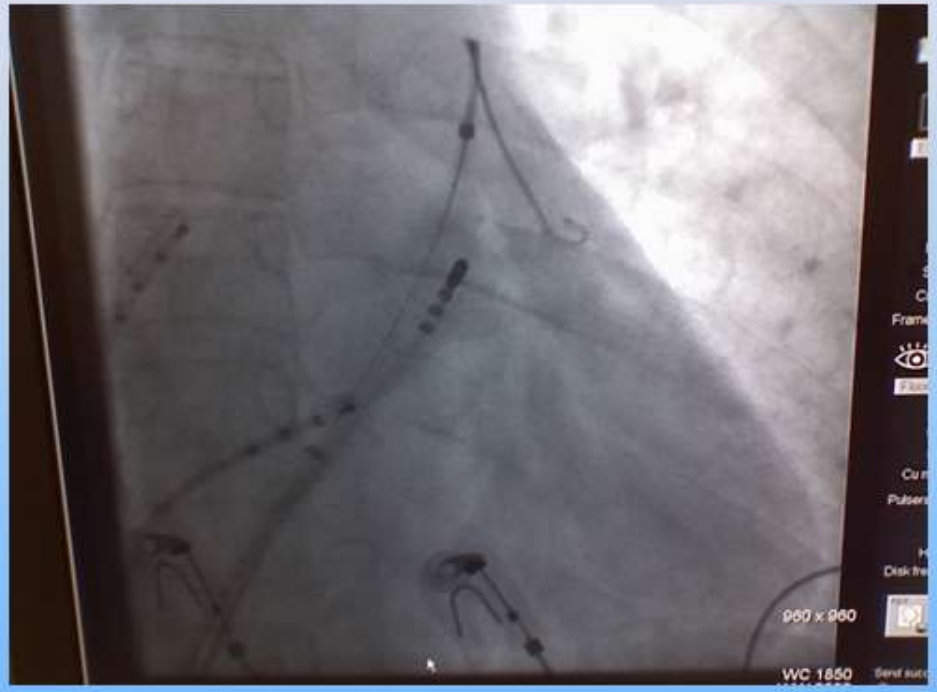
Wayne Ruppert and Dr. James Irwin, St Joseph's Hospital, Tampa, 7/29/2004

# Cardiac Cath Lab Advantage:



Correlation of ECG leads with SPECIFIC cardiac anatomic structures.

# Electrophysiology Lab Case Studies

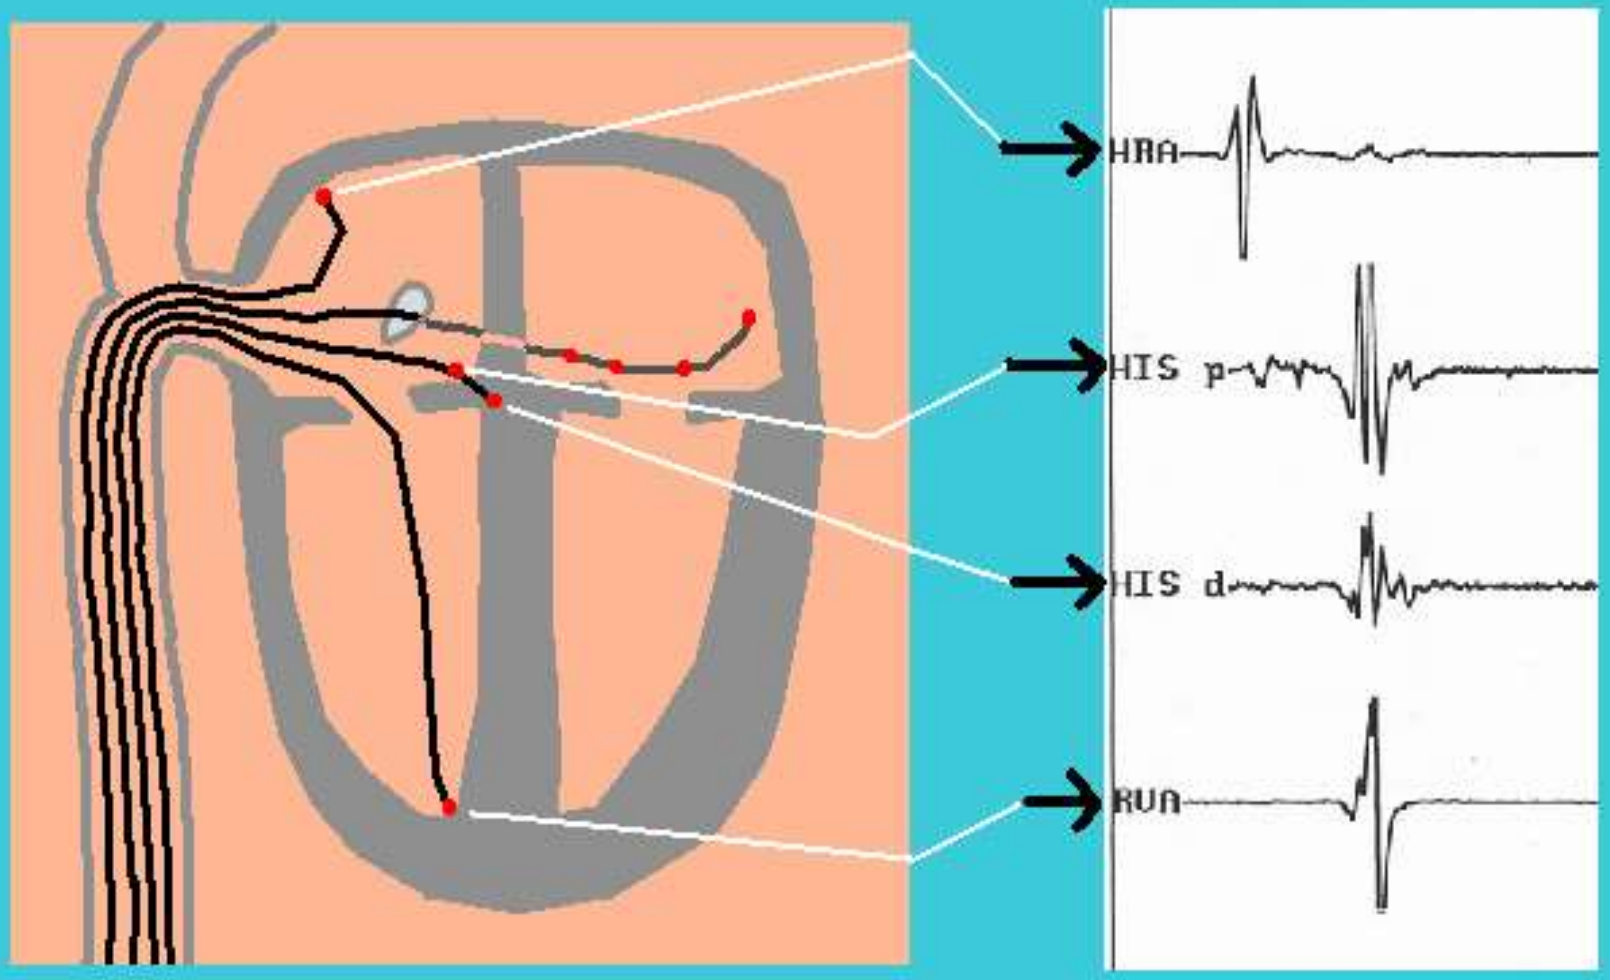


EP Catheters within the heart used for obtaining the Electrogram (the "internal ECG") Tracing and for Pace-mapping, an integral component of an EP study

Author Wayne Ruppert conducting Pace-mapping during EP study at the St Joseph's Hospital Heart Institute, Pediatric Electrophysiology Program, Tampa, FL in 2004

# THE ELECTROGRAM - THE INTERNAL EKG

## THE ELECTROPHYSIOLOGY ( EP ) LAB



# EP Lab  Advantage:

Correlation of ECG derived diagnosis with true intra-cardiac electrogram acquired diagnosis.

  - American Heart Association (AHA) Circulation
  - ACC/AHA Guidelines
  - New England Journal of Medicine
- Two peer reviewed, published textbooks

In the CARDIAC CATHETERIZATION LAB, we read our patients' 12 Lead ECGs and then evaluate their coronary arteries and ventricular function during angiography. Stated in plain English, *we rapidly learn how to correlate 12 lead ECG findings with what's really going on inside our patients' hearts.* Seeing ECGs from this perspective adds a new dimension to understanding the complex pathophysiologies of cardiovascular disease.

This book prepares you to:

- INTERPRET 12 Lead ECGs.
- ASSIMILATE DATA derived from the 12 Lead ECG into a comprehensive patient evaluation process designed to maximize diagnostic accuracy, while taking into consideration the 12 Lead ECGs inherent LACK of SENSITIVITY and SPECIFICITY.
- IDENTIFY 13 PATTERNS associated with myocardial ischemia and infarction, including the most subtle ECG changes often missed by clinicians and the ECG machine's computerized interpretation software.
- CORRELATE each lead of the ECG with specific regions of the heart – and the CORONARY ARTERIAL DISTRIBUTION that commonly supplies it. In cases of STEMI, this knowledge prepares you to ANTICIPATE the FAILURE OF CRITICAL CARDIAC STRUCTURES – often *BEFORE THEY FAIL.*

**For those who need to master essential material quickly, this book has been written with an expedited learning" feature, *designed to make learning as easy as 1 2 3:***

1. **READ the YELLOW HIGHLIGHTED TEXT**
2. **STUDY the GRAPHIC IMAGES, PICTURES and ECGs**
3. **CORRECTLY ANSWER the REVIEW QUESTIONS at the end of each section.**

This is an invaluable resource for every medical professional who evaluates patients and reads their 12 lead ECGs:

- *Fellows in Emergency, Cardiology, and Family Medicine*
- *Medical Residents*
- *Veteran Physicians wanting a good review in ACS patient evaluation*
- *Physician Assistants and Nurse Practitioners*
- *Emergency Department Nurses*
- *Coronary Care Unit and Cardiac Telemetry Nurses*
- *Walk-in Clinic Physicians and Nurses*
- *Paramedics*

*"I think this book will be a wonderful addition to the textbooks that are already available, with a fresh perspective'"*

**Joseph P. Ornato, MD, FACP, FACC, FACEP**
- Professor and Chairman, Department of Emergency Medicine
Medical College of Virginia/Virginia Commonwealth University
- Medical Director, Richmond Ambulance Authority,
Richmond, Virginia

*"This book integrates academic ECG principles with real-world clinical practice by incorporation of well chosen cath lab case studies into its curriculum. This combination lets readers see patients and their ECGs through the eyes of an experienced cath lab interventionalist, and provides a balanced approach to patient evaluation that compensates for the ECGs inherent lack of sensitivity and specificity. I highly recommend this book for all Emergency Medicine and Cardiology Fellows. For experienced clinicians, it's a superb review."*

**Humberto Coto, MD, FACP, FACC**
- Chief of Interventional Cardiology
St. Joseph's Hospital
Tampa, Florida

# The EKG in PERSPECTIVE

1. Much development in the 1950s and 60s, and at that time, EKGs were the primary diagnostic tool.

2. Today we have better diagnostic tools (e.g. ECHO, CARDIAC CATH, EP STUDIES) that sometimes conflict with traditional EKG-made diagnoses.

3. Some EKG findings are more accurate and reliable than others .

***AND . . .***

# *Sometimes, ECGs LIE to us !*

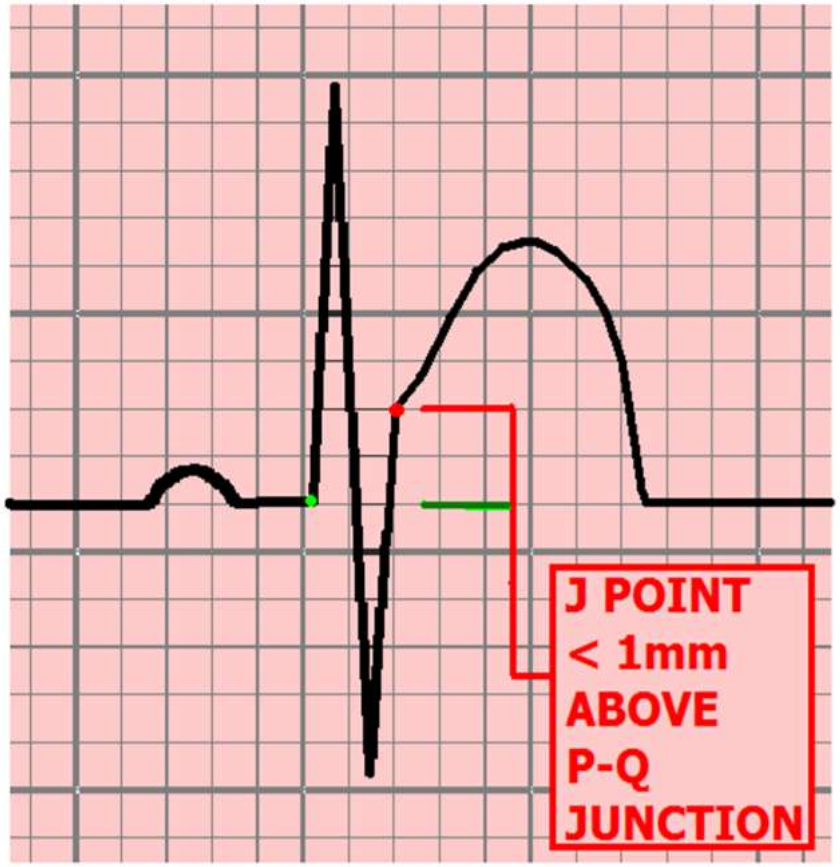
# PROBLEMS WITH SPECIFICITY . . .

## S-T SEGMENT ELEVATION - COMMON ETIOLOGIES:



CONDITION:

- ACUTE INFARCTION
- HYPERKALEMIA
- BRUGADA SYNDROME
- PULMONARY EMBOLUS
- INTRACRANIAL BLEED
- MYOCARDITIS / PERICARDITIS
- L. VENT. HYPERTROPHY
- PRINZMETAL'S ANGINA
- L. BUNDLE BRANCH BLOCK
- PACED RHYTHM
- EARLY REPOLARIZATION & "MALE PATTERN" S-T ELEV.

# ST-Segment Elevation in Normal Circumstances and in Various Conditions

**Table 1. ST-Segment Elevation in Normal Circumstances and in Various Conditions.**

| Condition | Features |
|---|---|
| Normal (so-called male pattern) | Seen in approximately 90 percent of healthy young men; therefore, normal<br>Elevation of 1–3 mm<br>Most marked in $V_2$<br>Concave |
| Early repolarization | Most marked in $V_4$, with notching at J point<br>Tall, upright T waves<br>Reciprocal ST depression in aVR, not in aVL, when limb leads are involved |
| ST elevation of normal variant | Seen in $V_3$ through $V_4$ with inverted T waves<br>Short QT, high QRS voltage |
| Left ventricular hypertrophy | Concave<br>Other features of left ventricular hypertrophy |
| Left bundle-branch block | Concave<br>ST-segment deviation discordant from the QRS |
| Acute pericarditis | Diffuse ST-segment elevation<br>Reciprocal ST-segment depression in aVR, not in aVL<br>Elevation seldom >5 mm<br>PR-segment depression |
| Hyperkalemia | Other features of hyperkalemia present:<br>Widened QRS and tall, peaked, tented T waves<br>Low-amplitude or absent P waves<br>ST segment usually downsloping |
| Brugada syndrome | rSR' in $V_1$ and $V_2$<br>ST-segment elevation in $V_1$ and $V_2$, typically downsloping |
| Pulmonary embolism | Changes simulating myocardial infarction seen often in both inferior and anteroseptal leads |
| Cardioversion | Striking ST-segment elevation, often >10 mm, but lasting only a minute or two immediately after direct-current shock |
| Prinzmetal's angina | Same as ST-segment elevation in infarction, but transient |
| Acute myocardial infarction | ST segment with a plateau or shoulder or upsloping<br>Reciprocal behavior between aVL and III |

## Abstract

### Introduction

The History, Electrocardiogram (ECG), Age, Risk Factors, and Troponin (HEART) score is a decision aid designed to risk stratify emergency department (ED) patients with acute chest pain. It has been validated for ED use, but it has yet to be evaluated in a prehospital setting.

### Hypothesis

# “HEART” – minus the “T”

| **H**istory | **Value** |
|---|---|
| Highly Suspicious | 2 |
| Moderately Suspicious | 1 |
| Slightly Suspicious | 0 |
| **ECG** | |
| Significant ST-Depression | 2 |
| Non-Specific Repolarization Disturbance | 1 |
| Normal | 0 |
| **A**ge | |
| ≥ 65 years | 2 |
| 45-65 years | 1 |
| ≤ 45 years | 0 |
| **R**isk Factors | |
| ≥ 3 Risk Factors or History of Atherosclerotic Disease | 2 |
| 1 or 2 Risk Factors | 1 |
| No Risk Factors Known | 0 |
| **Total** | **0-8** |
| “Low Risk” = 0-3 and Normal Troponin<br>“High Risk” = 4-8 **or** Troponin (>0.065 ng/ml) | |

# HEAR Score (Prehospital version)

- HEART – minus the "T" (troponin)
- HEAR Score validated in multiple studies.
- LINK to Cambridge University Journal article on "HEAR Score" for Prehospital use.
- SCORE 0 – 2 = "NEGATIVE"
- SCORE 2 - 4 = "Should be evaluated"
- SCORE 4+ = "Suspicious for ACS"

# HEART Pathway 12+

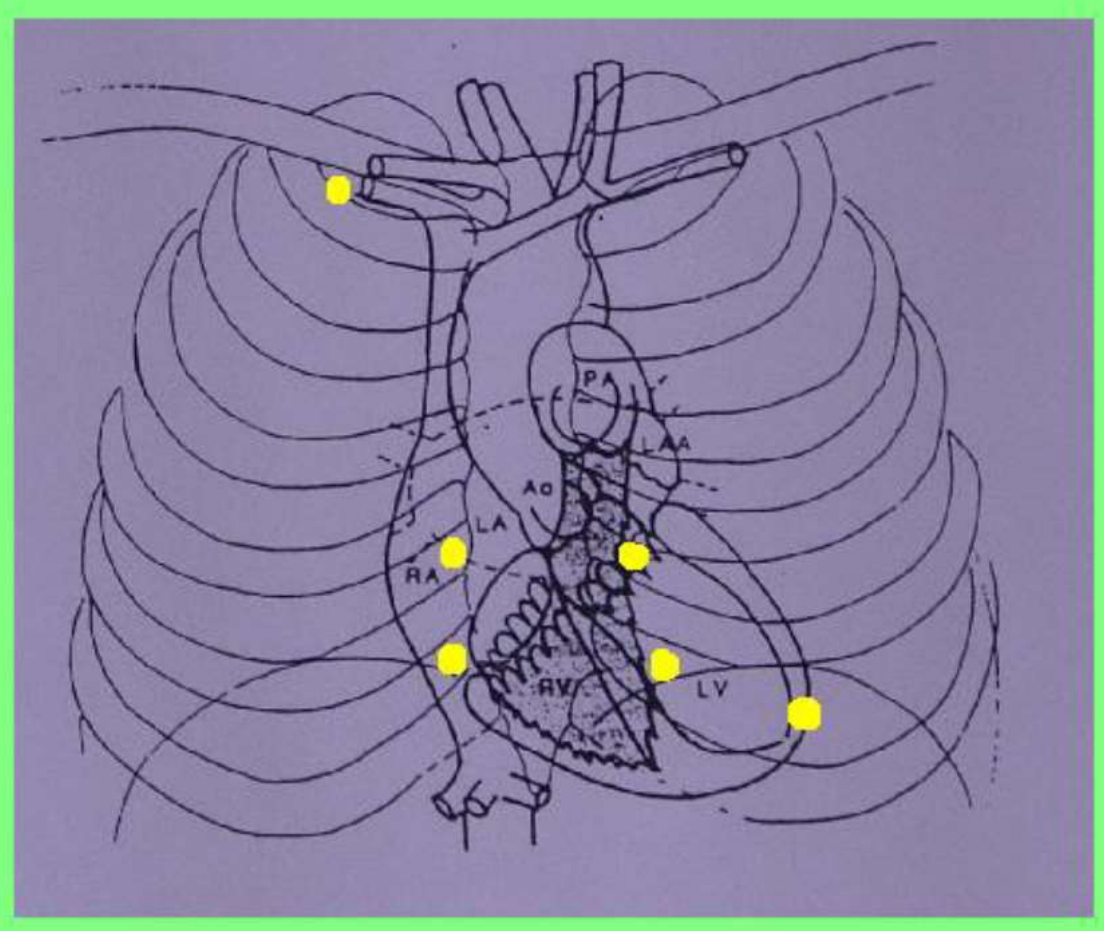
# HEART SOUNDS ASSESSMENT

# HEART SOUNDS ASSESSMENT



# VERY BASIC HEART SOUNDS ASSESSMENT

- Normal Heart Sounds
- Murmurs
  - systolic
  - diastolic
- Friction Rubs

SCOTT DAVIDSON, RN auscultating heart sounds at St. Joseph's Hospital Heart Institute Tampa, FL

# HEART SOUNDS ASSESSMENT

HEART SOUNDS ARE GENERATED BY THE SOUND OF THE HEART VALVES CLOSING.

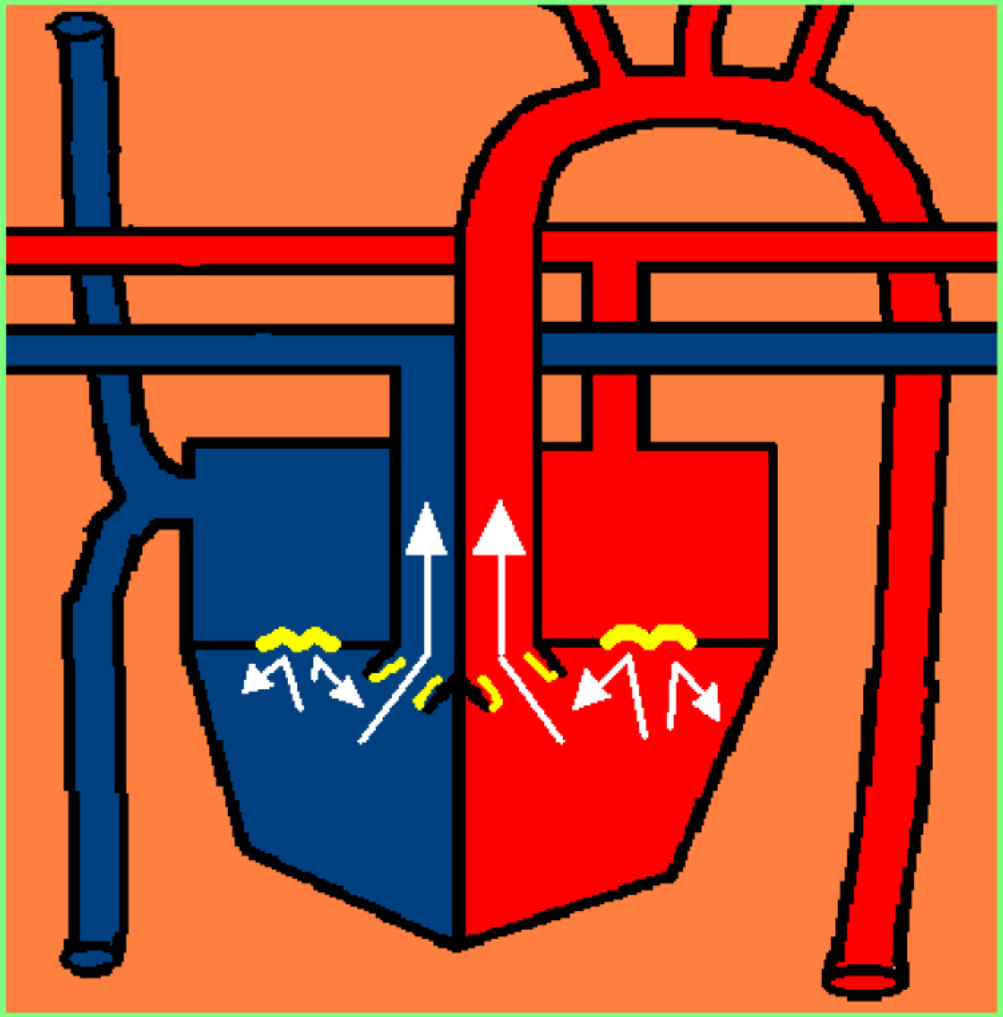
THERE ARE TWO NORMAL HEART SOUNDS, KNOWN AS: S-1 and S-2

WE OFTEN DESCRIBE THESE HEART SOUNDS AS "LUB - DUP"

# HEART SOUNDS ASSESSMENT

**S-1 BEGINNING OF SYSTOLE.**

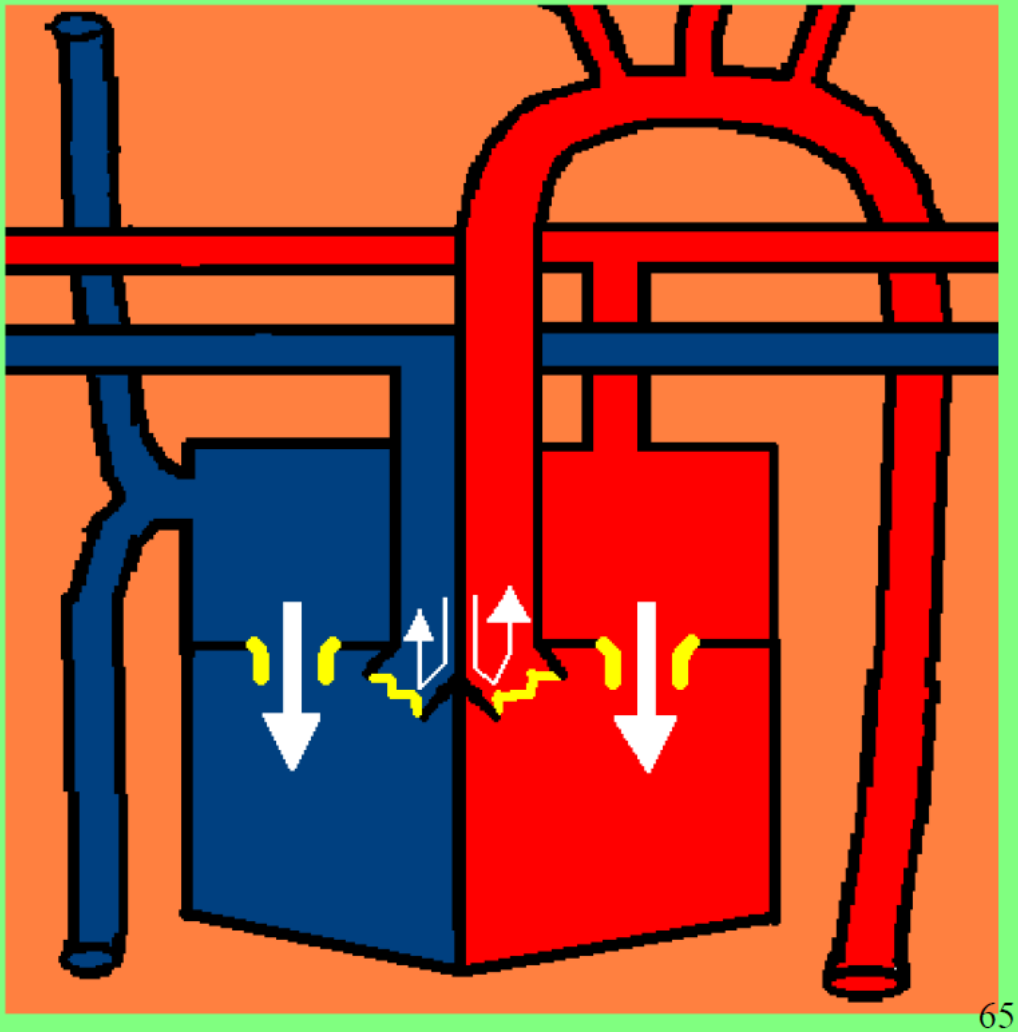
**SOUND OF THE MITRAL AND TRICUSPID VALVES CLOSING.**



# HEART SOUNDS ASSESSMENT

S-2 OCCURS AT THE END OF SYSTOLE (THE BEGINNING OF DIASTOLE).

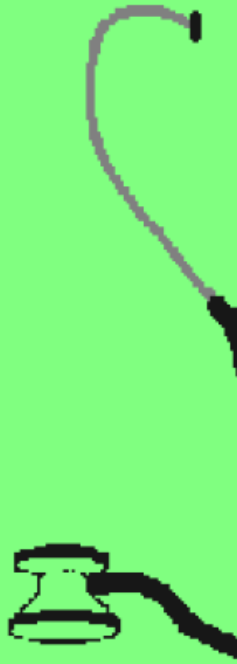
IT IS THE SOUND OF THE AORTIC AND PULMONARY VALVES CLOSING.



MURMUR = "SWOOSH"
SOUND CAUSED BY THE
SOUND OF TURBULENCE.

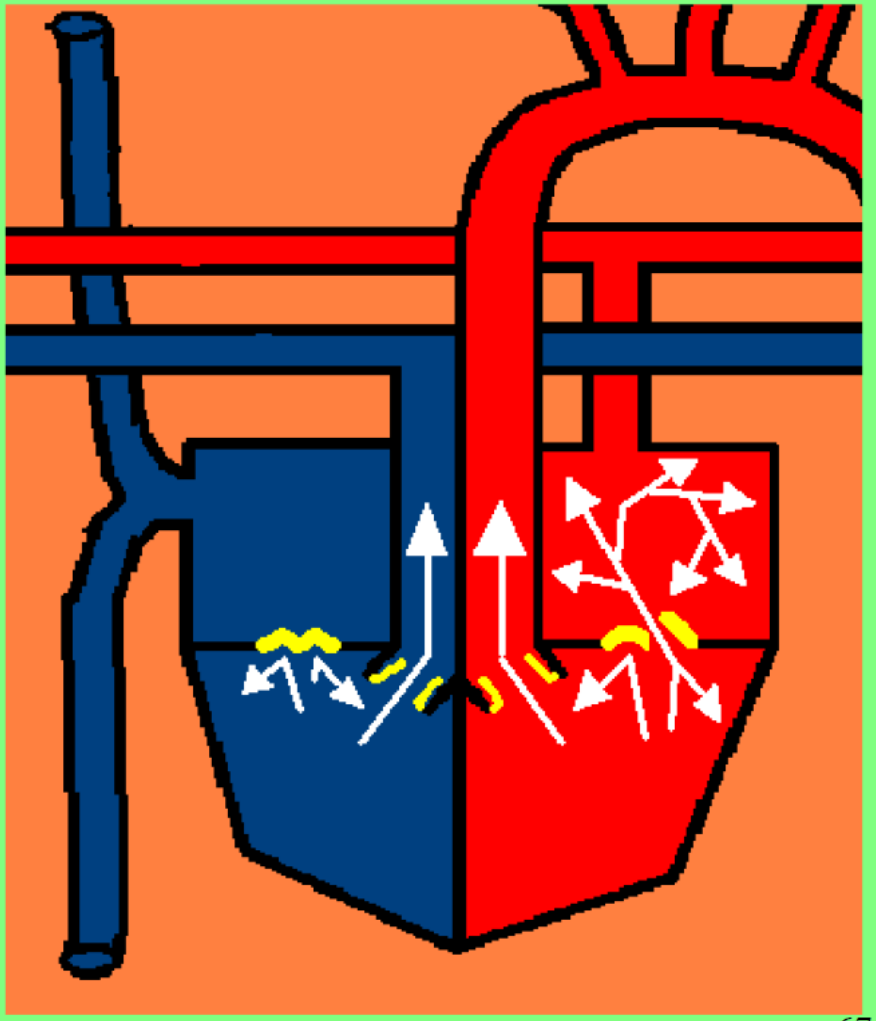
S-1 MURMUR SOUNDS LIKE:

"SWOOSH-DUB . . . . SWOOSH-
DUB . . . . SWOOSH-DUB . . . .
SWOOSH-DUB . . . "



# CAUSE OF SYSTOLIC (S 1) MURMUR

- **DAMAGE TO MITRAL and/or TRICUSPID VALVE(s)**
- **CAUSES REGURGITATION**



- **MOST SYSTOLIC MURMURS CAUSED BY MITRAL VALVE FAILURE.**

- **ACUTE MITRAL VALVE REGURGITATION IS A POTENTIALLY LETHAL COMPLICATION OF ACUTE / RECENT EXTENSIVE TRANSMURAL MI**

**ACUTE MITRAL VALVE RUPTURE USUALLY OCCURS 7-10 DAYS POST EXTENSIVE MI (e.g.: INFERIOR POSTERIOR LATERAL MI).**

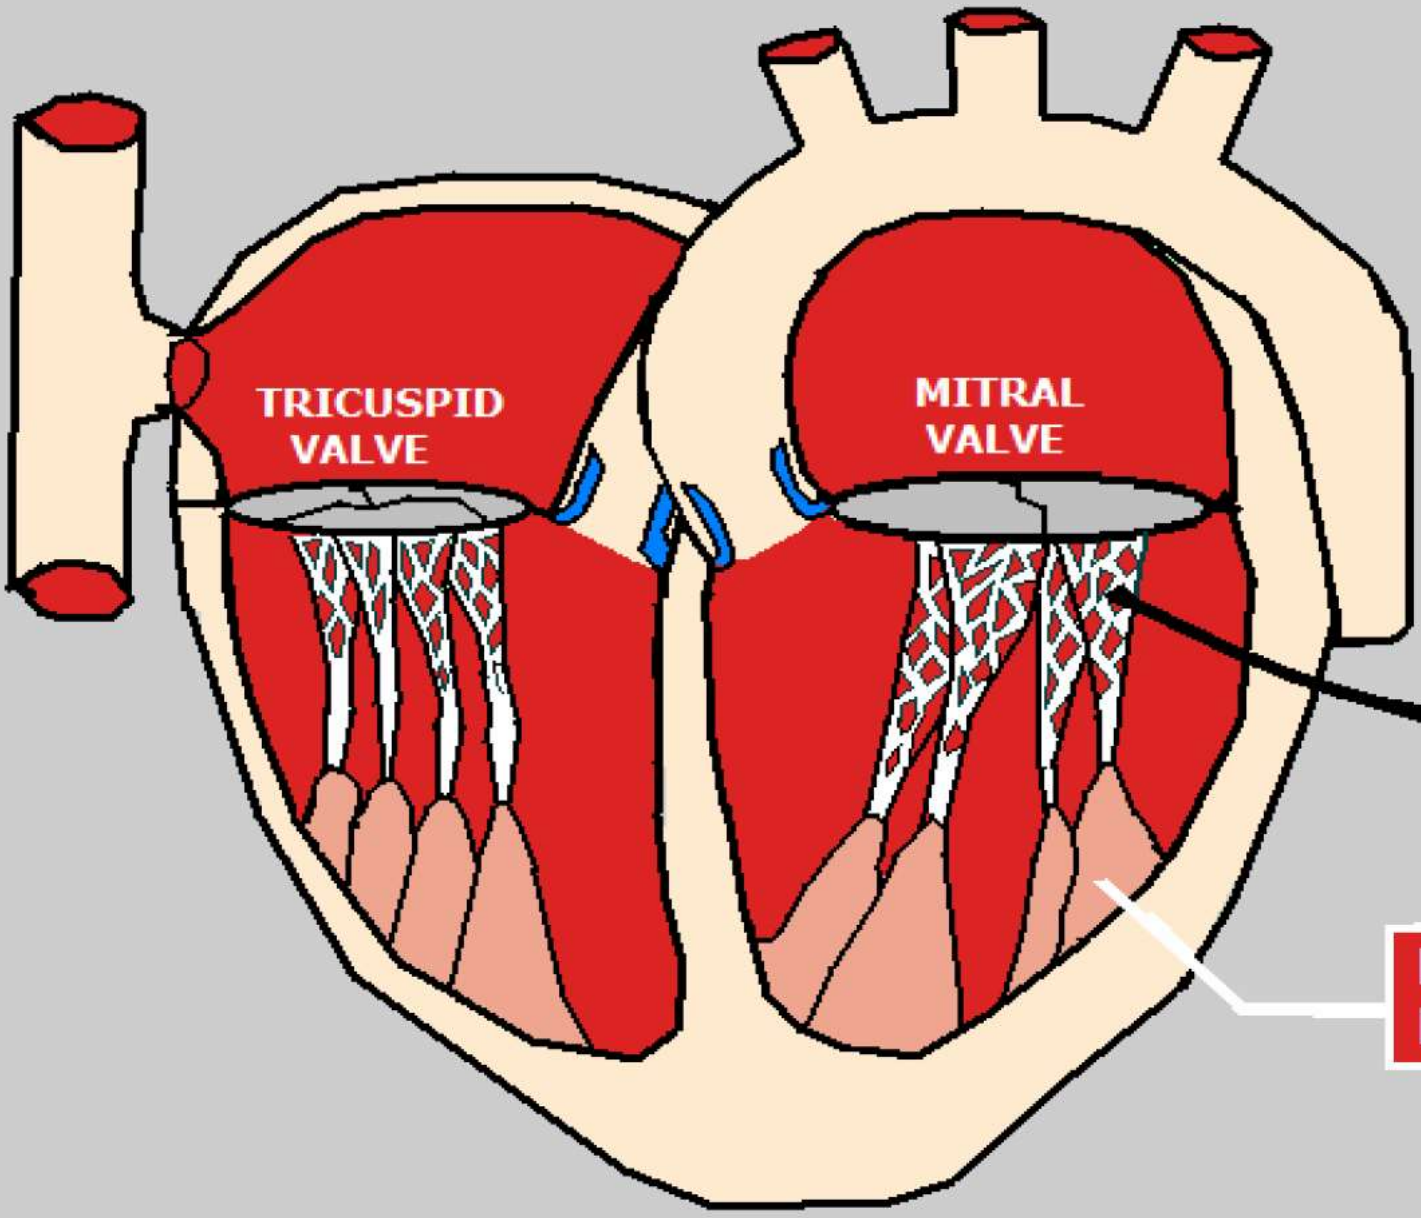
**ACUTE Mitral Valve REGURGITATION can be caused by EXTENSIVE "Multi-Site" Myocardial Infarction and Necrosis – which results in PAPILLARY MUSCLE NECROSIS and PAPILLARY MUSCLE TEAR.**

**Papillary muscles are attached to "multiple surfaces" . . . . .**

# A Common Cause of ACUTE MITRAL REGURGITATION is:

"Patients who are 7-10 days POST-EXTENSIVE MI," in cases where the "zone of infarction" is large (e.g. "inferior-posterior-lateral") and there was a delay in PCI resulting in large zone of necrosis.

# ATRIO-VENTRICULAR VALVES



ARE SECURED TO THE ENDO-CARDIAL SURFACE BY THE

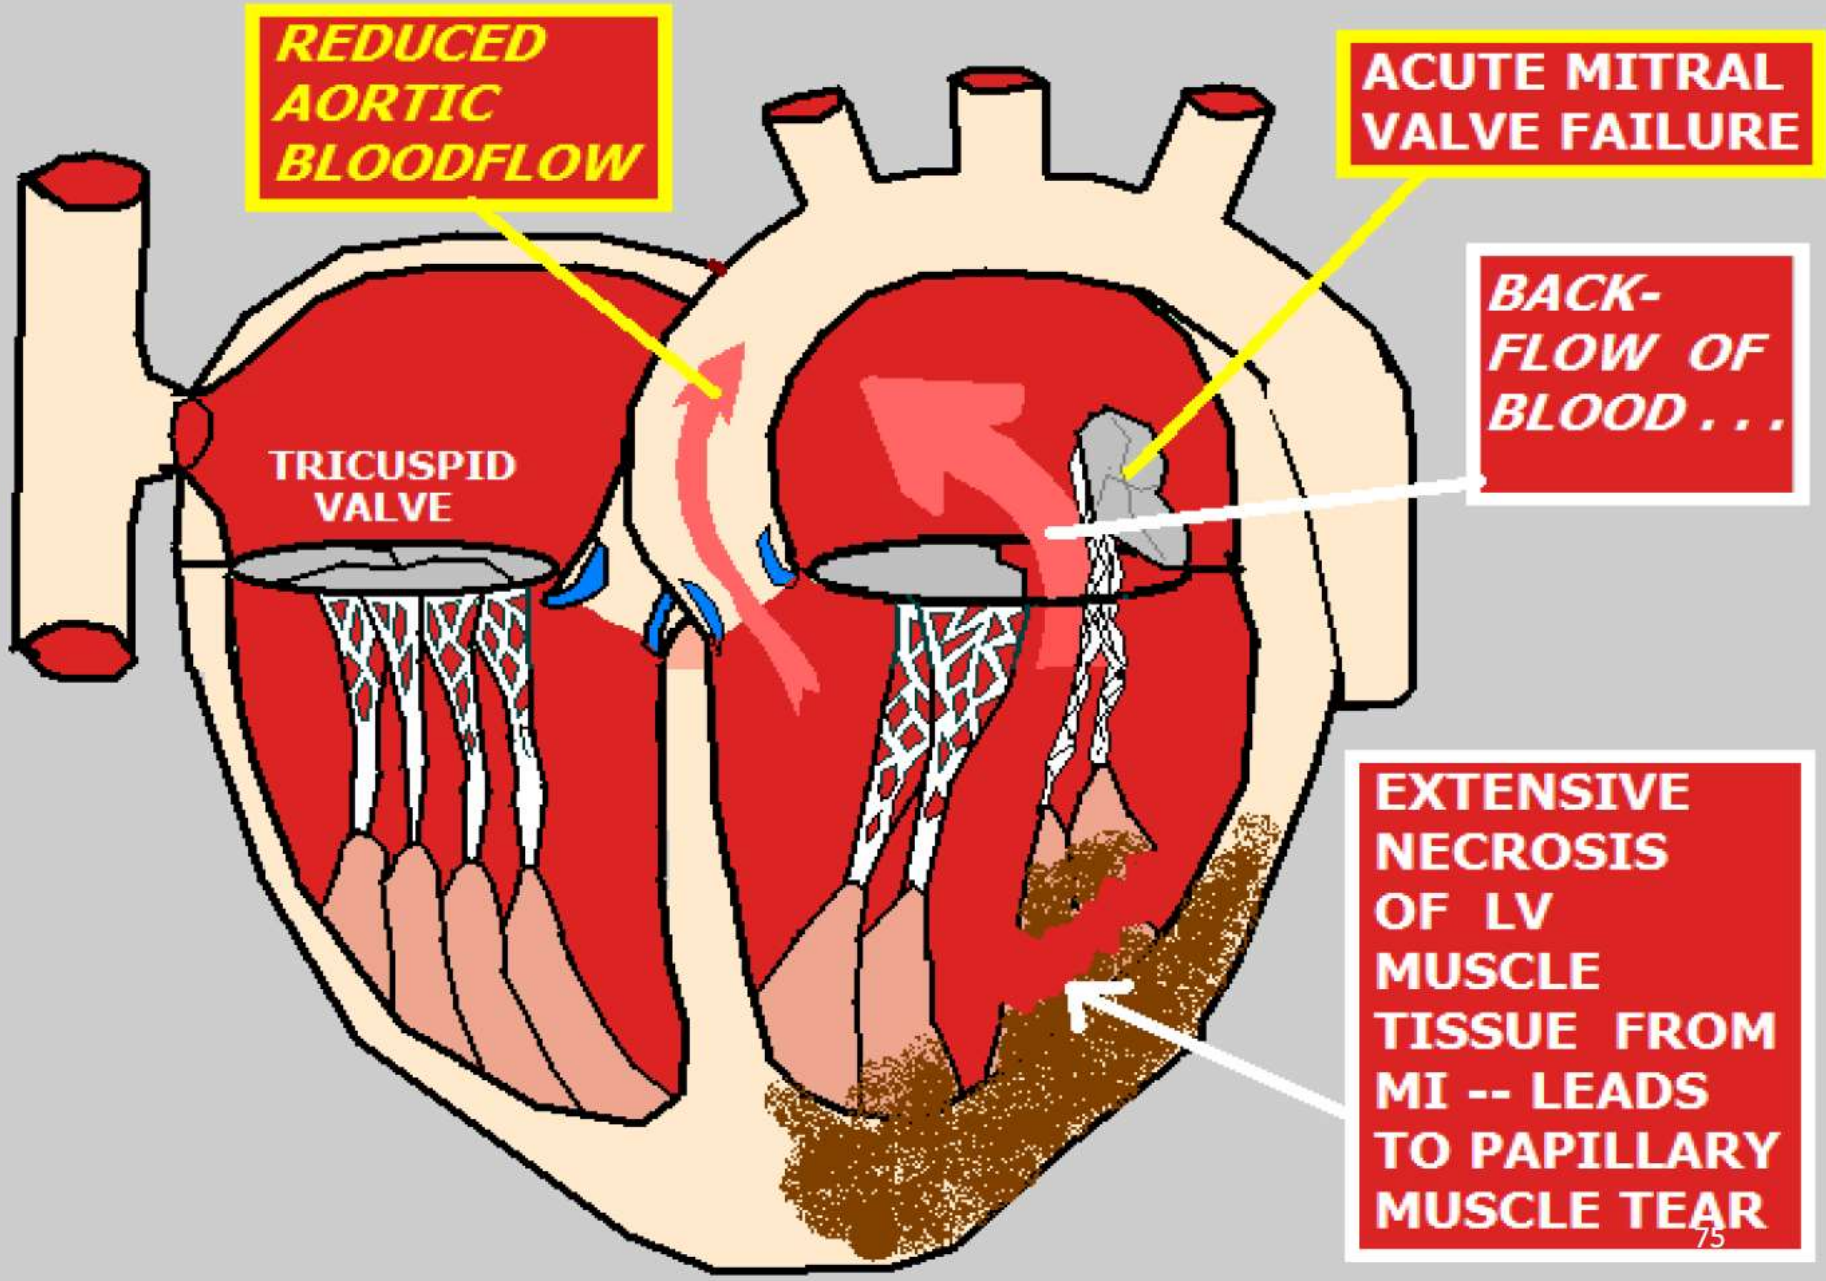
CHORDAE TENDINEAE

AND THE

PAPILLARY MUSCLES

# ACUTE MITRAL REGURGITATION

## DURING VENTRICULAR SYSTOLE



# Symptoms of Acute Mitral Regurgitation

- SHOCK
- PROFOUND HYPOTENSION
- PINK, FROTHY SPUTUM
- PULMONARY EDEMA
- SYSTOLIC (S1) MURMUR

***"SWOOSH – DUB……SWOOSH – DUB……SWOOSH – DUB…"***

# BASIC HEART SOUNDS ASSESSMENT

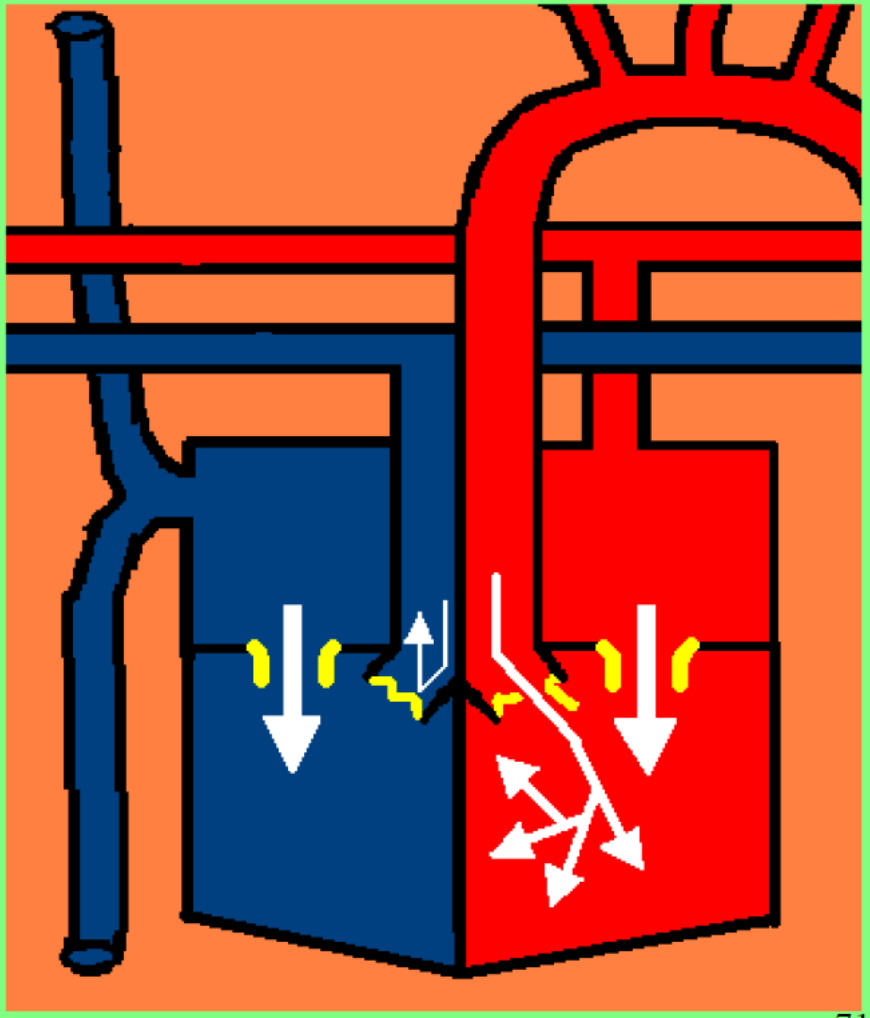
**MURMUR = "SWOOSH"
SOUND CAUSED BY THE
SOUND OF TURBULENCE.**

**S-2 MURMUR SOUNDS LIKE:**

**"LUB-SWOOSH . . . . LUB-SWOOSH
. . . .LUB-SWOOSH . . . . LUB-
SWOOSH . . . "**

# CAUSE OF DIASTOLIC (S2) MURMUR

- **DAMAGE TO AORTIC and/or PULMONIC VALVE(s)**
- **CAUSES REGURGITATION**



Chronic **Valvular REGURGITATION** (Leaky Valve) leads to elevated heart chamber pressures and DILITATION.

Chronic **Valvular STENOSIS** (“Creaky” Valve) leads to Cardiac Muscle STRAIN and HYPERTROPHY.

BOTH conditions, if untreated, eventually leads to **HEART FAILURE.**

# Heart Sounds: S3

- S3 sounds like: " kenTUCky . . . kenTUCky"
- Caused by: increased atrial pressure.
- S3 is associated with: **Heart Failure, Dilated Cardiomyopathy.**

# Heart Sounds: S4

- S4 sounds like: "TENnessee. . . TENnessee"
- Caused by: stiffened left ventricle.
- S4 is associated with: **Hypertension, Aortic Stenosis, Ischemic** or **Hypertrophic Cardiomyopathy.**

# BASIC HEART SOUNDS ASSESSMENT

## FRICTION RUB

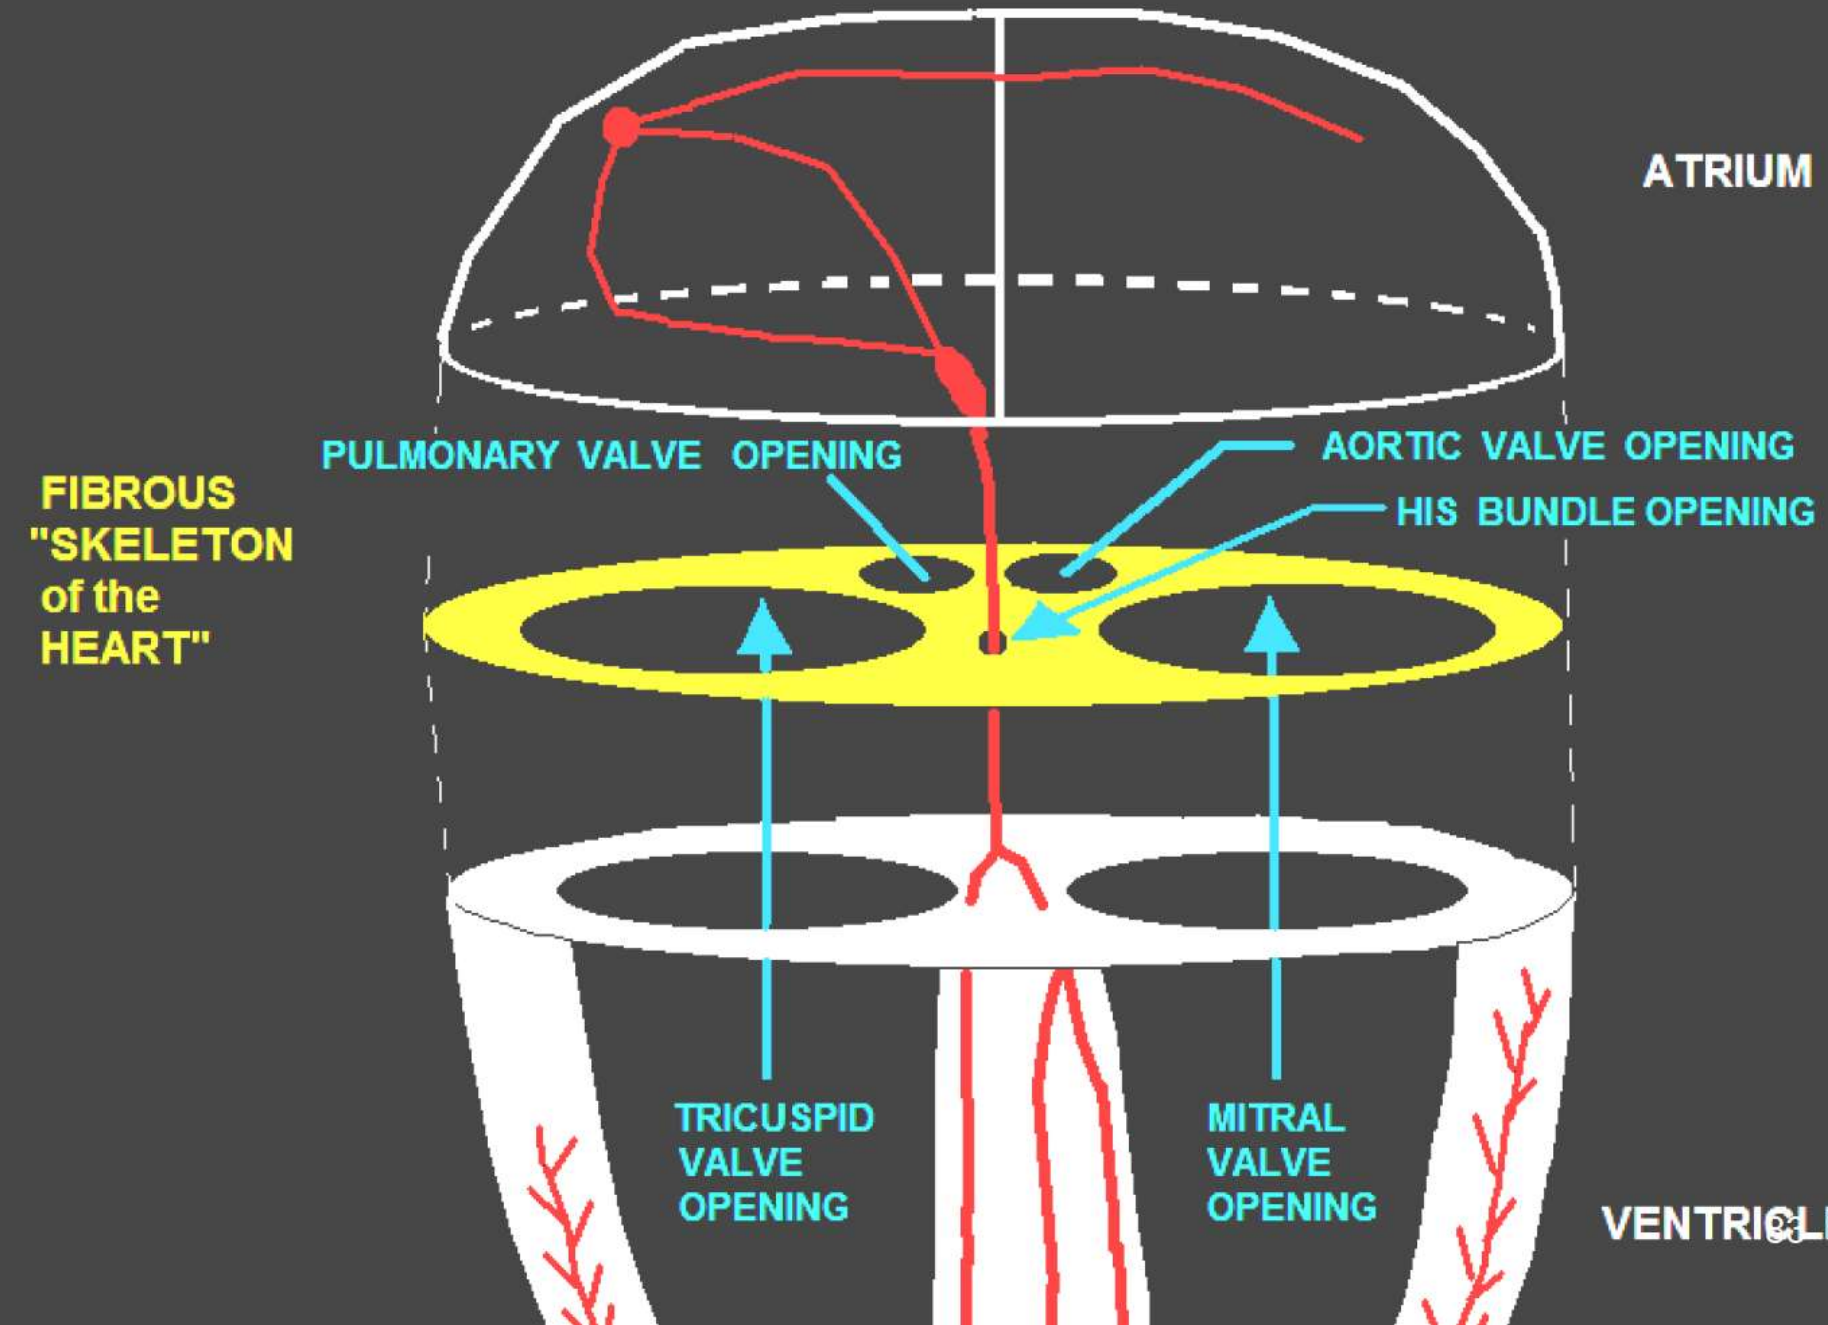
- ASSOCIATED WITH PERICARDITIS
- SOUNDS LIKE THE GENTLE RUBBING OF SANDPAPER
- HAS 3 COMPONENTS: SYSTOLIC, EARLY, and LATE DIASTOLIC

# BASIC HEART SOUNDS ASSESSMENT

## FRICTION RUB

- IS PRESENT IN MOST ACUTE TRANSMURAL MI PATIENTS
- MAY BE PRESENT WITHIN HOURS AFTER ONSET
- IS TRANSIENT -- MAY LAST FOR A FEW DAYS

# THE "SKELETON OF THE HEART"



# Fibrous Skeleton of the Heart…

- Rarely taught ….. But it's so important to understanding cardiac function and ECGs…..
- It's a disk-shaped structure separating the atrium from the ventricles.
- Secures the heart valves.
- Acts as an electrical insulator, blocks electrical current……
- **An abnormal hole (BYPASS TRACT) allows current to "leak" between atrium and ventricles**

# 12 LEAD ECG

And have it interpreted by a physician or mid-level provider
***…within 10 minutes !***

# Obtaining the 12 Lead ECG

- **Limb leads should be on the limbs.**

# Obtaining the 12 Lead ECG

- **Limb leads should be on the limbs.**
- **When emergency circumstances dictate that limb leads be placed on patient's torso, the words "LIMB LEADS ON PATIENT'S TORSO" should be noted on the ECG.**

# Obtaining the 12 Lead ECG

**Recent AHA/ACC/HRS literature indicates QRS AMPLITUDE, Q WAVE DURATION, AXIS and WAVEFORM DEFLECTION can be altered when limb leads are placed on the patient's torso (Mason-Likar lead placement).**

***Therefore every effort should be made to place limb leads on the limbs.***

# Recommendations for the Standardization and Interpretation of the Electrocardiogram

## Part I: The Electrocardiogram and Its Technology

affected by monitoring lead placement; however, tracings that use torso electrodes differ in important ways from the standard 12-lead ECG. In addition to body position differences that affect the ECG,[109] monitoring electrodes placed on the trunk do not provide standard limb leads, and distortion of the central terminal alters the augmented limb leads and the precordial leads.[110,111] Tracings with Mason-Likar and other alternative lead placement may affect QRS morphology more than repolarization compared with the standard ECG; these differences can include false-negative and false-positive infarction criteria.[81,112] Motion artifact of the limbs is a particular problem for routine recording in neonates, infants, and

## Recommendations for the Standardization and Interpretation of the Electrocardiogram

### Part I: The Electrocardiogram and Its Technology

the often profound alterations in waveforms that can result from precordial electrode misplacement.[85,86] A common error is superior misplacement of $V_1$ and $V_2$ in the second or third intercostal space. This can result in reduction of initial R-wave amplitude in these leads, approximating 0.1 mV per interspace, which can cause poor R-wave progression or erroneous signs of anterior infarction.[87] Superior displacement of the $V_1$ and $V_2$ electrodes will often result in rSr′ complexes with T-wave inversion, resembling the complex in lead aVR. It also has been shown that in patients with low diaphragm position, as in obstructive pulmonary disease,[88,89]

## Correct Lead Placement

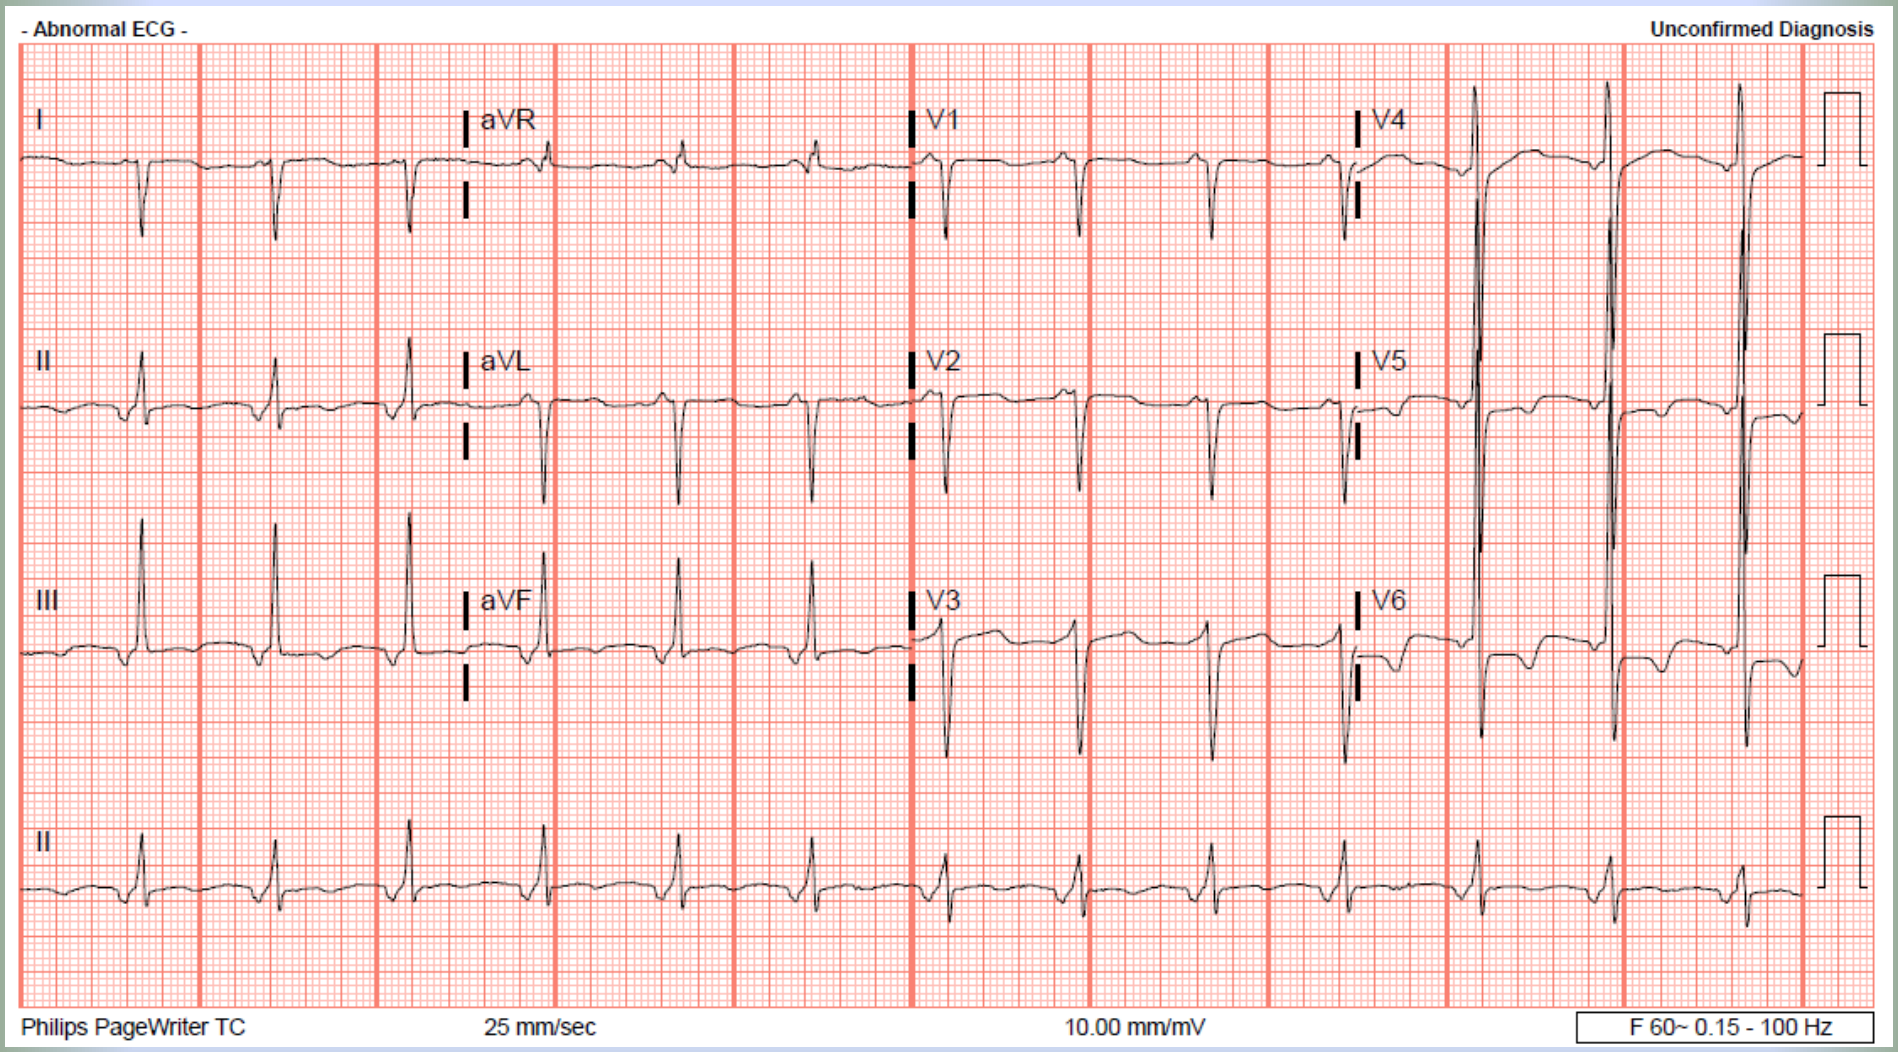
# P Wave Axis

- P waves with abnormal axis (“not pointing in the right direction”) may signify ectopic atrial beats.
- When P waves are inverted in most leads with an abnormally short P-R interval (<120ms) the origin of the rhythm may be the AV node (Junctional Rhythm).

# Inverted P waves & short P-R interval:

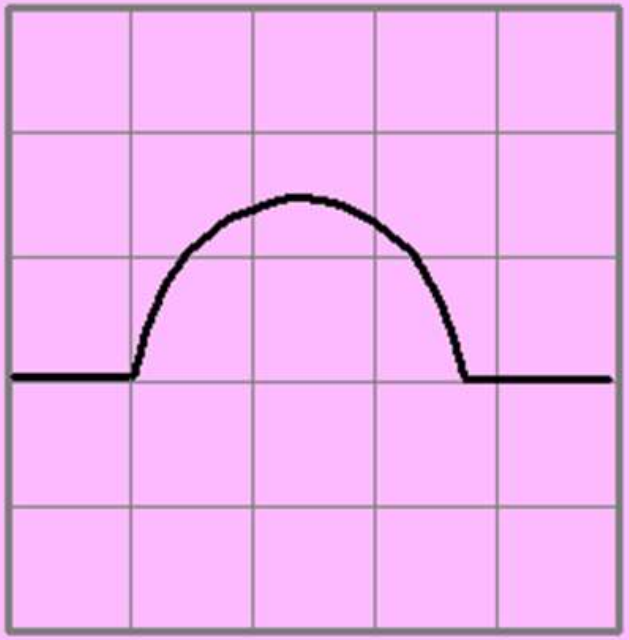


# Evaluate P Wave for Atrial  Hypertrophy

- Evaluate amplitude and duration in Lead II

# THE P WAVE

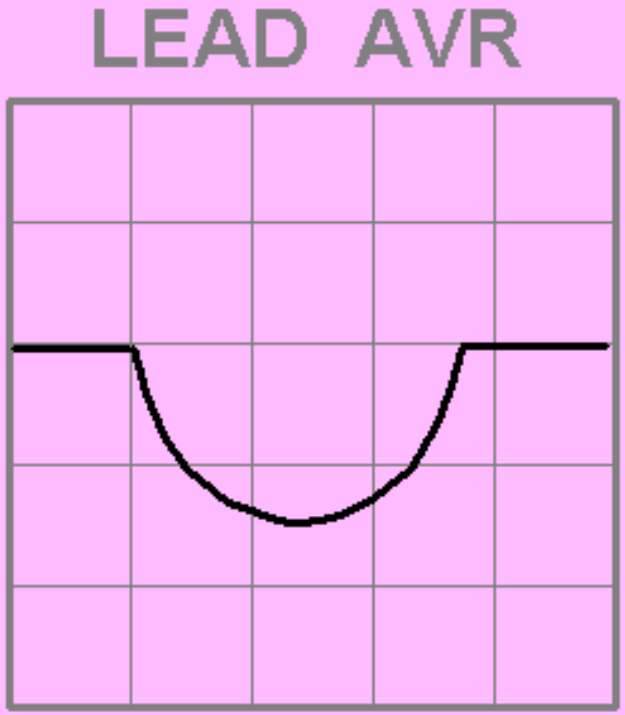
- SHOULD BE UPRIGHT, CONVEX-SHAPED DOME IN ALL LEADS EXCEPT AVR and V1



- SHOULD BE LESS THAN .2 mv (2 mm) HIGH
- SHOULD BE LESS THAN 100 ms (2.5mm) LONG

# THE P WAVE

- SHOULD BE INVERTED IN LEAD AVR



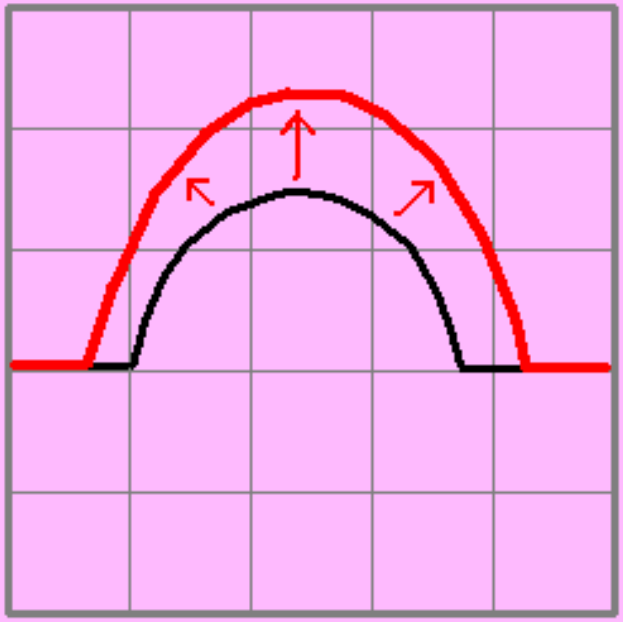
# THE P WAVE

When the P WAVE

is

***TOO LARGE***

We think of



***ATRIAL HYPERTROPHY***

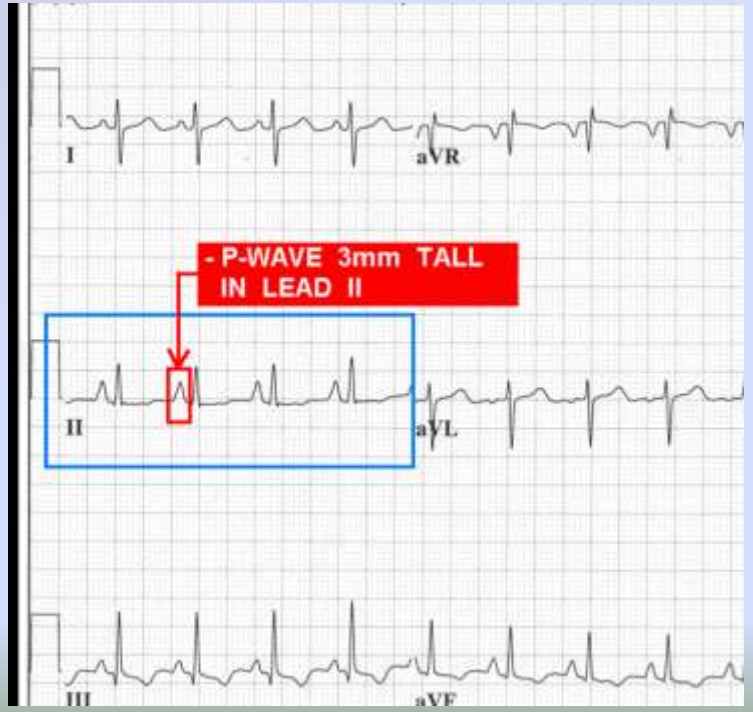
( SPECIFIC CRITERIA FOR ATRIAL HYPERTROPHY IS DISCUSSED IN MORE DETAIL IN THE "CHAMBER HYPERTROPHY" SECTION )

# Evaluate P Wave for Atrial Hypertrophy

- Evaluate amplitude and duration in ***Lead II***

# Evaluate P Wave for Atrial Hypertrophy

- Evaluate amplitude and duration in Lead II
- If the P wave it “too tall (>2mm) or too long (>2.5mm)” in Lead II, ***then go to Lead V1*** to evaluate P wave . . . .



# THE P WAVE

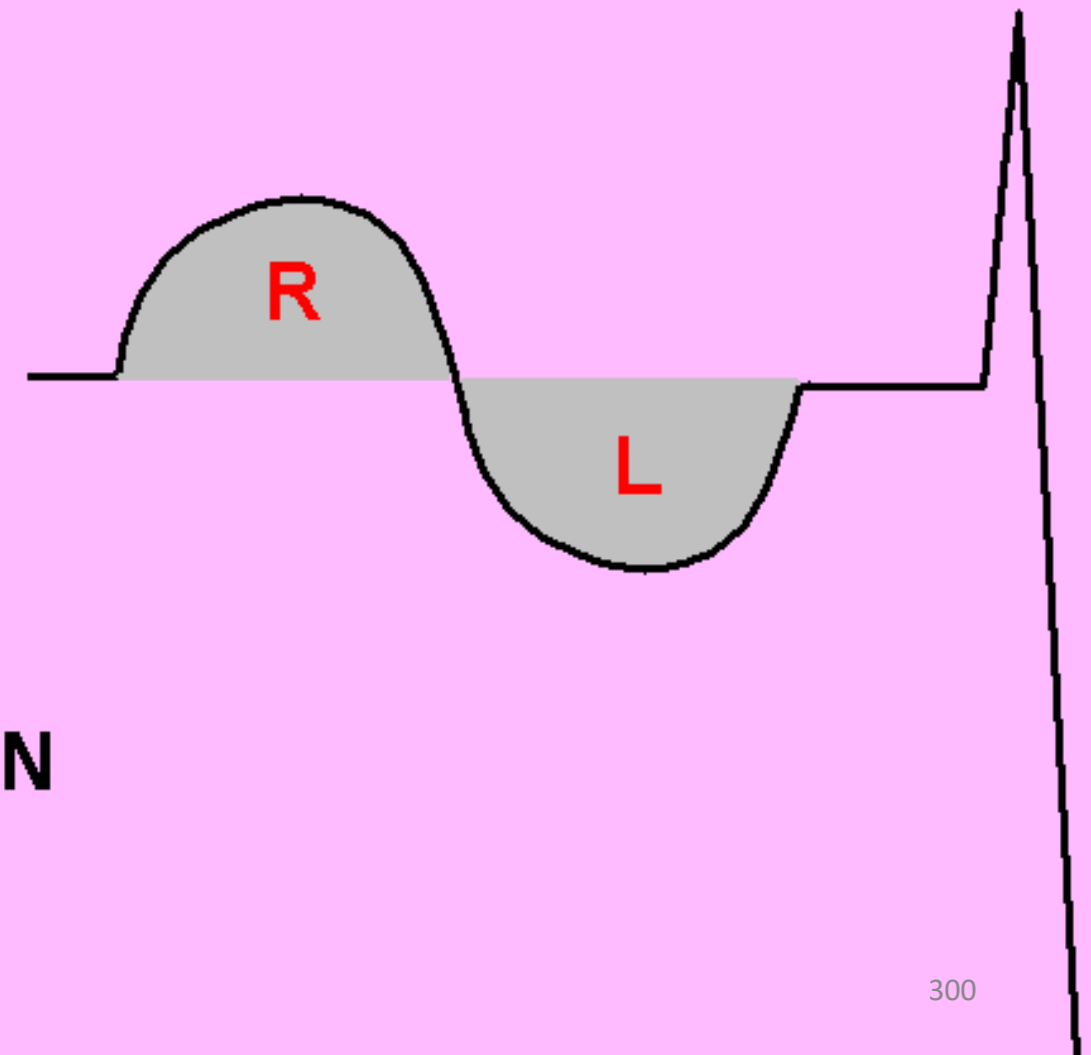
## IN LEAD V1 MAY BE:

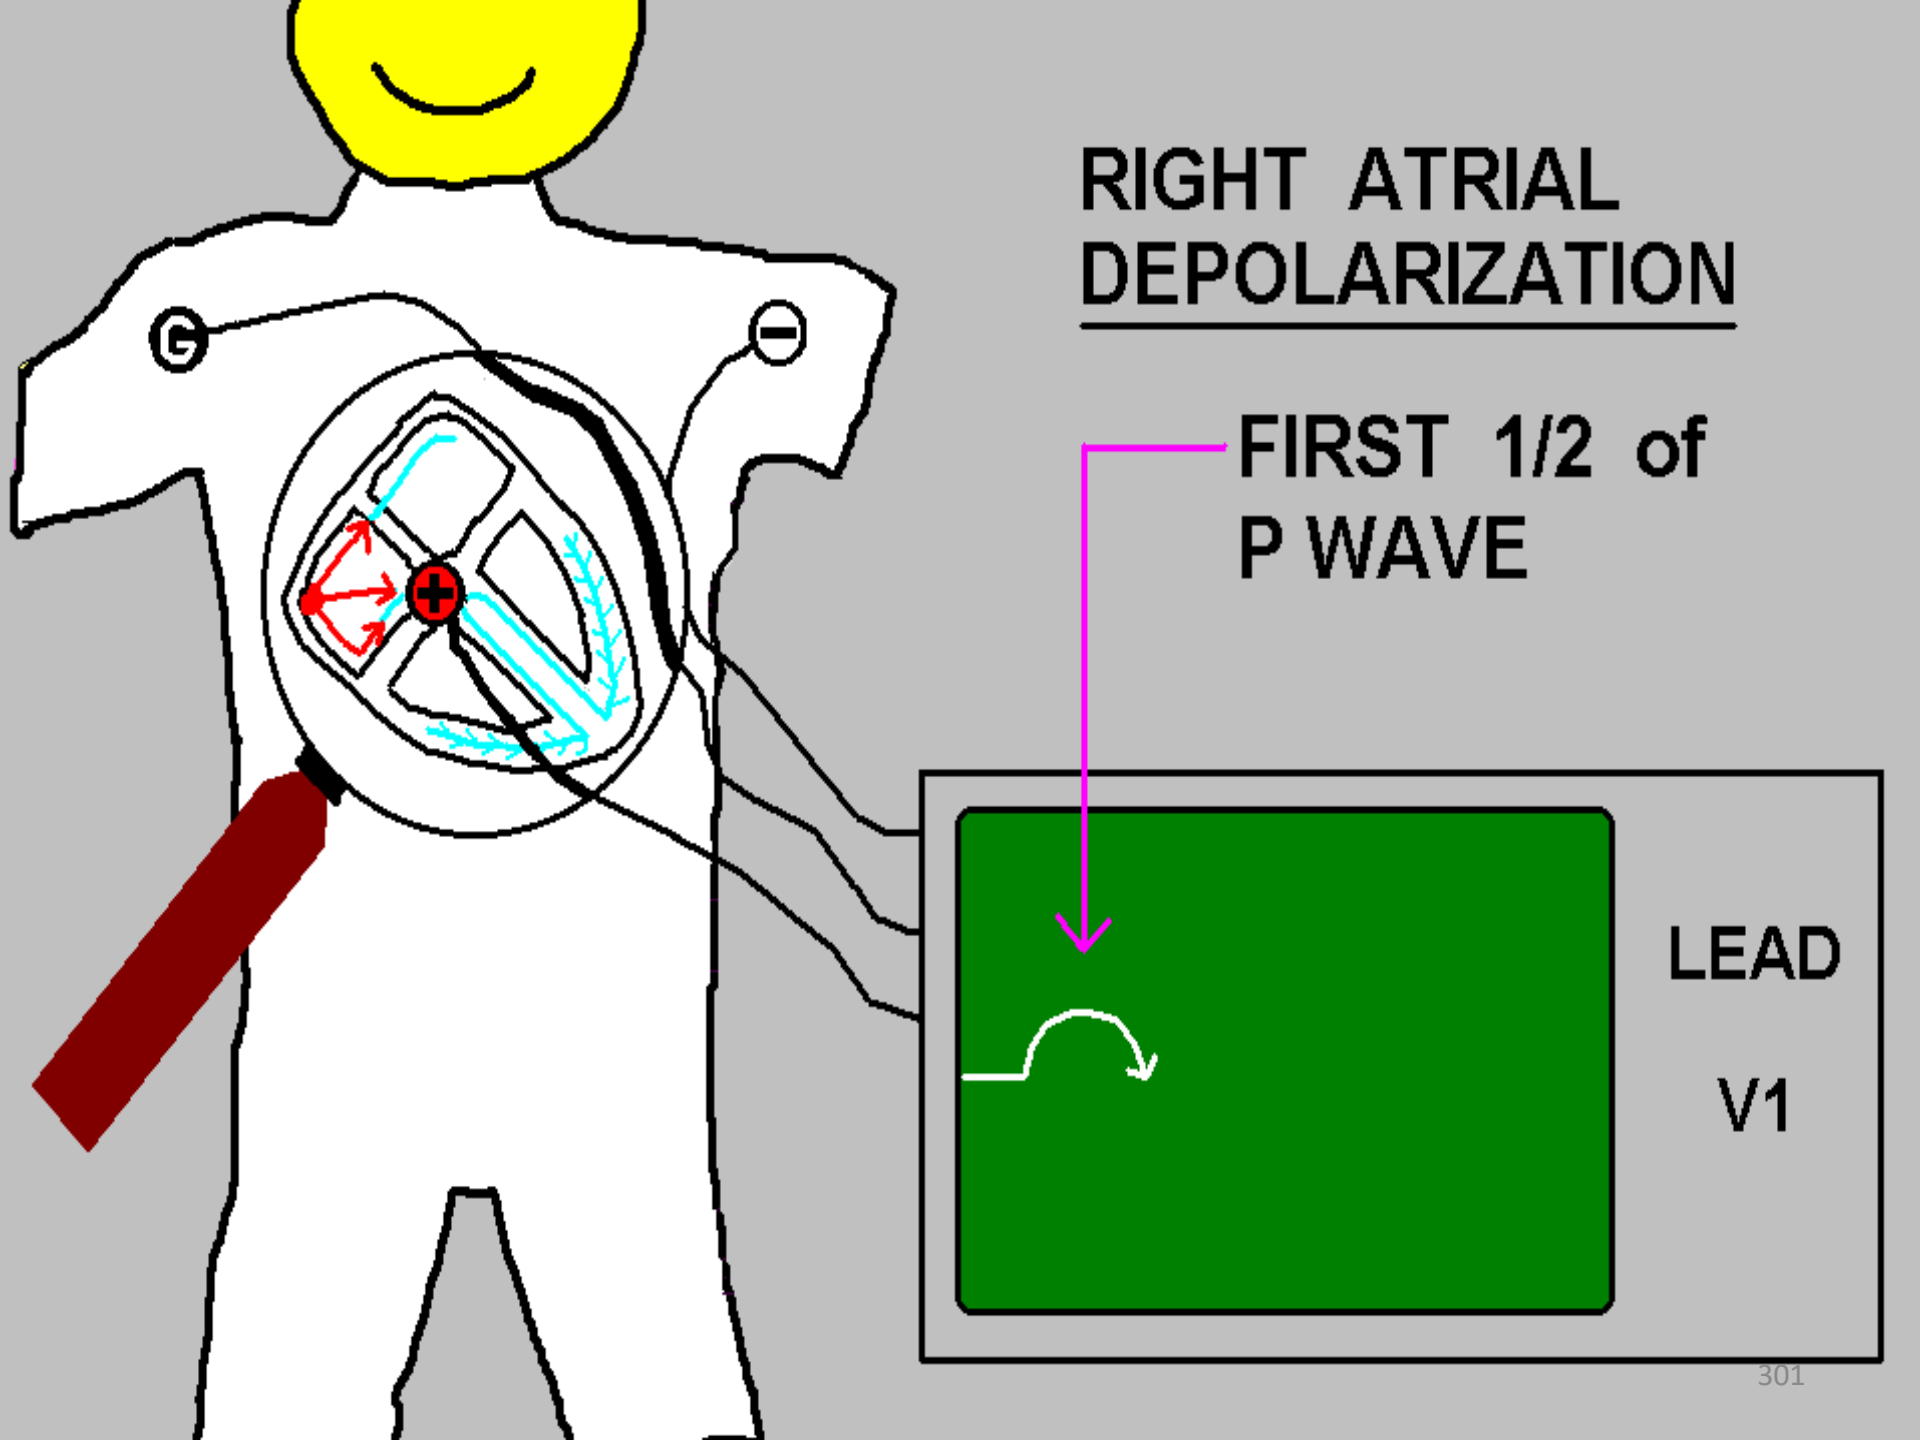
- POSITIVE

- OR BI-PHASIC

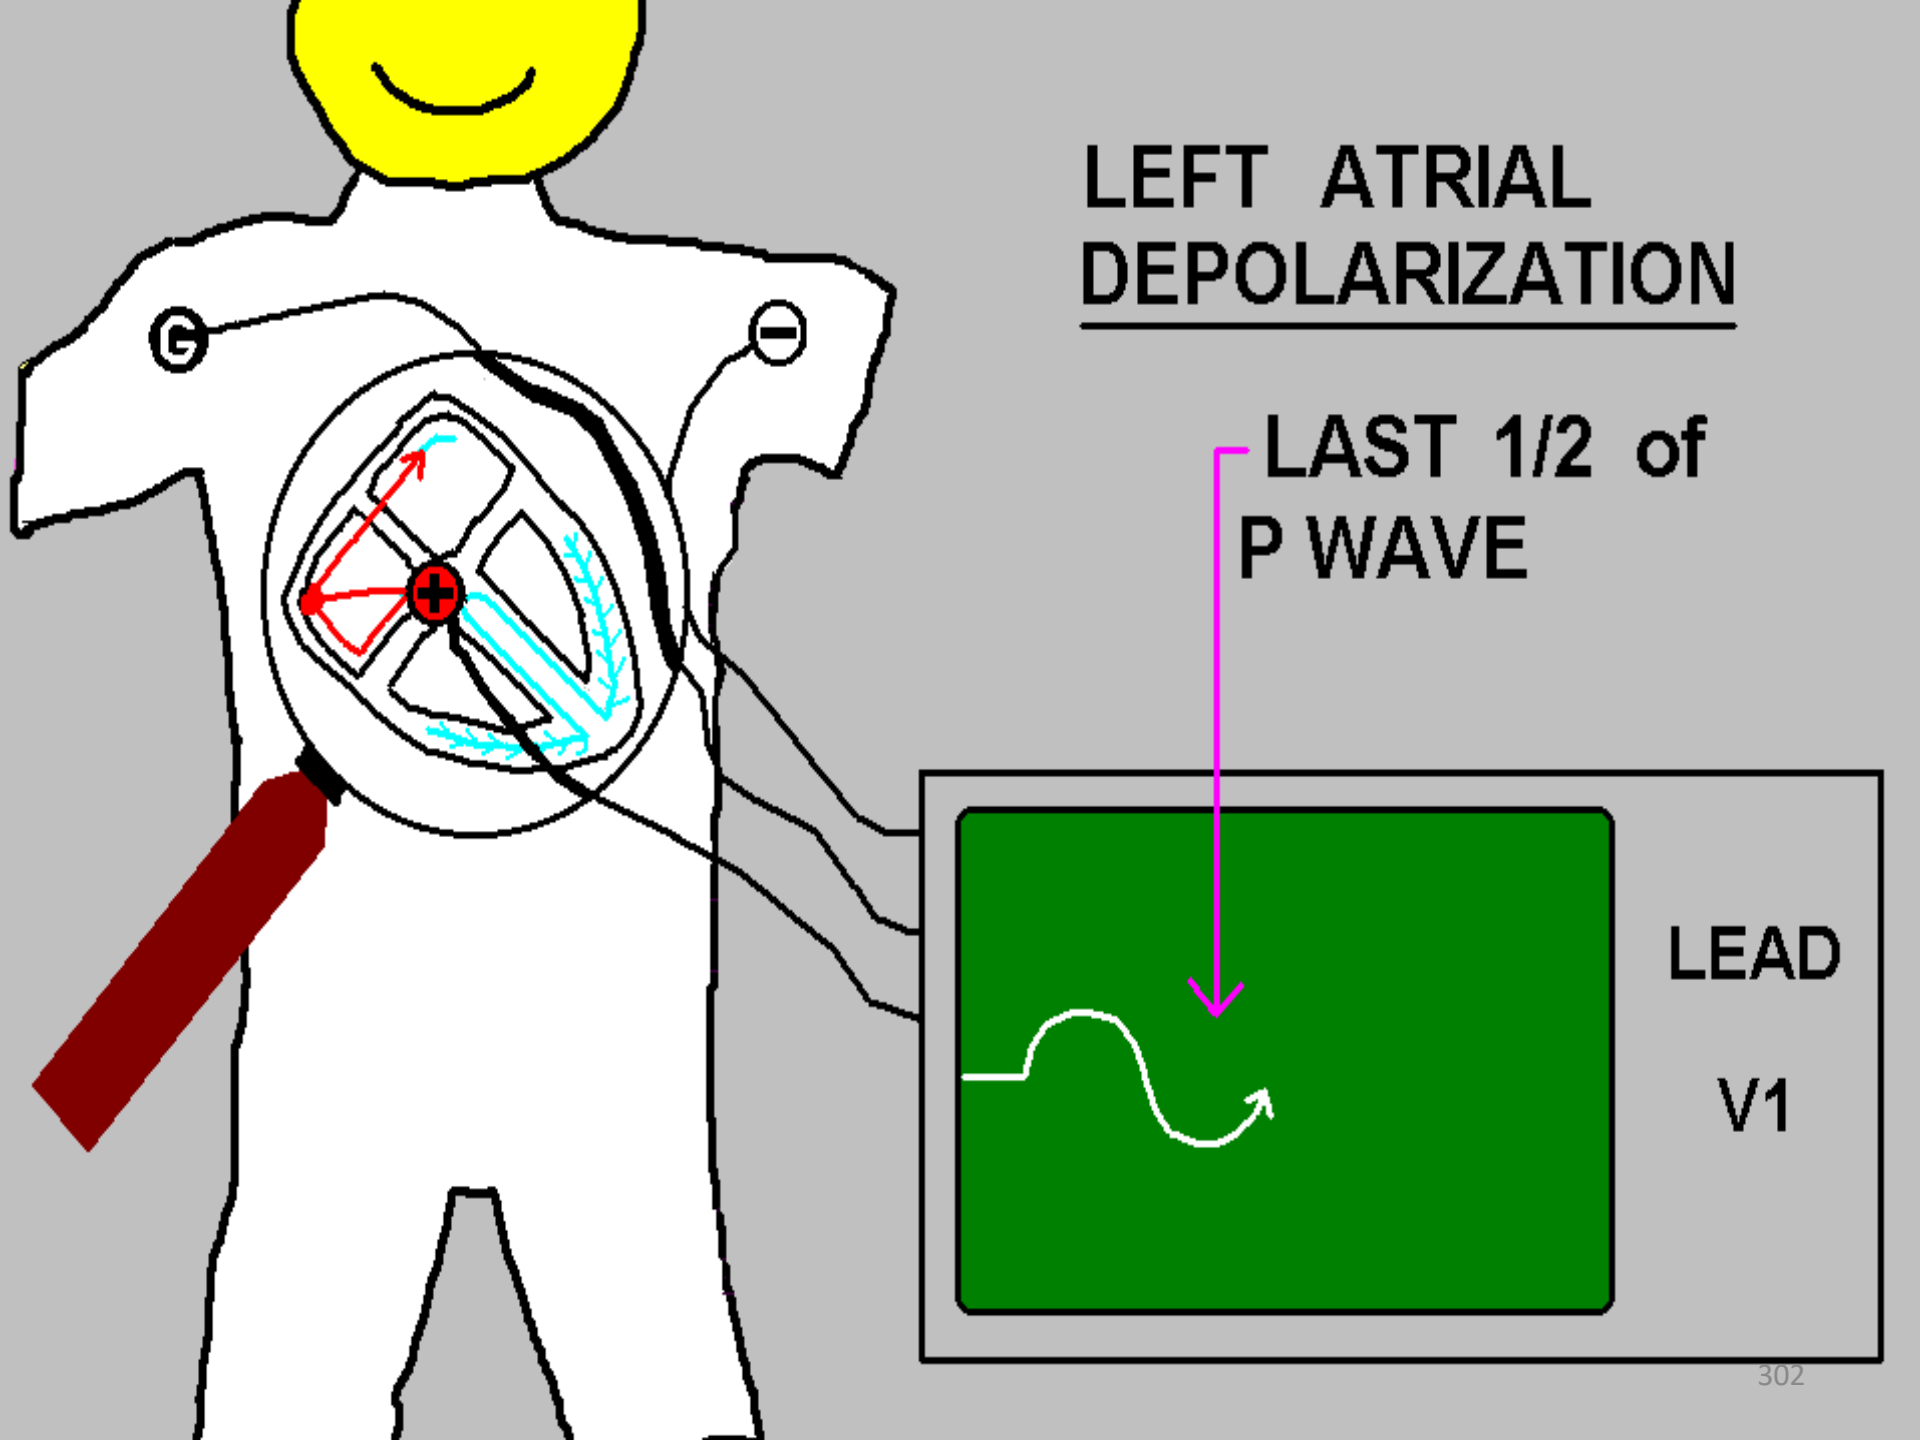
# THE P WAVE

- WHEN THE P WAVE IS BI-PHASIC IN V1, IT DISPLAYS BOTH R and L ATRIAL DEPOLARIZATION





RIGHT ATRIAL
DEPOLARIZATION
FIRST 1/2 of
P WAVE
LEAD
V1



LEFT ATRIAL
DEPOLARIZATION
LAST 1/2 of
P WAVE
LEAD
V1

# Evaluate P Wave for Atrial Hypertrophy

- Evaluate amplitude and duration in Lead II
- If the P wave it “too tall (>2mm) or too long (>2.5mm)” in Lead II, ***then go to lead V1*** to evaluate P wave.
- In Lead V1, if the first half (positive deflection) of the P wave is LARGER than the second half (negative deflection) it suggests RIGHT ATRIAL HYPERTROPHY (RAH).

# RIGHT ATRIAL ENLARGEMENT

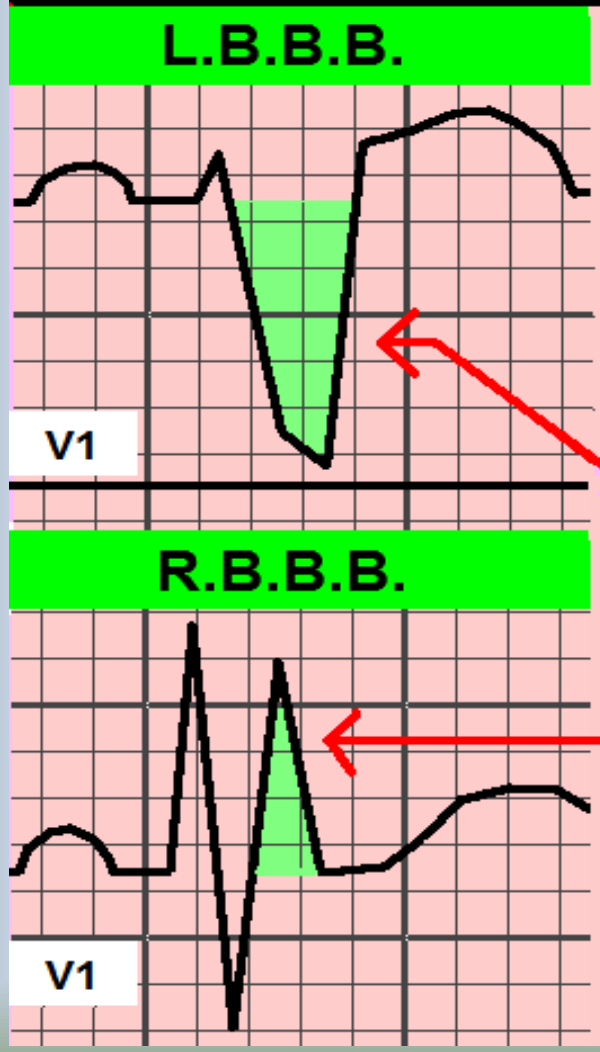
# “Terminal Phase of QRS Method”. . .

## DIAGNOSING BUNDLE BRANCH BLOCK



### USING LEAD V1

- QRS WIDER THAN 120 ms
- BEAT IS SUPRAVENTRICULAR IN ORIGIN
- TERMINAL PHASE OF QRS COMPLEX (LAST DEFLECTION)

NEGATIVE = LEFT BUNDLE BRANCH BLOCK

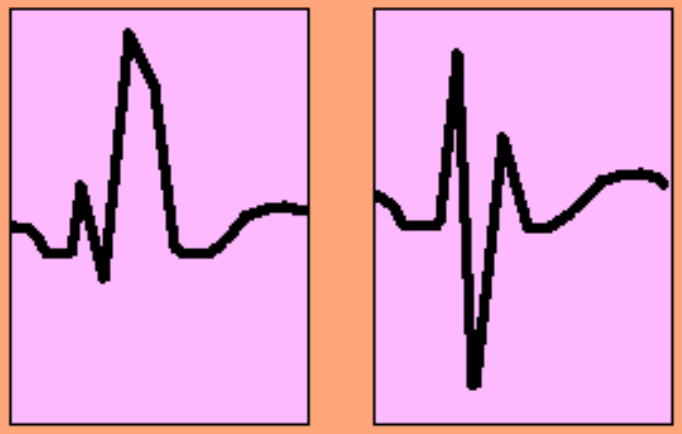
POSITIVE = RIGHT BUNDLE BRANCH BLOCK

# DIAGNOSING BUNDLE BRANCH BLOCK

## USING LEADS V1, V2, and V5, V6:

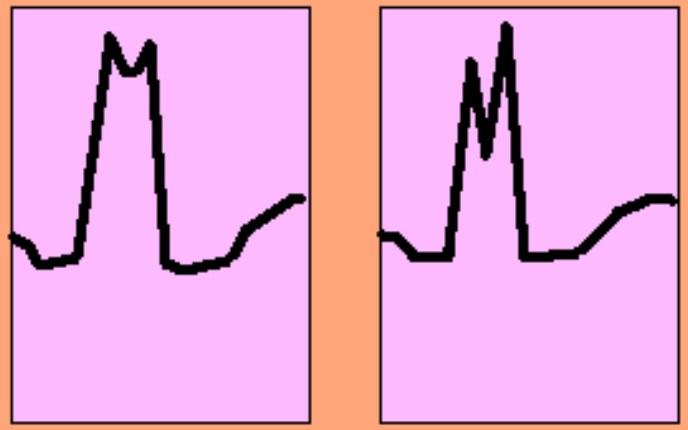
### LOCATING RsR' or RR' COMPLEXES:

V1 V2



RIGHT BUNDLE BRANCH BLOCK

V5 V6



LEFT BUNDLE BRANCH BLOCK

# THE QRS COMPLEX

## QRS HEIGHT

is a reflection of the QRS AMPLITUDE.

The NORMAL QRS AMPLITUDE varies from one lead to another . . .

# THE QRS COMPLEX

## QRS AMPLITUDE

is influenced by:

- age
- physical fitness
- body size
- conduction system disorders
- chamber hypertrophy

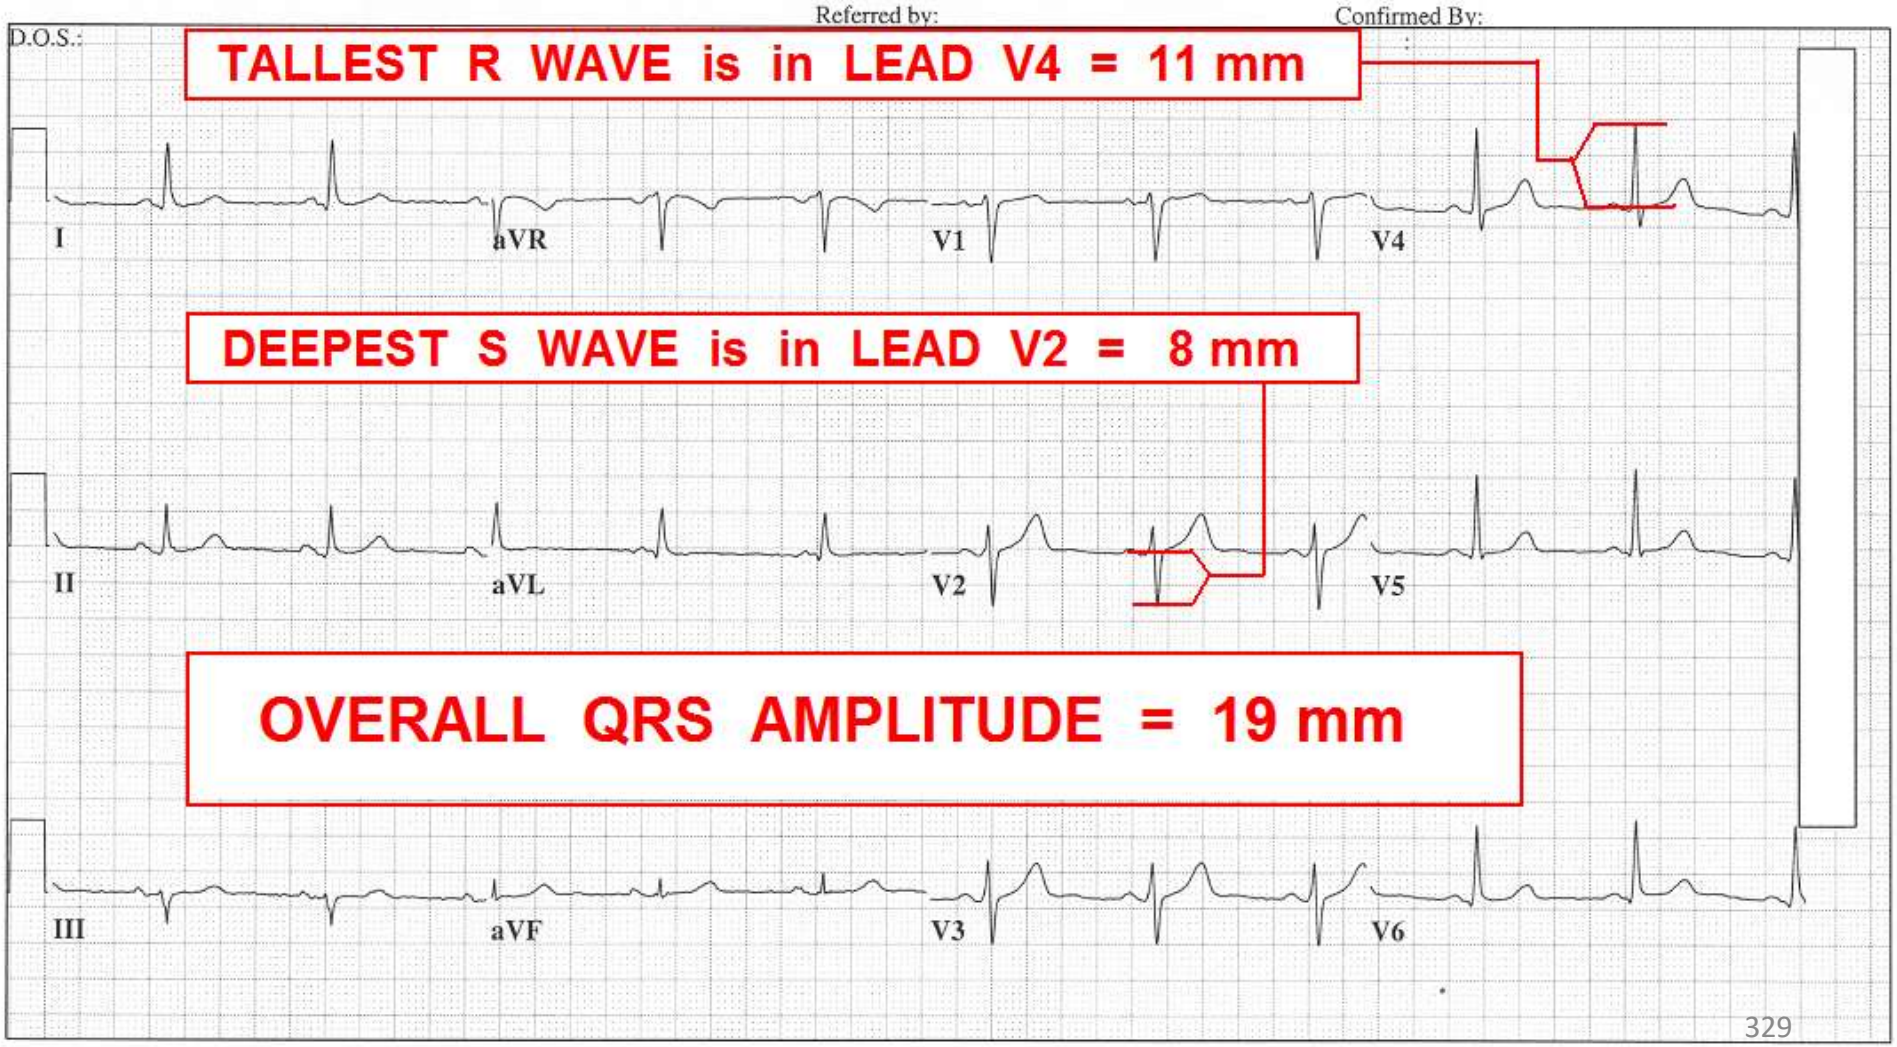
# THE QRS COMPLEX

## QRS AMPLITUDE

is measured by finding the TALLEST POSITIVE DEFLECTION ( R WAVE ) and the DEEPEST NEGATIVE DEFLECTION ( S WAVE ) on the 12 LEAD EKG and ADDING THE VALUES TOGETHER

# MEASURING THE "OVERALL QRS AMPLITUDE"

**Add the SIZE of the TALLEST R WAVE to the SIZE of the DEEPEST S WAVE . . . .**



# THE QRS COMPLEX

## QRS AMPLITUDE

**MAXIMUM NORMAL VALUES are difficult to define due to differences in PATIENT AGE, BODY SIZE, and FITNESS.**

**HOWEVER A GENERAL VALUE GUIDELINE IS: 3.0 mV ( 30 mm on normally calibrated EKG )**

# OVERALL QRS AMPLITUDE TOO HIGH:

## ( GREATER THAN 3.0 mV / 30 mm )

## THINK:

- VENTRICULAR HYPERTROPHY

# Hypertrophy “Cheats”:

- **WHEN QRS COMPLEX(ES) “SPEAR” OUTSIDE OF THEIR SPACE.**
- **WHEN QRS COMPLEXES SPEAR THROUGH OTHER LEADS ! . . . . . .**

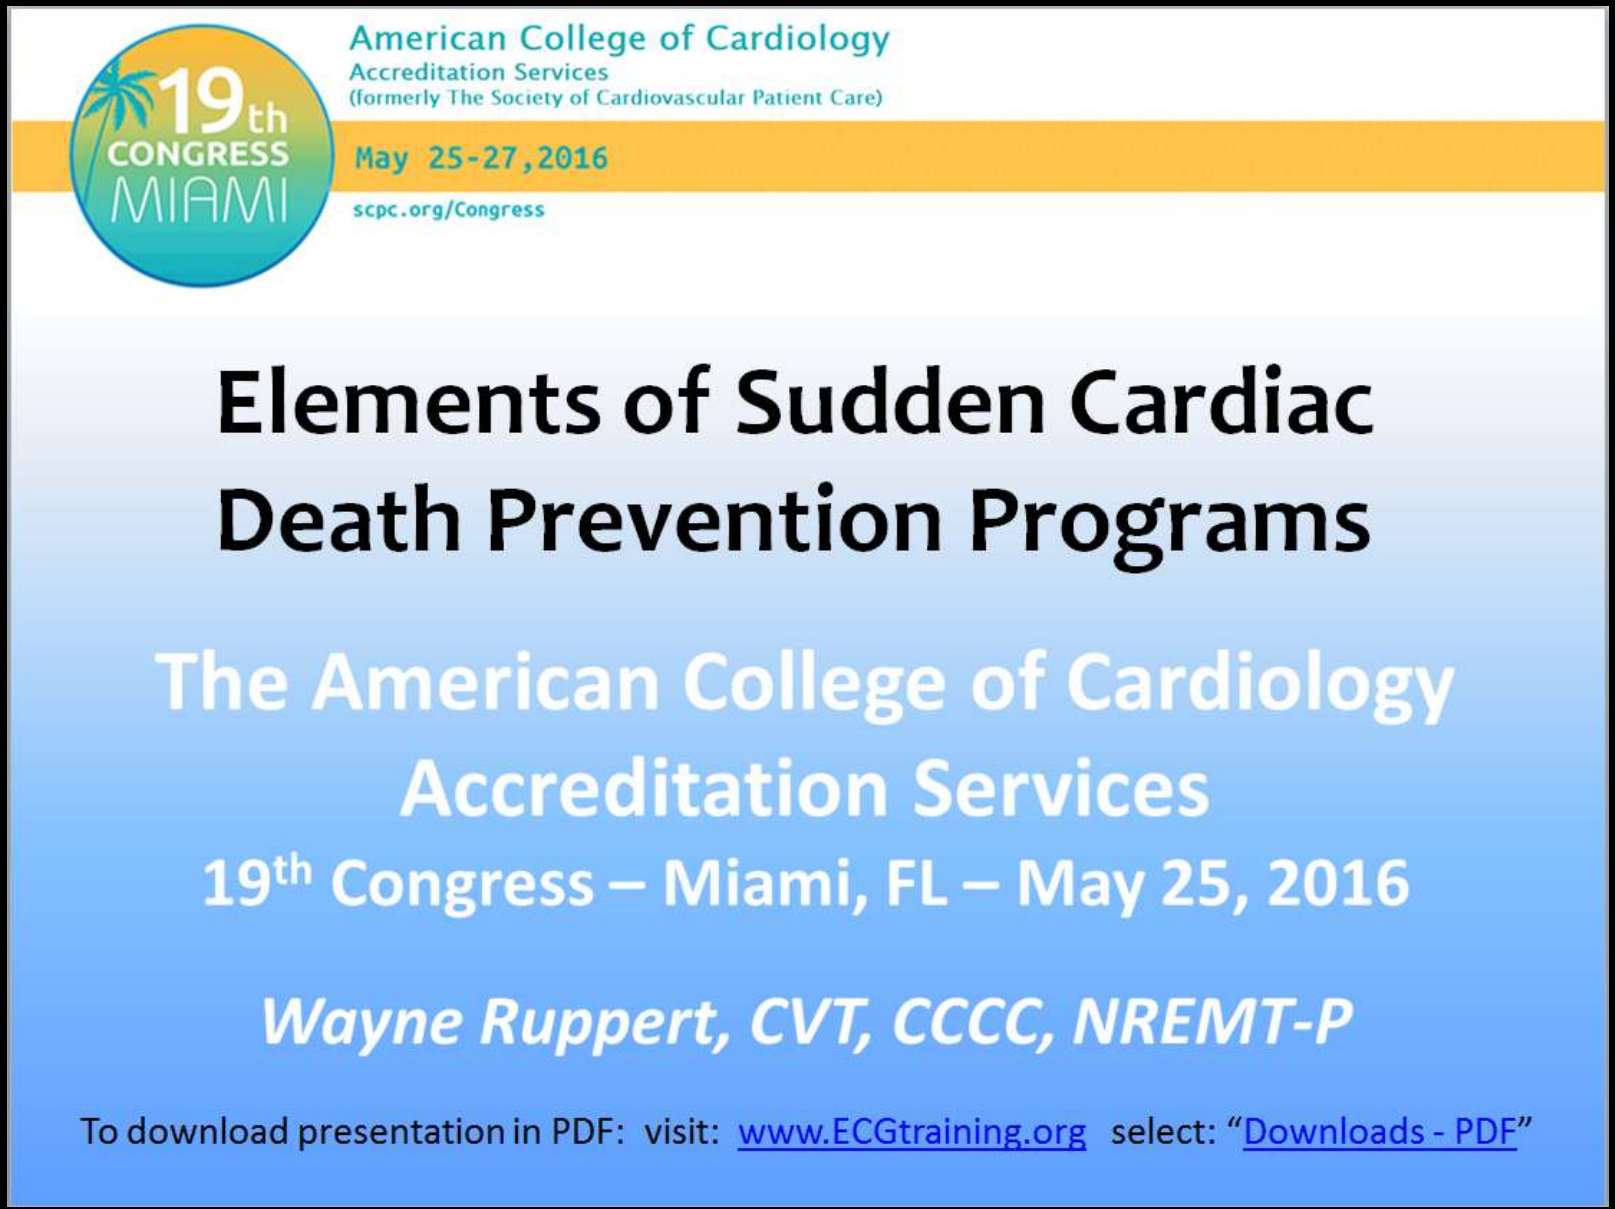
CLICK HERE to download "A SHORT Course in LONG QT Syndrome," a focused excerpt from:



Brief, focused ECG excerpts from the presentation given by Wayne Ruppert at the "19th Congress," American College of Cardiology Accreditation Services" national conference, on
MAY 25, 2016
Miami, FL …….

# Prevalence
# SADS Foundation Stats:

- Each year in the United States, 350,000 Americans die suddenly and unexpectedly due to cardiac arrhythmias. Almost 4,000 of them are young people under age 35. (CDC 2002)
- In 30%–50% of sudden cardiac deaths, it is the first clinically identified expression of heart disease
- 10-12% of Sudden Infant Death Syndrome (SIDS) cases are due to Long QT Syndrome.
- LQTS is now known to be 3 times more common in the US than childhood leukemia.
- 1 in 200,000 high school athletes in the US will die suddenly, most without any prior symptoms—*JAMA 1996; 276*

# The SADS Conditions:

- Hypertrophic Cardiomyopathy (HCM)
- Long QT Syndrome (LQTS)
- Short QT Syndrome (SQTS)
- Brugada Syndrome (BrS)
- Arrhythmogenic Right Ventricular Dysplasia (ARVD)
- Catecholaminergic Polymorphic Ventricular Tachycardia (CPVT)
- Wolff-Parkinson-White (WPW) Syndrome
- Commotio Cordis
- Less-common conditions (e.g. Marfans, Ehlers-Danlos, Loeys-Dietz Syndromes)

# Estimated SADS Prevalence in US Population:

- HCM: 1/500 *J Am Coll Cardiol*. 2014;64
- BrS: 1/2,500 SADS Foundation
- LQTS: 1/2,500 Lenhart,SE 2007 AHA Circ
- ARVD: 1/10,000 SADS Foundation
- CPVT: 1/10,000 US Nat'l Library of Medicine
- WPW: 1/1,000 Circulation.2011; 124: 746-757

# Prevalence

## Sudden Deaths in Young Competitive Athletes

B Maron et al; AHA Circulation.2009; 119: 1085-1092

**Analysis, causes of 1866 Deaths in the US, 1980 –2006:**

- **Cardiovascular: 56%**
- **Traumatic: 22%**
- **Commotio Cordis: 3%**
- **Heat Stroke: 2%**
- **Other: 17%**

**Most ACS Cardiac Arrest Patients are over age 30.**

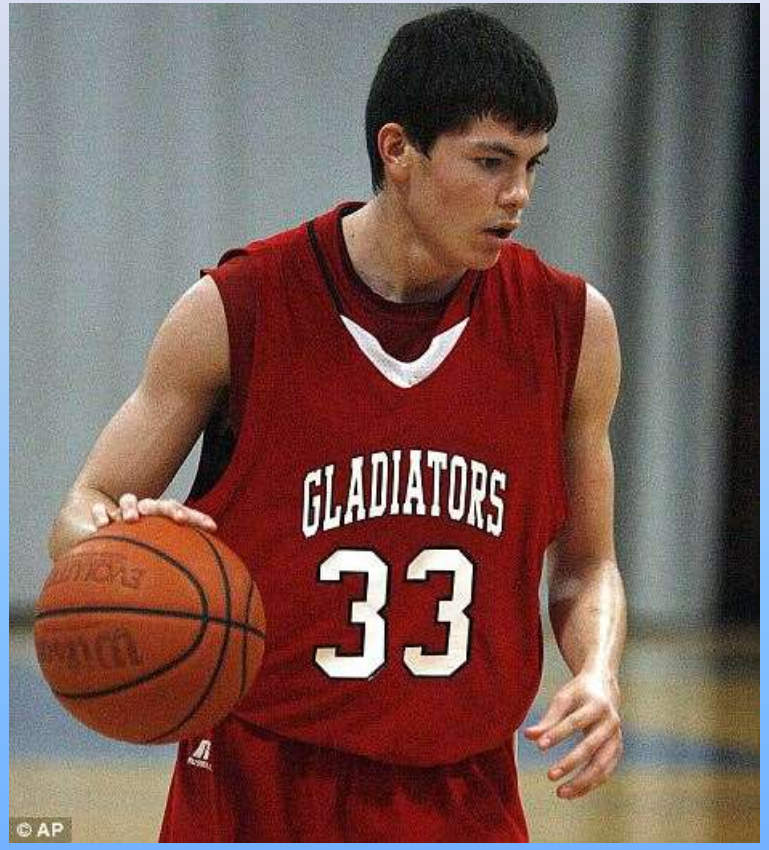
# High School Athlete Dies After Collapsing At Practice

August 15, 2011 11:28 PM

# Teen basketball player collapses and dies on court - third school boy sportsman to do so in less than a month



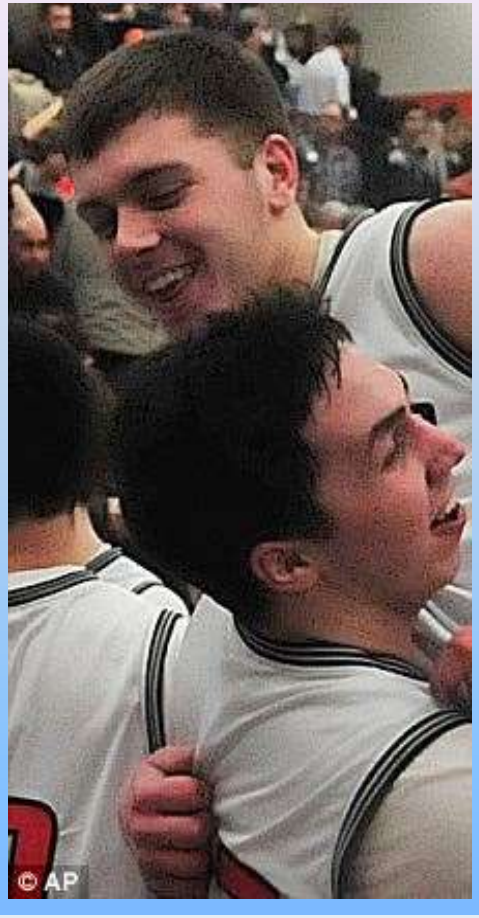
By DAILY MAIL REPORTER
UPDATED: 12:03 EST, 14 March 2011

A teenage basketball player has become the third school boy sports man in less than a month to collapse and die while playing.
Roma High School junior Robert Garza, 16, was playing in the AAU tournament on Saturday with the Hoopsters, a South Texas club team, when he collapsed without any warning.

His death follows that of Wes Leonard, who died of cardiac arrest from an enlarged heart on March 3 and

Matthew Hammerdorfer,17,
who collapsed after taking a tackle to the chest at a rugby match near Denver last week.

Sudden: The death of Robert Garza is the third such school boy death in the last month. The other two both had heart conditions



**Tragedy:** The death comes only weeks after that of Wes Leonard (right top) and Matthew Hammerdorfer, who collapsed after taking a school rugby match near Denver

**Ray-Pec student collapses and dies during track practice**

# Family and friends mourn popular Boonsboro High School athlete

**Michaela Grove 'was just a good kid that didn't follow the crowd, and people liked that'**

July 24, 2013|By DAVE McMILLION | davem@herald-mail.com

Family members and friends of a popular Boonsboro High School athlete are mourning her death after she collapsed at a camp in Mercersburg, Pa., on Monday evening.

Michaela Grove's mother, Brenda Grove, said she believes her 16-year-old daughter was involved in a tug-of-war competition at Camp Tohiglo when she fell to the ground in cardiac arrest.

## Greg Moyer, 15

Greg Moyer collapsed and died of sudden cardiac arrest while playing in a high school basketball game in East Stroudsburg, Pennsylvania. His school did not have a automated external defibrillator available and there were no nearby emergency medical services.

Afterwards, a nurse at the hospital emergency room suggested to Greg's parents that they start a fund to help locals schools get AEDs. The Moyers are now involved in AED projects statewide, and Greg's mother, Rachel Moyer, has traveled as far as Hawaii to advocate for school AED legislation and donate AEDs

**“Princess George” died at age 3 of sudden cardiac arrest brought on by an undiagnosed heart condition. At the suggestion of the doctor who saw “George” in the emergency room, her brother was subsequently tested for heart problems. He was diagnosed with a heart condition that is, fortunately, treatable.**

**Jennifer Lynn Balma, their mother, notes that “George” never showed any symptoms of cardiac problems — *until the day she suddenly stopped breathing.***

## Olivia Corinne Hoff, 14

Olivia died at age 14 from sudden cardiac arrest attributed to **Long QT Syndrome.** **The condition was undiagnosed. Olivia, a high school freshman involved in sports and cheerleading, suffered cardiac arrest during the night. Her mother found her unresponsive and called 911. Olivia was subsequently hospitalized, but did not survive.**

Her mother, Corinne Ruiz, wrote: **"Today, 6 years later, I cry for my daughter every day. Not a day goes by that I don't ask myself:** ***If only I had been told that there are screening tests or preventative treatments."***

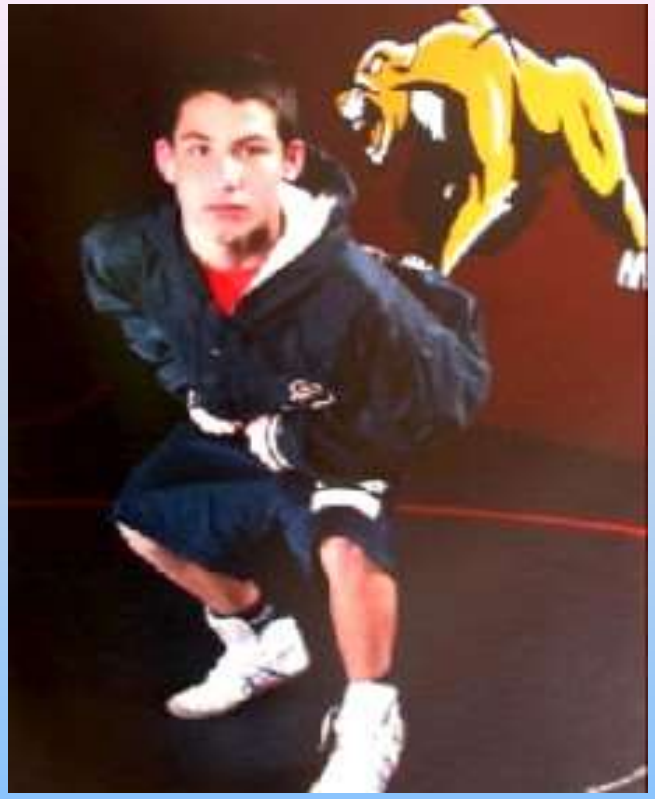
**High school quarterback Reggie Garrett threw his second touchdown pass of the night, walked off the field, and collapsed from sudden cardiac arrest. He died in the ambulance on the way to the hospital in West Orange, Texas.**

**In the news coverage following Garrett's death, Dallas station WFAA.com urged cardiac screening for high school athletes.**

## Zachary Shrah, 16

**High school football player Zachary Schrah collapsed and died of sudden cardiac arrest during football practice in Plano, Texas. His mother, Karen Schrah, has become an advocate for legislation mandating heart screenings as a part of student physicals.**

**Zachary's death had an impact on the community at large. Heart Hospital Baylor Plano now offers low-cost ECGs and echocardiograms for the area's student athletes.**



***Eric Paredes**, a two-sport high school athlete, had an enlarged heart. But no one knew about it until it was too late*. His father, Hector Paredes, found Eric on the kitchen floor, unconscious and not breathing. He administered CPR, but was unable to revive him. Eric died of sudden cardiac arrest.

In Eric's memory, the family has organized electrocardiogram (EKG) screening for other students at Eric's San Diego area high school.

**In 2005, Chicago conservationist and wildlife educator Max Schewitz died of sudden cardiac arrhythmia. Since then, the Max Schewitz Foundation, created by his parents, has provided free electrocardiograms (EKGs) for more than 10,000 Chicago-area students through a Screen for Teens program.**

**According to media reports, the screenings have identified 142 teens who are considered at-risk for sudden cardiac death because of cardiac conditions.**

**Nick Varrenti, 16**

**Nick Varrenti played in two high school football games — varsity and junior varsity — on Labor Day weekend. A day later, he suffered sudden cardiac arrest and died. His family learned later that Nick had lived with an undiagnosed heart condition, hypertrophic cardiomyopathy.**

**Nick's parents created the Nick of Time Foundation, which is dedicated to education schools, athletes, and communities about sudden cardiac arrest, public access defibrillator (PAD) programs, and cardiac screenings.**

# Jimmy Brackett, 22, and Crissy Brackett, 21

**The hereditary cardiac disease Long QT Syndrome ran in Jackie Renfrow's family, *but she had no idea about it until two of her children died from sudden cardiac arrest.***

# Brandon athlete dies after collapsing at practice

**TAMPA — A Brandon High School senior Milo Meeks died Saturday, one day after conditioning with the basketball team**

**“This is mind blowing,” said Ben Bromley, the junior varsity and assistant varsity basketball coach at Armwood.**

## Jeremy Grant Twining

TWINING, Jeremy Grant, 21, of Dade City, joined his savior Jesus in Heaven on Feb. 1, 2015. He was born May 31, 1993. He graduated from Pasco High School and was studying Criminal Justice at Liberty University. He is survived by his parents, John and Julie Twining of Dade City; siblings, Jonathan, Jessica and James Twining of Dade City; girlfriend, Lydia Tucker of Temple Terrace; paternal grandparents, Dave and Shirley Twining of Tampa; maternal grandparents, Edna Margaret Neatherly of Tampa and Earl and Ginger Hornsby of Cromwell, Conn.; and countless aunts, uncles, and cousins. Jeremy will always be remembered for his contagious laugh, his huge caring heart, and his love for his Lord and Savior Jesus Christ. A private graveside service was held Feb. 6 from the Florida National Cemetery in Bushnell. A memorial service was held at First Baptist Church of Dade City on Feb. 7. In lieu of flowers make send donations to the Sudden Arrhythmia Death Foundation at SADS.org. Hodges Family Funeral Home was in charge of arrangements.

# Athletes like Christian Eriksen can return after cardiac arrest, say experts

Kaya Burgess, Science Reporter

Saturday July 31 2021, 12.01am BST, The Times

Christian Eriksen gives a thumbs-up after his successful treatment following his collapse at the Euros
DFA VIA REUTERS

Athletes can "almost always" return to competitive sport after being diagnosed with a potentially deadly genetic heart condition and can even play again after suffering a cardiac arrest, scientists have found.

The research could be good news for Christian Eriksen, the Danish footballer who had to be resuscitated after his heart stopped during Denmark's Euro 2020 match with Finland last month.

## . . . . And on a more personal note:

**This slide added April 27, 2016:**

**Yesterday, a good friend of my step-daughter collapsed during a tennis game in the Carrollwood community of Tampa, Florida. She was 16 years old.**

**A physician bystander started CPR, but since no AED was available, she did not survive.**

**Sudden death was the first indication that she suffered from a cardiac condition. At the current time, her specific diagnosis is unknown.**

**Entry 5/2/2016: I was advised that the cause of cardiac arrest was Hypertrophic Cardiomyopathy.**

My step-daughter, Caitlin Cameron (right) with her friend, also named Caitlin (left) who collapsed and died during a tennis match on 4/26/16

*"Healthcare organizations have an obligation to implement programs, practices, protocols, policies and procedures designed to eliminate the needless mortality of SADS in our communities."*

*"Healthcare professionals who evaluate young patients have an obligation to be aware of risk factors, signs and symptoms of patients with potential SADS conditions. Those who read ECGs should be aware of the subtle ECG identifiers of SADS conditions."*

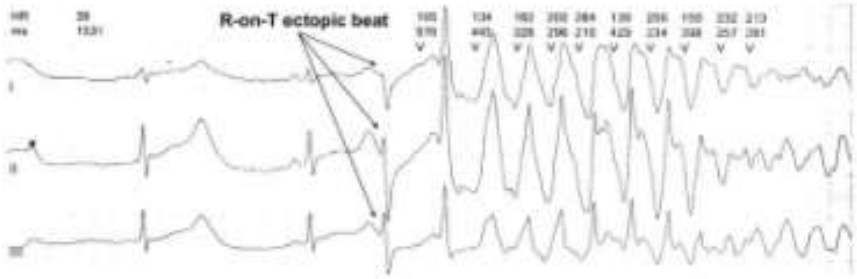
# Long QT Syndromes and Torsade de Pointes

Gan-Xin Yan

## I. Long QT syndrome: What every physician needs to know.



Long QT syndrome (LQTS) is an inherited disorder of delayed ventricular repolarization characterized by a prolonged QT interval on electrocardiography (ECG) and a propensity to torsades de pointes (TdP). TdP by definition is: (1) a polymorphic ventricular tachycardia that occurs specifically under conditions of QT prolongation; and (2) it is almost always initiated by R-on-T ectopic beats. Clinical manifestations of TdP include syncope (fainting), seizure (epilepsy), or sudden cardiac death. As shown in Figure 1, an episode of sustained TdP was recorded in a patient aged 13 years with LQTS type 2. The episode during which the boy had "seizures" was triggered by the alarm clock in the early morning.

Figure 1:

Torsade de pointes in a long QT syndrome type 2 patient.

**GENETICALLY ACQUIRED LONG QT SYNDROMES:**
ECG PATTERNS of 3 MOST COMMON VARIATIONS:

| Type | Current | Functional Effect | Frequency Among LQTS | ECG[12,13] | Triggers Lethal Cardiac Event[10] | Penetrance* |
|---|---|---|---|---|---|---|
| LQTS1 | K | ↓ | 30%-35% |  | Exercise (68%)<br>Emotional Stress (14%)<br>Sleep, Repose (9%)<br>Others (19%) | 62% |
| LQTS2 | K | ↓ | 25%-30% |  | Exercise (29%)<br>Emotional Stress (49%)<br>Sleep, Repose (22%) | 75% |
| LQTS3 | Na | ↑ | 5%-10% |  | Exercise (4%)<br>Emotional Stress (12%)<br>Sleep, Repose (64%)<br>Others (20%) | 90% |

## Etiology of Long QT Syndromes:

**Congenital** (14 known subtypes)

Genetic mutation results in abnormalities of cellular ion channels

**Acquired**

- Drug Induced
- Metabolic/electrolyte induced
- Very low energy diets / anorexia
- CNS & Autonomic nervous system disorders

**Miscellaneous**

- Coronary Artery Disease
- Mitral Valve Prolapse

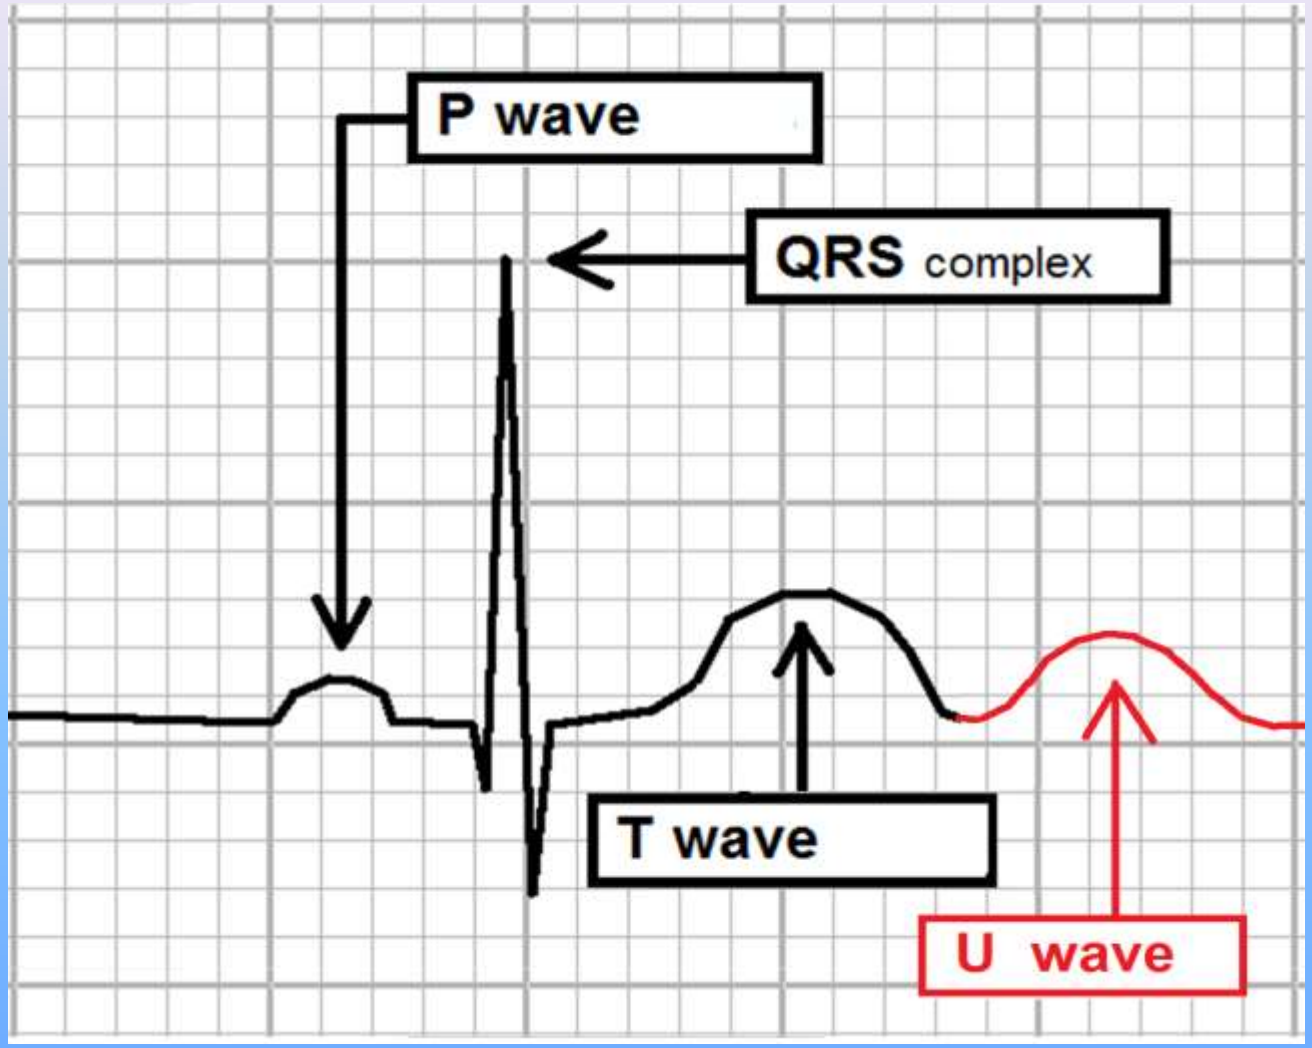
# U Waves

**Occasionally an extra wave is noted after each T wave.**

**It typically resembles**

***"a secondary T wave."***



**When present on the ECG, this "extra" waveform is referred to as a " U Wave."**

# U Waves . . .

- Common U wave Etiology:
  - **Hypomagnesemia***
  - **Hypokalemia***
  - **Hypercalcemia***
  - **QT prolonging medications***
  - **Increased intracranial pressure***
  - **Hypothermia***
  - **Digitalis** (usually *shortens* the QT Interval)

**** These are also causes of QT interval prolongation.***

# Abnormal U Waves

***INCLUDE the U Wave in the QT Interval measurement*** **when any one or more criteria are present:**

- **U wave 100% (or more) the size of the T wave.**
- **U wave is INVERTED (opposite polarity of T wave)**
- **U wave merged with the T wave**

**EVIDENCE SOURCE:**
**ACC/AHA/HRS Recommendations for the Standardization and Interpretation of the Electrocardiogram Part IV: The ST Segment, T and U Waves, and the QT Interval.**

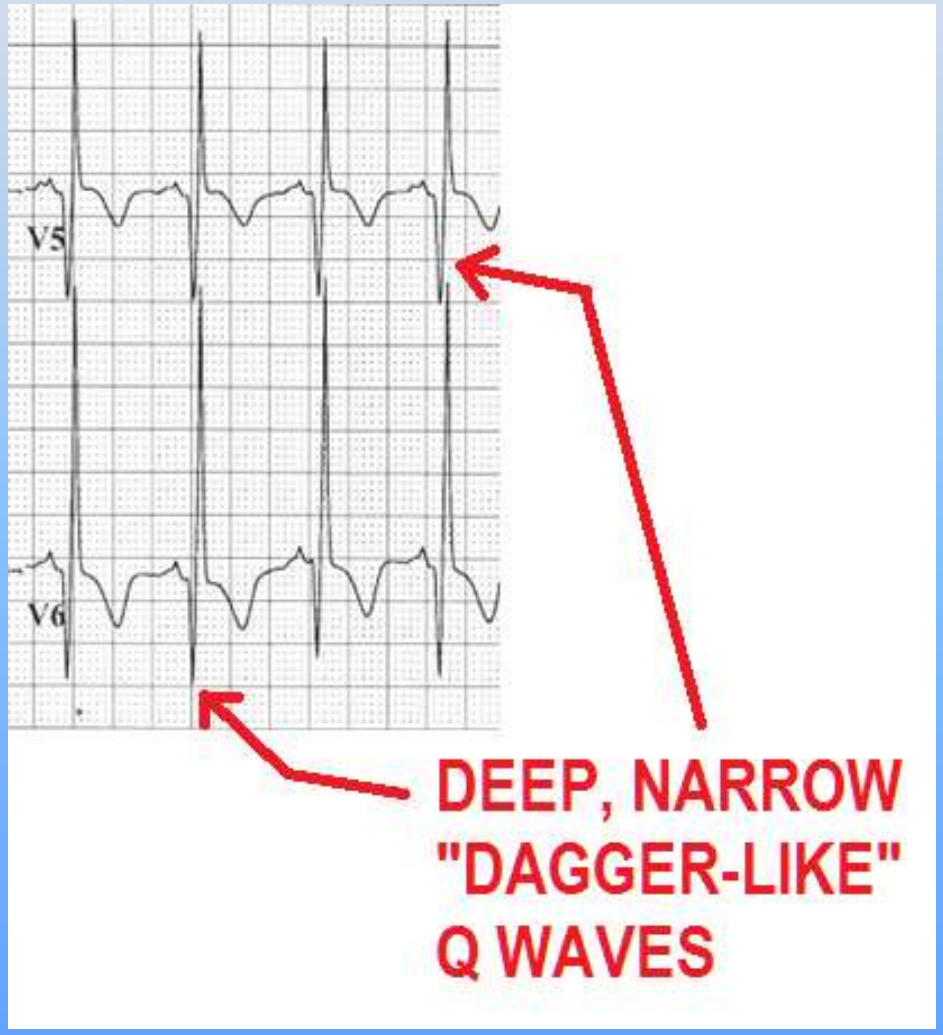
# ECG Indicators: Hypertrophic Cardiomyopathy

- ECG may be normal
- Deep, narrow (dagger-like) Q waves

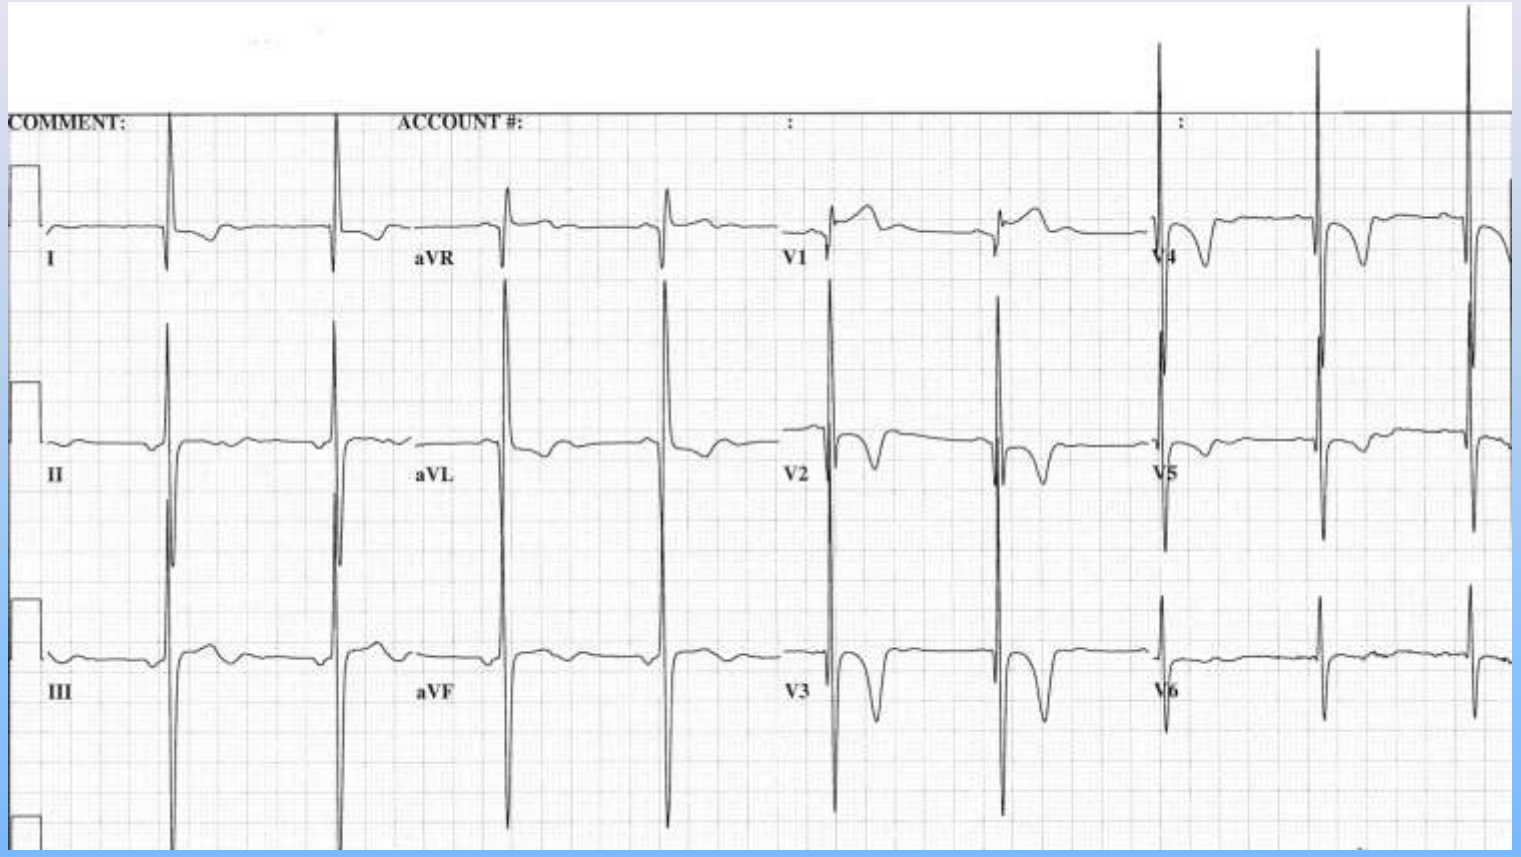
# ECG Indicators:
# Hypertrophic Cardiomyopathy



# ECG Indicators: Hypertrophic Cardiomyopathy

- ECG may be normal
- Deep, narrow (dagger-like) Q waves
- Inverted T waves in multiple regions
- Left Ventricular and possibly Left Atrial Hypertrophy

# Hypertrophic Cardiomyopathy (HCM)



**12 Lead ECG Traits:**

- **QRS Height -- exceeds normal size, "spearing through QRS" in other leads**
- **Inverted T waves appear in multiple regions (ANTERIOR, LATERAL )**
- **BiPHASIC T waves in Inferior Leads.**
- **T WAVES are SYMMETRICAL .**

# ECG Indicators: Brugada Syndrome

**IS THERE ANYTHING ABNORMAL WITH THIS EKG ?**

37 yr
Female Caucasian

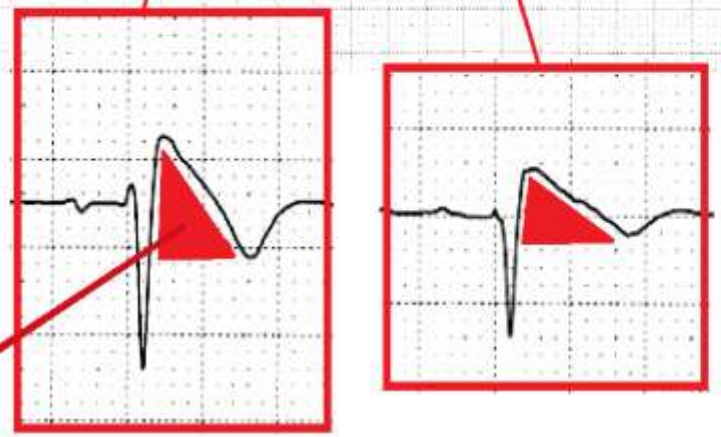
NOTE COMPUTER INTERPRETATION !

THIS PATIENT EXHIBITS A "CLASSIC" TYPE I BRUGADA SYNDROME ECG PATTERN:
- ELEVATED J POINTS IN V1, V2
- DOWNSLOPING "COVED" ST SEGMENT
- INVERTED T WAVE.



***NEVER FORGET THE "TRIANGULAR" SHAPE !***

# BRUGADA SYNDROME

1. RBBB PATTERN
2. J POINT ELEVATION V1, V2 and possibly V3
3. DOWNWARD SLOPING S-T SEGMENT
4. INVERTED T WAVE
5. GIVES S-T SEGMENT A "TRIANGULAR" APPEARANCE

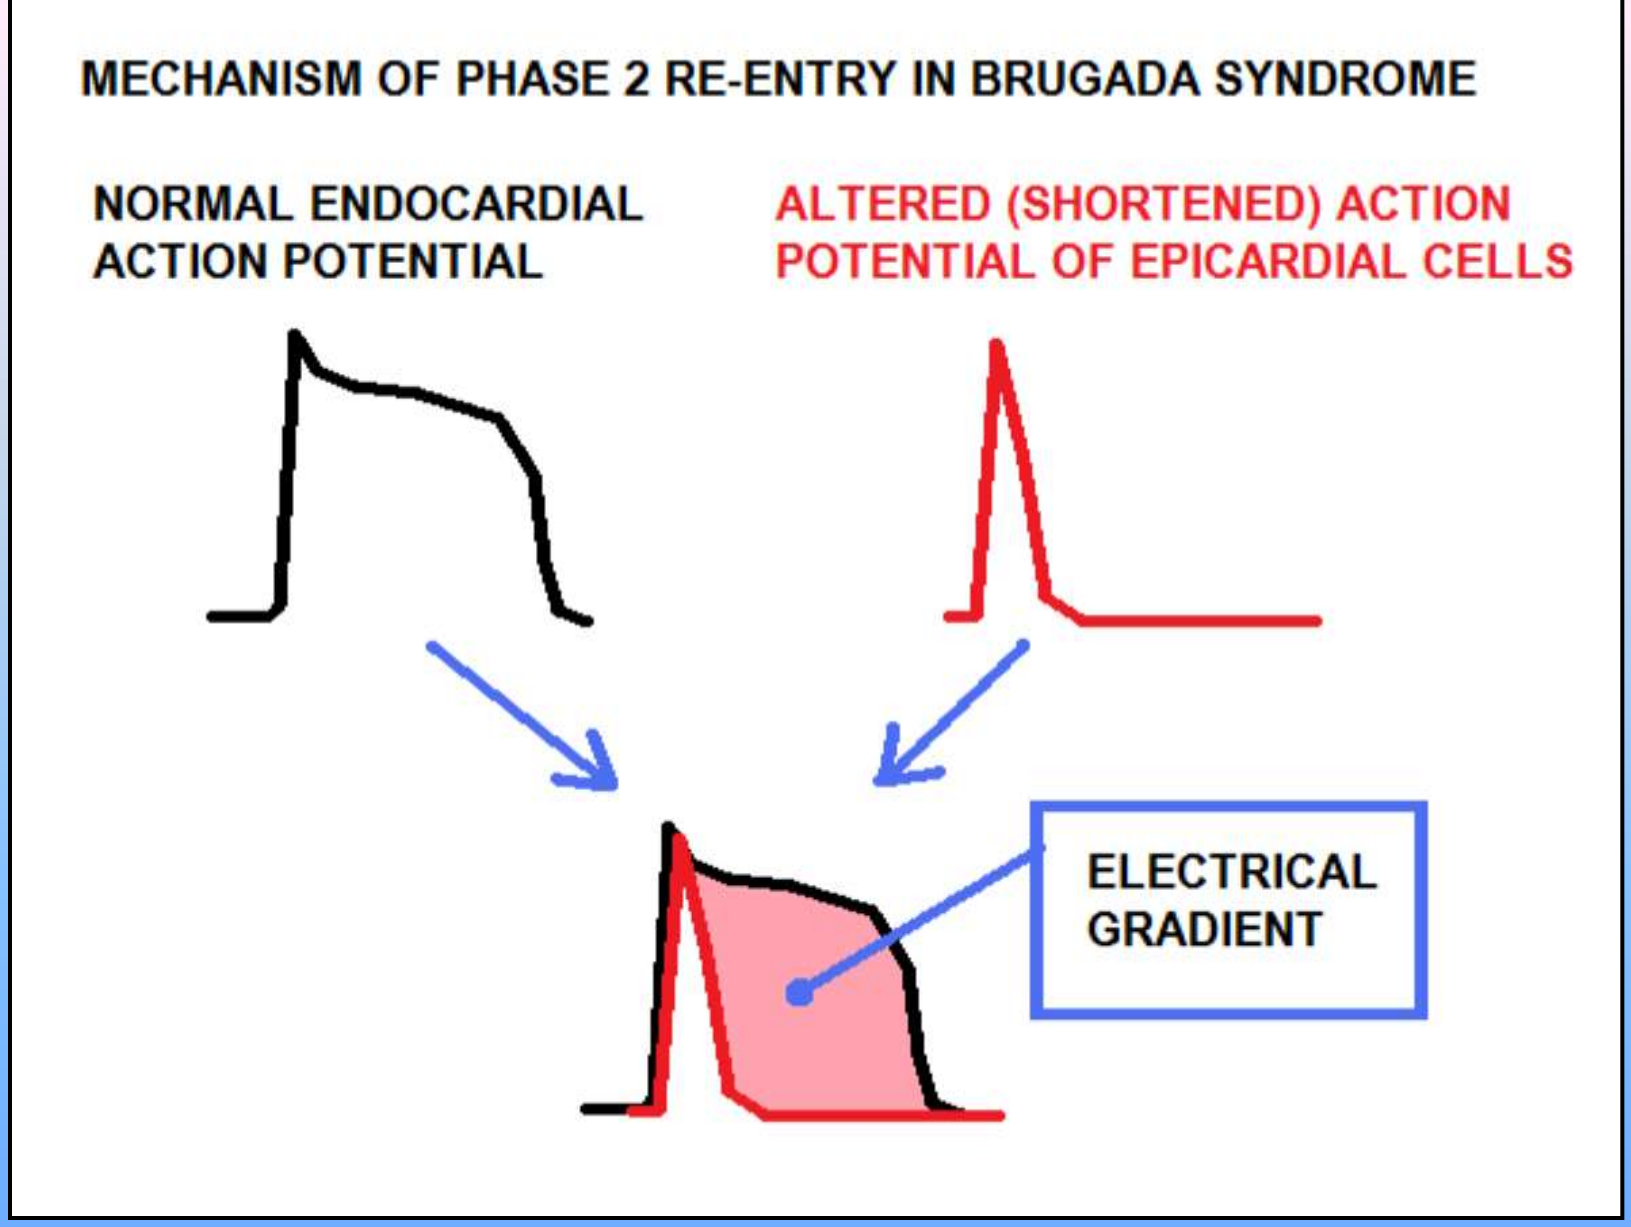
# PATTERNS of S-T ELEVATION :

## BEWARE of the

" TRIANGULAR "
SHAPED S-T SEGMENT
IN V1, V2, and some-
times also in V3 . . .

THINK - -

## BRUGADA SYNDROME



**Trigger for Torsades de Pointes – ECTOPIC BEAT during The "ELECTRICAL GRADIENT" phase shown above.**

# Brugada / Long QT Syndromes cause:

**Torsades de Pointes:**

- **Decreased – to – NO Cardiac Output**
- **Often patient PULSELESS during episode**
- **Causes SYNCOPE**
- **Often DETERIORATES into VENTRICULAR FIBRILLATION and CARDIAC ARREST.**

# TREATMENT OF TORSADES de POINTES per AHA ACLS 2015:

-TRANSIENT: MAGNESIUM SULFATE 1 – 2 gm IV infusion over 5 – 60 minutes.

-PERSISTENT, PATIENT UNSTABLE: DEFIBRILLATION

-CARDIAC ARREST: FOLLOW Ventricular Fibrillation Algorithm. Consider Mag Sulfate as your Antiarrhythmic of choice.

# WIDE COMPLEX TACHYCARDIA
## TORSADES de POINTES

( QRS > 120 ms )

**ABC s**

| NO PULSE | PULSE - UNSTABLE | PULSE - STABLE |
|---|---|---|
| GO TO V - FIB ALGORITHM ! | ▪ IMMEDIATE DEFIBRILLATION<br>START IV<br>CONSIDER SEDATION | ▪ O2 / IV / EKG<br>▪ MAGNESIUM INFUSION 1 - 2 gm OVER 5 - 60 min. |

***DO NOT give PROCAINAMIDE, AMIODARONE, or SOTALOL to patients with TORSADES or POLYMORPHIC VT !!!***

OTHER CONSIDERATIONS:

- EVALUATE BASELINE ECG RHYTHM FOR PRONGED Q-T INVERVAL.
- EVALUATE PATIENT'S MEDS FOR Q-T PROLONGING DRUGS
  . . . if PATIENT HAS BEEN RECEIVING ANY Q-T PROLONGING DRUGS, IMMEDIATELY DISCONTINUE AND CONTACT PHYSICIAN STAT.
- EVALUATE PATIENT HISTORY FOR PREVIOUS EVENTS OF "SYNCOPE OF UNKOWN ETIOLOGY"
- EVALUATE PATIENT FOR FAMILY HISTORY FOR SUDDEN CARDIAC DEATH

REPORT ANY ABNORMAL FINDINGS TO PHYSICIAN.

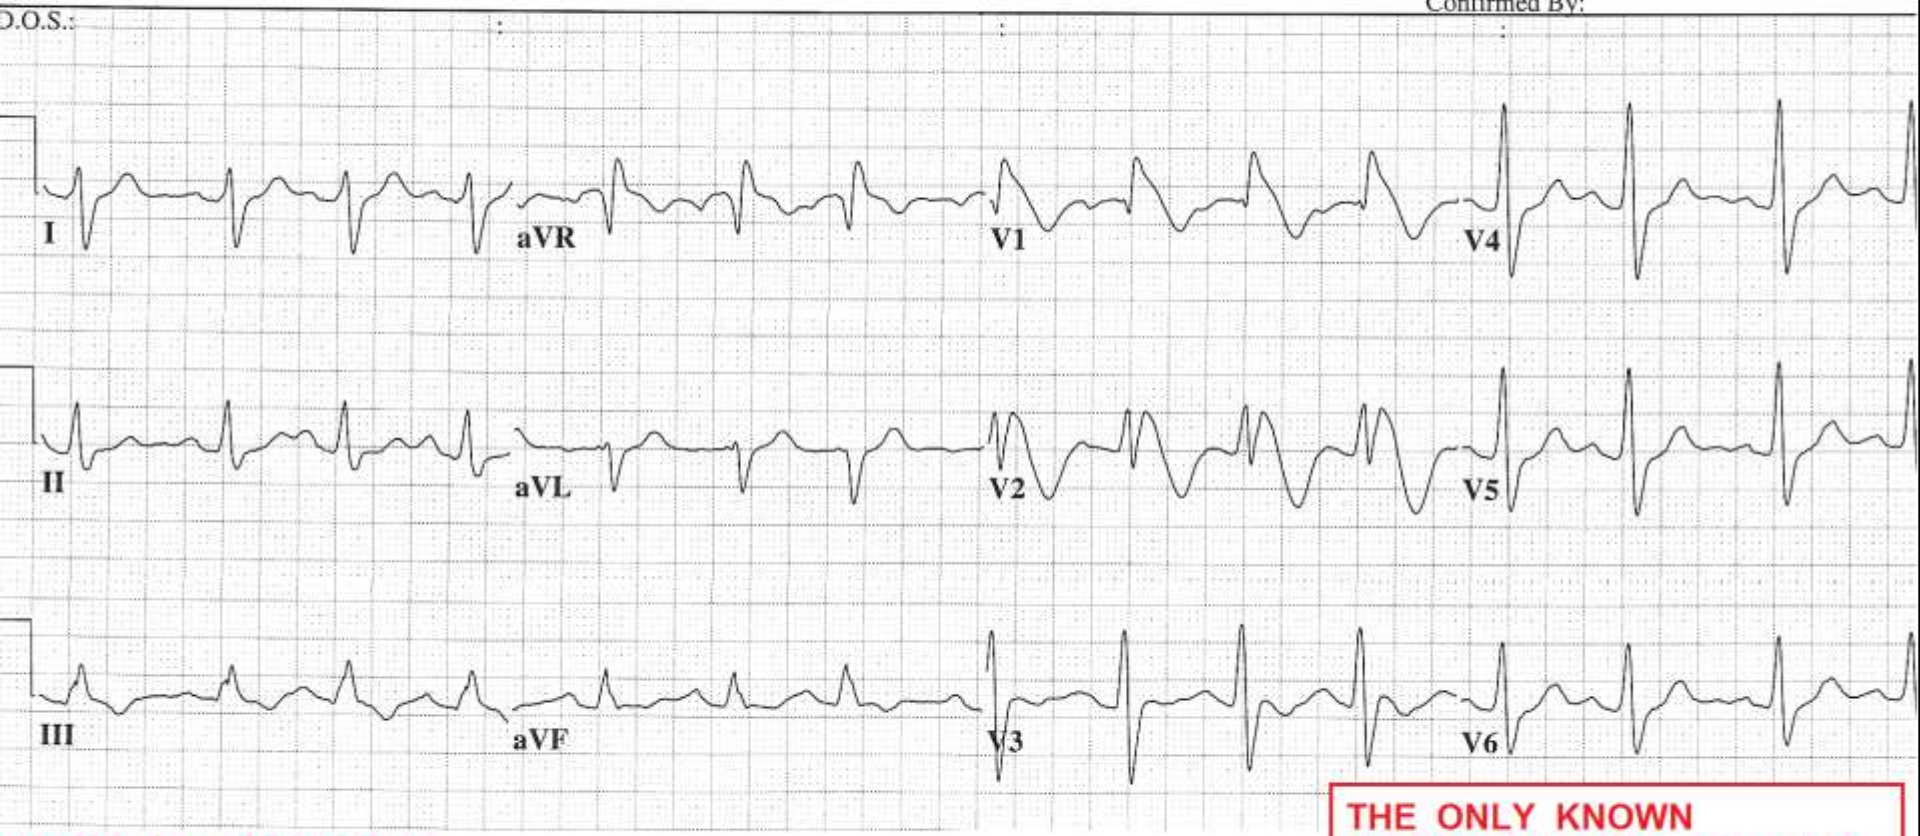
Confirmed By:



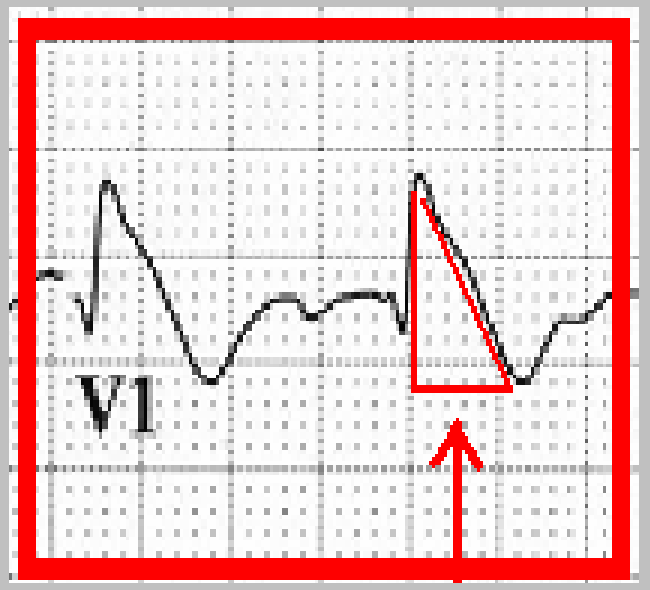
**BRUGADA SYNDROME.**

**PATIENT HAD HISTORY of SYNCOPE of UNKNOWN ETIOLOGY.**
**FAMILY HISTORY of SUDDEN DEATH of YOUNG, HEALTHY ADULTS.**
**VISIT: www.BRUGADA.org FOR MORE INFORMATION!**

**THE ONLY KNOWN TREATMENT FOR BRUGADA SYNDROME is IMPLANTATION of an ICD. THIS PATIENT HAD ICD IMPLANTED PRIOR TO HOSPITAL DISCHARGE.**

# BRUGADA SYNDROME

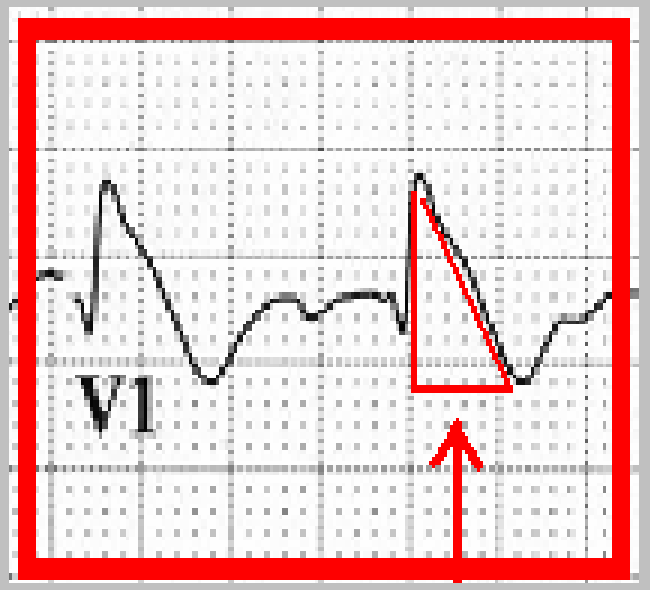
- GENETIC DISORDER - GENE SCN5A, which encodes CARDIAC SODIUM CHANNELS.
- CAUSES EARLY RIGHT VENTRICULAR SUB-EPICARDIAL REPOLARIZATION



- CAUSES RUNS OF TORSADES de POINTES, and SUDDEN DEATH from TORSADES and V-FIB.
- IS BELIEVED TO CAUSE 4 - 12 % of ALL SUDDEN DEATHS, and 50 % of ALL CARDIAC DEATHS where pt. has a STRUCTUALLY NORMAL HEART.

# BRUGADA SYNDROME

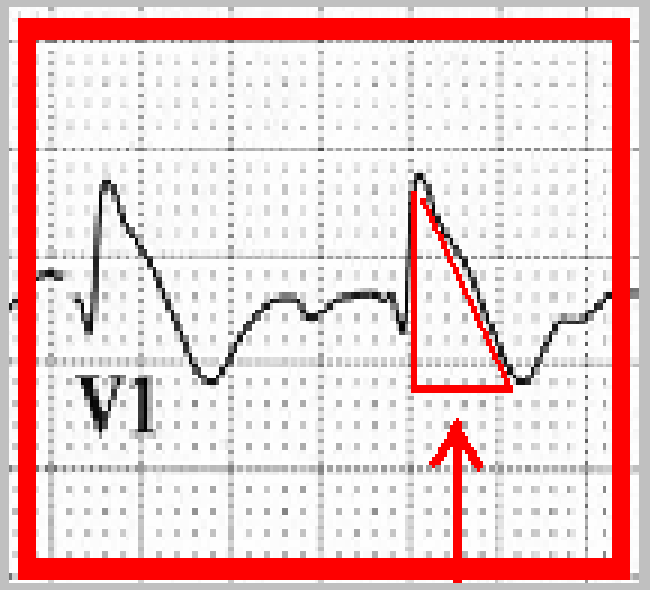
- SEVERAL VARIATIONS of this disorder are known to exist.
- CONCEALED and NON-CONCEALED.
- The NON-CONCEALED version HAS THE V1-V3 abnormality VISIBLE at all times.



- The CONCEALED version - pt. has a NORMAL EKG at most times - a DRUG STUDY, an EP STUDY, and / or GENETIC TESTING must be done to rule out or confirm diagnosis.

# BRUGADA SYNDROME

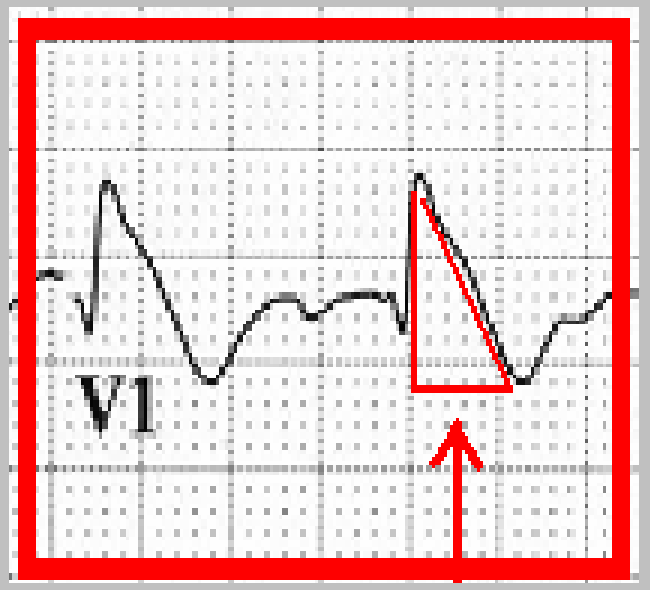
- YOUNG MALES of SOUTHEAST ASIAN DESCENT are in HIGH RISK GROUP, however this disorder affects ANY RACE or GENDER.



- BRUGADA SYNDROME is HEREDITARY.
- SUSPECT BRUGADA SYNDROME in patients with FAMILY HISTORY of BRUGADA / SUDDEN DEATH, and/or TORSADES.

# BRUGADA SYNDROME - TESTING

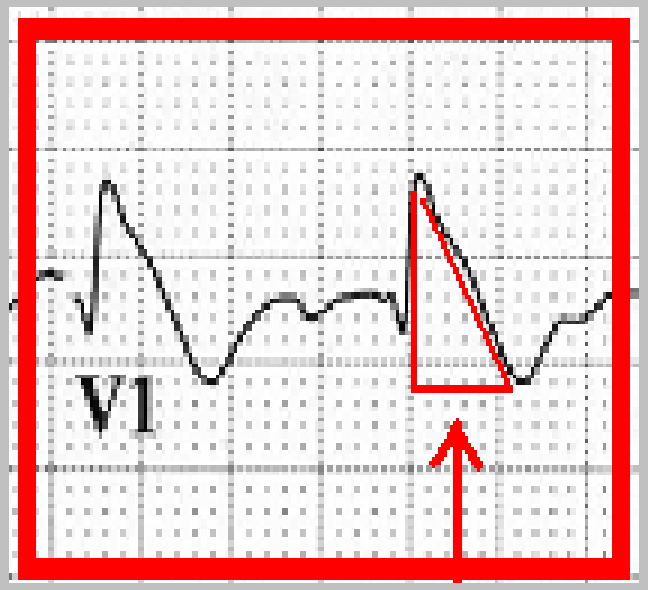
- For CONCEALED cases, a drug study of AJMALINE, FLECAINIDE, or PROCAINAMIDE can UNMASK the "tell-tale" TRIANGULAR COMPLEXES of V1 and V2.



- IN EP STUDIES, a PROLONGED H-V INTERVAL may be observed.
- GENETIC TESTING is performed by THE RAMON A. BRUGADA FOUNDATION.

# BRUGADA SYNDROME - TREATMENT

ICD implantation is the only known effective treatment to date.



www.BRUGADA.org

# Arrhythmogenic Right Ventricular Dysplasia

- **A genetically acquired myocardial disease associated with paroxysmal ventricular arrhythmias and sudden cardiac death.**
- **Characterized pathologically by fibro-fatty replacement of the right ventricular myocardium.**
- **The second most common cause of sudden cardiac death in young people (after HOCM), causing *up to 20% of sudden cardiac deaths in patients < 35 yrs of age*.**
- **Typically inherited as an autosomal dominant trait, with variable penetrance and expression (there is an autosomal recessive form called Naxos Disease, which is associated with woolly hair and skin changes).**
- **More common in men than women (3:1) and in people of Italian or Greek descent.**
- **Estimated to affect approximately 1 in 5,000 people overall.**

From: 2014 ACC/AHA Guideline on Perioperative Cardiovascular Evaluation and Management of Patients Undergoing Noncardiac Surgery: A Report of the American College of Cardiology/American Heart Association Task Force on Practice Guidelines

## Arrhythmogenic Right Ventricular (RV) Cardiomyopathy and/or Dysplasia:

**In 1 autopsy study examining a series of 200 cases of sudden death associated with arrhythmogenic RV cardiomyopathy and/or dysplasia, death occurred in 9.5% of cases during the perioperative period. This emphasizes the importance of close perioperative evaluation and monitoring of these patients for ventricular arrhythmia. Most of these patients require cardiac electrophysiologist involvement and consideration for an implantable cardioverter-defibrillator (ICD) for long-term management.**

# Evaluating the ECG for ACS:

# Evaluating the ECG for ACS:

## *Patients with Normal Width QRS (QRSd < 120ms)*

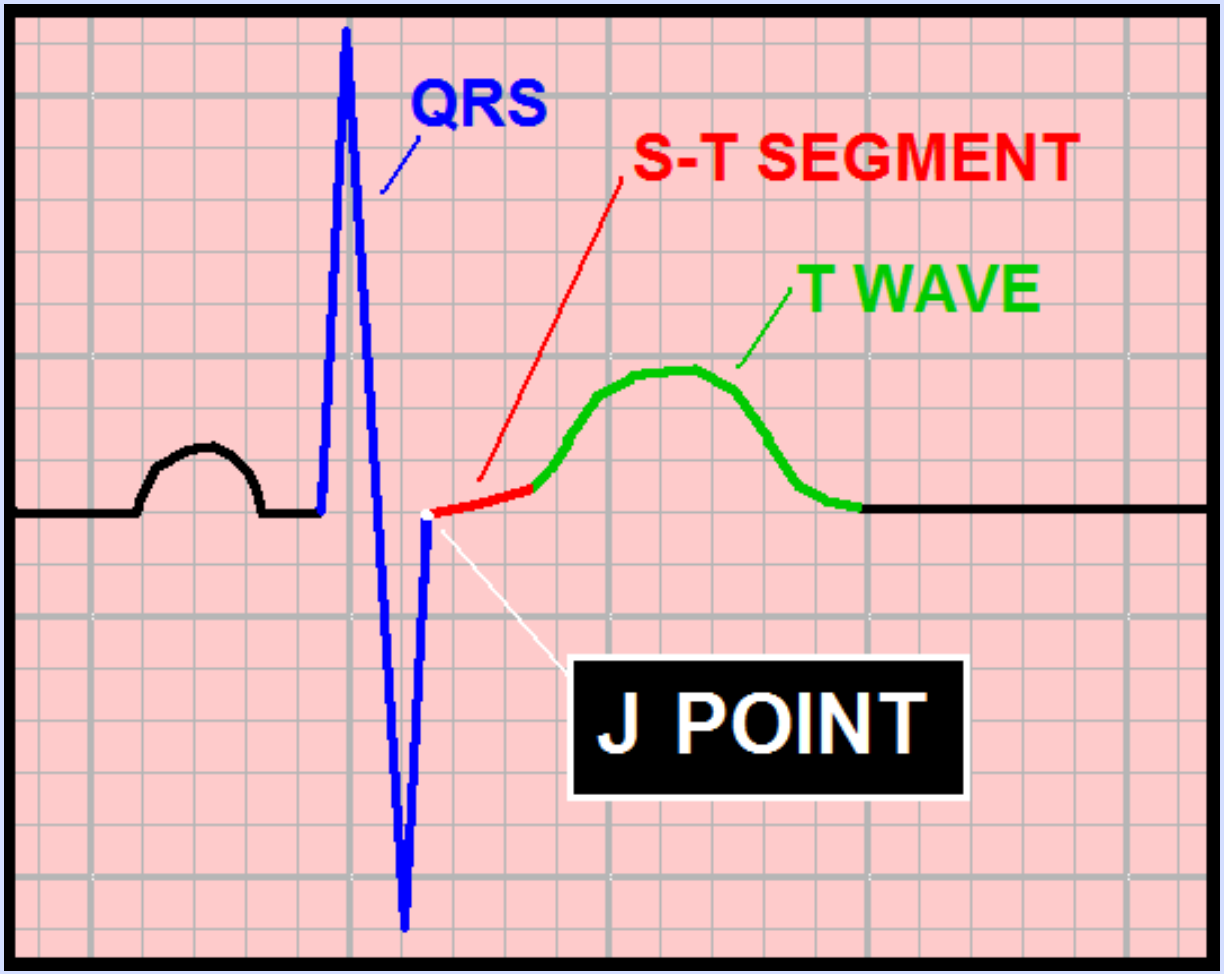
### STEP 2 - EVALUATE the EKG for ACS

THE EKG MARKERS USED FOR DETERMINING THE PRESENCE OF ACUTE CORONARY SYNDROME INCLUDE:

- J POINTS
- ST SEGMENTS
- T WAVES

CAREFULLY SCRUTINIZE THESE MARKERS IN EVERY LEAD OF THE 12 LEAD EKG, TO DETERMINE IF THEY ARE *NORMAL* or *ABNORMAL*.

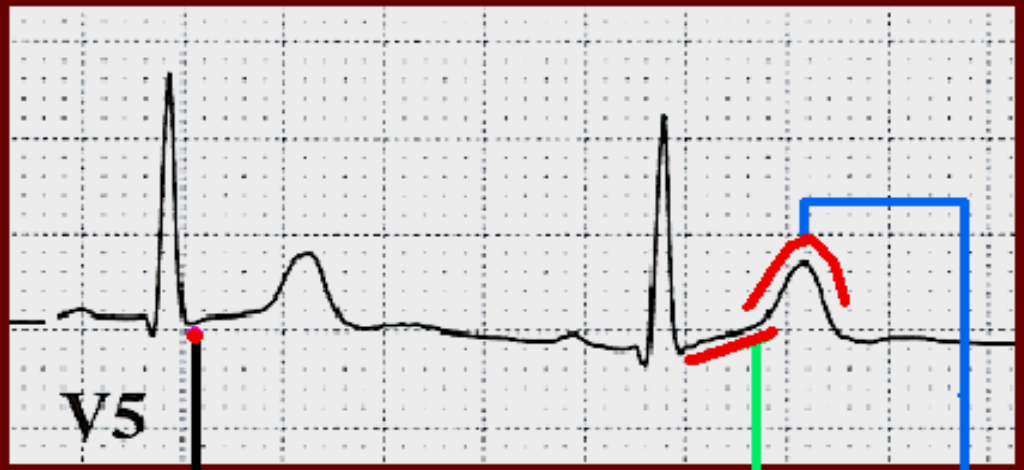
# Defining NORMAL – QRS <120ms:



## When QRS duration is NORMAL ( < 120 ms ):

# NORMAL ST - T WAVES

- WHEN QRS WIDTH IS NORMAL ( < 120 ms )

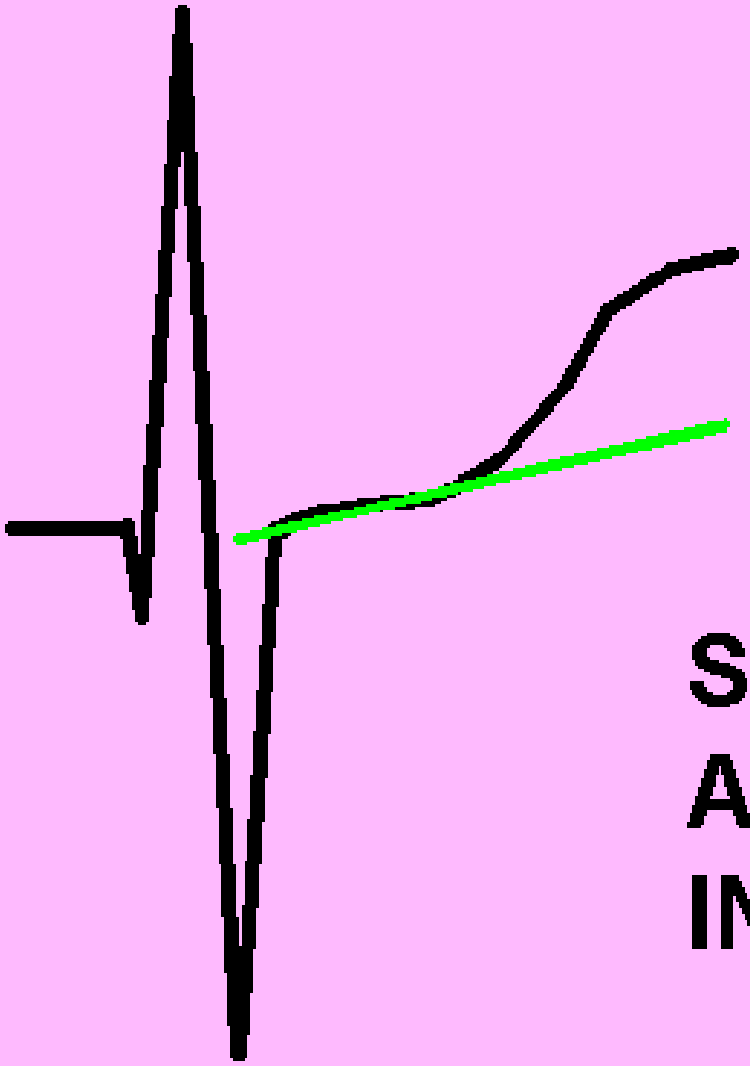


## *ASSESS:*

- J POINT: ISOELECTRIC ( or < 1 mm dev. )
- ST SEG: SLIGHT, POSITIVE INCLINATION
- T WAVE: UPRIGHT, POSITIVE

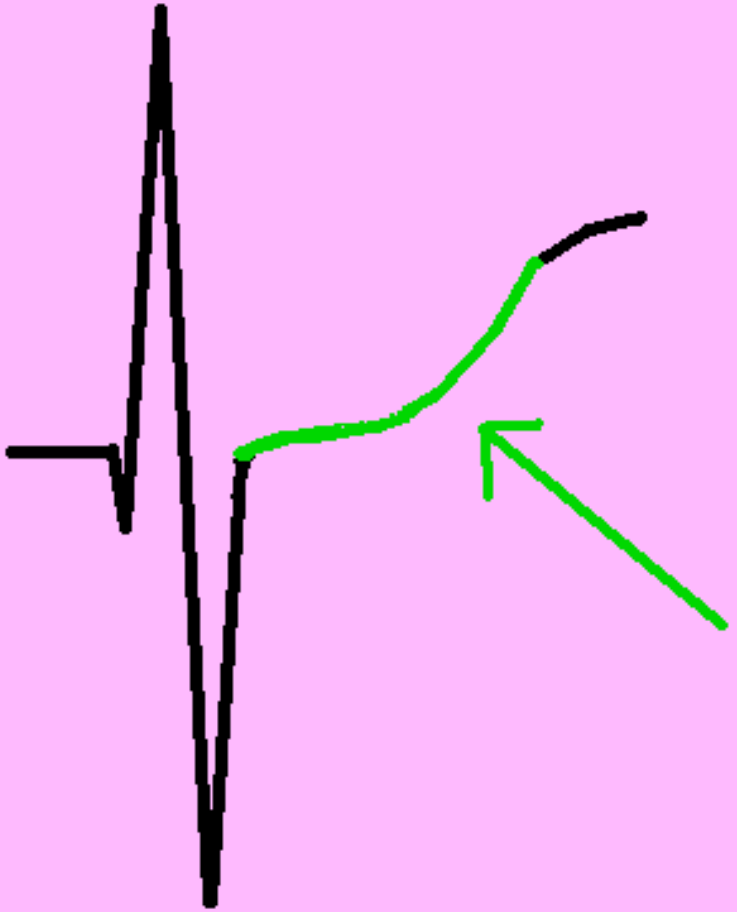
☞ *in EVERY LEAD EXCEPT aVR ! !*

# THE S-T SEGMENT



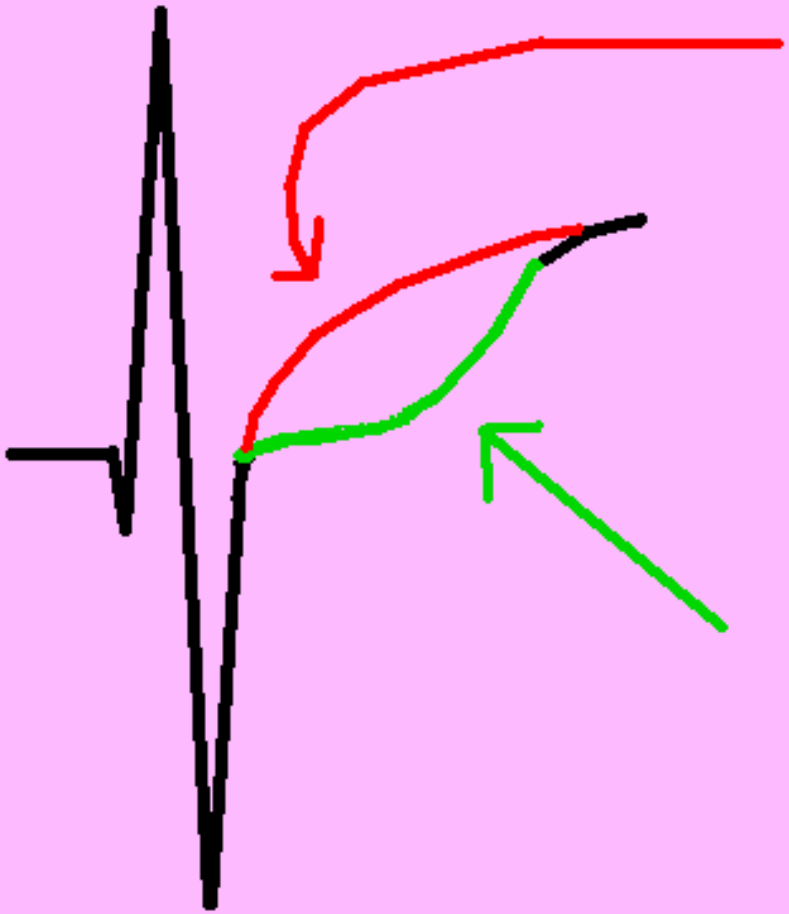
SHOULD HAVE
A "SLIGHT POSITIVE"
INCLINATION

# THE S-T SEGMENT



SHOULD BE "CONCAVE" IN SHAPE . . .

# THE S-T SEGMENT



AS OPPOSED TO "CONVEX" IN SHAPE

SHOULD BE "CONCAVE" IN SHAPE . . .

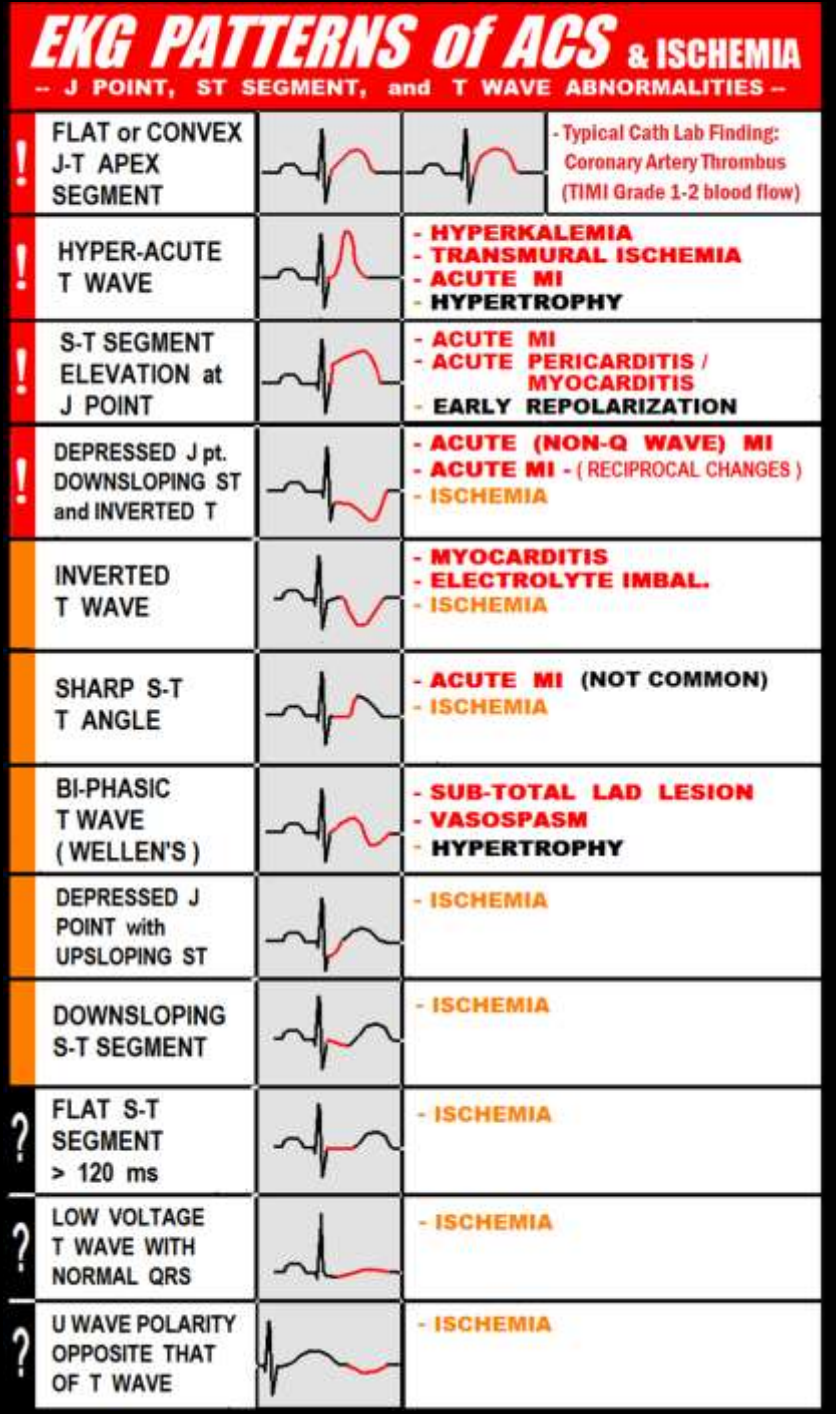
Multiple patterns of **ABNORMAL:**

- **J Point**
- **ST-Segment**
- **T Wave**

configurations **may indicate ACS.**

Remember, "IF IT'S NOT **NORMAL**, it's ***ABNORMAL !***"

**BOOK PAGE: 83**



# EKG PATTERNS of ACS & ISCHEMIA

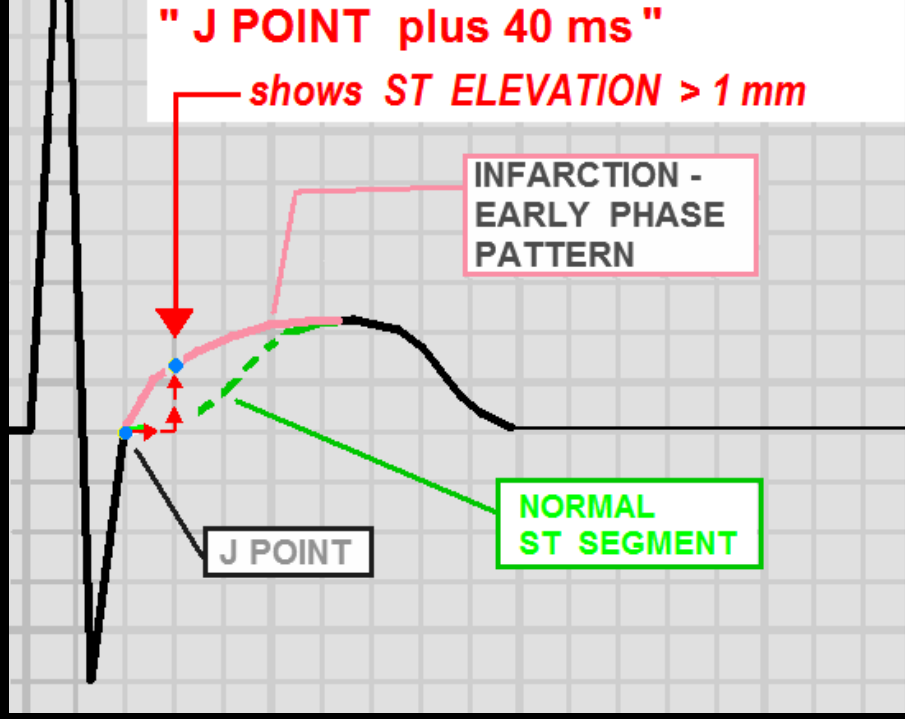
## PATTERNS of EARLY INFARCTION

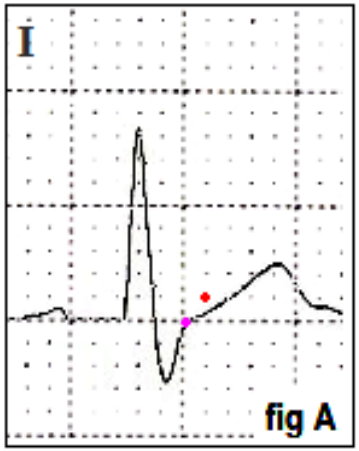
-- FLAT and CONVEX J-T APEX SEGMENTS

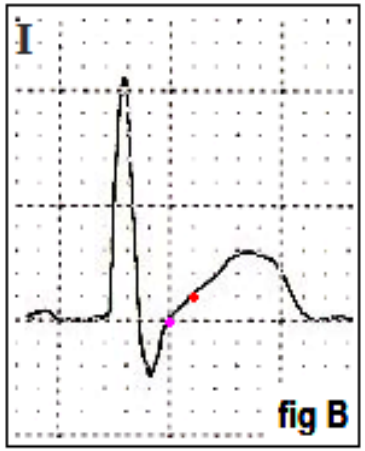
# WHEN EVALUATING for ST SEGMENT ELEVATION . . . . . .

From:
AMERICAN HEART ASSOCIATION
ACLS 2005 REVISIONS



**During NORMAL STATES of PERFUSION, the J POINT is ISOELECTRIC and the ST SEGMENT has a CONCAVE appearance. When measured 40 ms beyond the J POINT (noted by the RED DOT), the ST SEGMENT elevation is less than 1mm.**

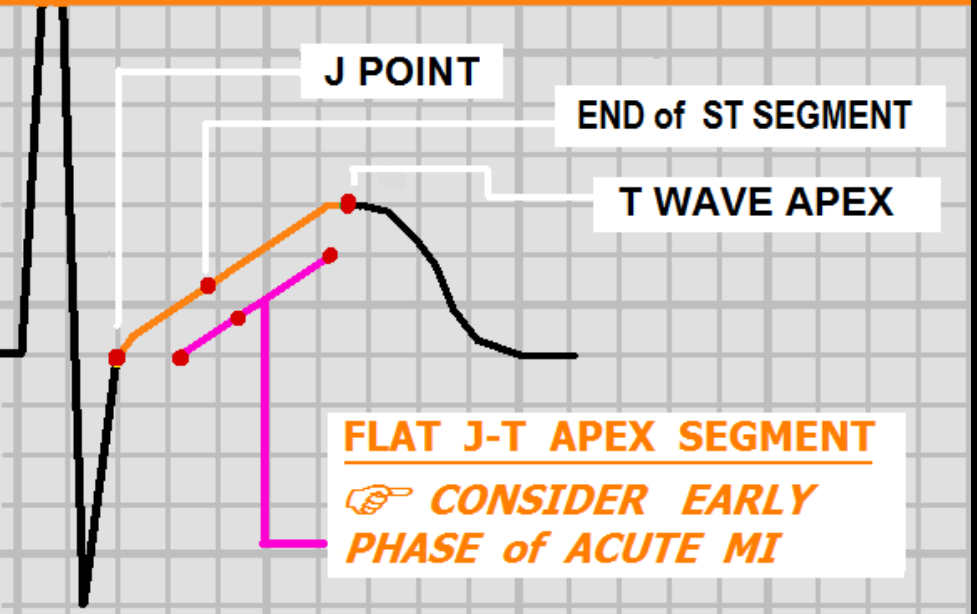




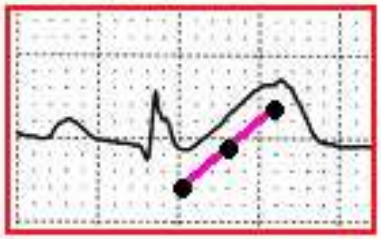
**During a 20 second BALLOON OCCLUSION of the patient's LAD during routine PTCA, the ST segment assumes a CONVEX shape. When measured 40 ms beyond the J POINT, the ST segment is elevated > 1 mm. This phenonemon is seen routinely in the cath lab prior to the occurance of ST ELEVATION at the J POINT during PTCA and STENTING.**

**Both figures were recorded from a 54 year old male while resting (figure A), and during PTCA of the Left Anterior Descending artery (figure B).**

# ABNORMAL J-T APEX SEGMENT



LEAD II



1839 hrs

# CASE STUDY: ABNORMAL J-T APEX SEGMENTS

## CHIEF COMPLAINT and SIGNIFICANT HISTORY:

56 y/o MALE presents to ED with complaint of "INTERMITTENT SUBSTERNAL & SUB-EPIGASTRIC PRESSURE" x 3 HOURS. PMHx of ESOPHAGEAL REFLUX. NO other significant past medical history.

## RISK FACTOR PROFILE:

- FAMILY HISTORY - father died of MI at age 62
- ☑ PREVIOUS CIGARETTE SMOKER - quit 15 years ago.
- ☑ CHOLESTEROL - DOES NOT KNOW; "never had it checked."
- ☑ OBESITY

**PHYSICAL EXAM:** Patient supine on exam table, mildly anxious, currently complaining of "mild indigestion," skin is warm, pale, dry; REST OF EXAM is UNREMARKABLE.

**VITAL SIGNS:** BP 142/94, P 80, R 20, SAO2 98%

**LABS:** JUST OBTAINED, RESULTS NOT AVAILABLE YET.

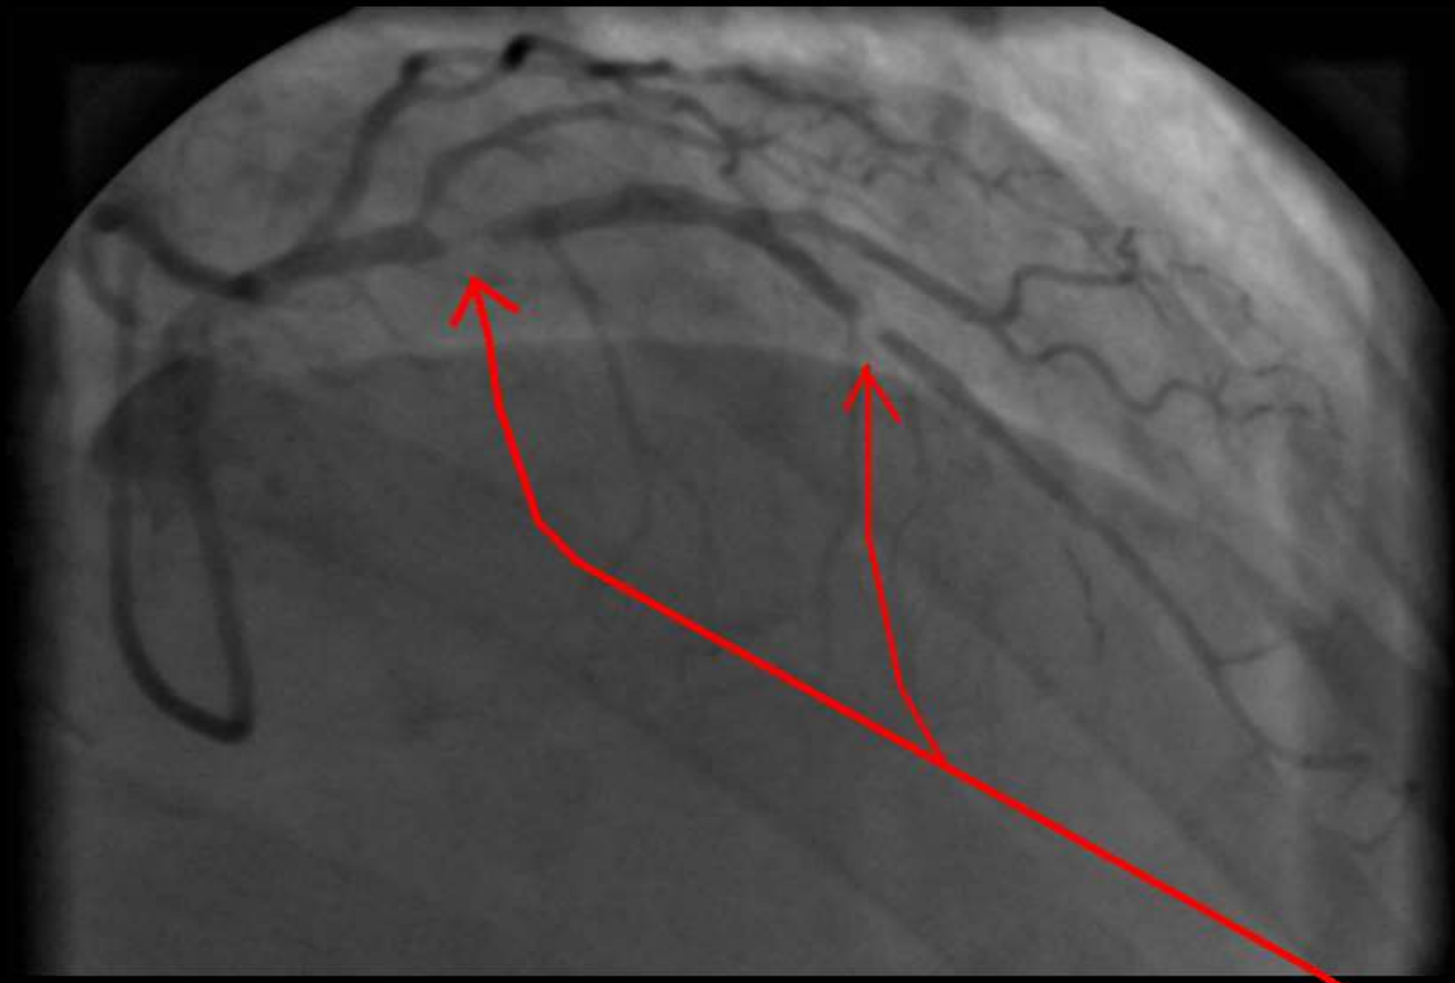
## *BI-PHASIC T WAVE*

- SUB-TOTAL OCCLUSION of LEFT ANTERIOR DESCENDING ARTERY ( when noted in V1-V4 )
- LEFT VENTRICULAR HYPERTROPHY
- COCAINE INDUCED VASOSPASM

# BI-PHASIC T WAVES

58 y/o MALE WITH SUB-TOTAL OCCLUSIONS OF THE LEFT ANTERIOR DESCENDING ARTERY



58 y/o MALE WITH "WELLEN'S WARNING." PT HAS SUB-TOTALLY OCCLUDED LAD X 2

# Classic "Wellen's Syndrome:"

- Characteristic T wave changes
  - Biphasic T waves
  - Inverted T waves
- History of anginal chest pain
- Normal or minimally elevated cardiac markers
- ECG without Q waves, without significant ST-segment elevation, and with normal precordial R-wave progression

# Wellen's Syndrome ETIOLOGY:

- Critical Lesion, Proximal LAD
- Coronary Artery Vasospasm
- Cocaine use (vasospasm)
- Increased myocardial oxygen demand
- Generalized Hypoxia / anemia / low H&H

# Wellen's Syndrome EPIDEMIOLOGY & PROGNOSIS:

- **Present in 14-18% of patients admitted with unstable angina**
- **75% patients not treated developed extensive Anterior MI within 3 weeks.**
- ***Median Average time from presentation to Acute Myocardial Infarction – 8 days***

**Sources:** **H Wellens et. Al, Am Heart J 1982; v103(4) 730-736**

# Wellen's Syndrome Case Study

- 33 y/o male
- Chief complaint "sharp, pleuritic quality chest pain, intermittent, recent history lower respiratory infection with productive cough."
- ED physician attributed the ST elevation in precordial leads to "early repolarization," due to patient age, gender, race (African American) and concave nature of ST-segments.

# (ST ELEVATION @ J POINT)

## *LEADS V2 and V3:

MALES AGE 40 and up ------ 2.0 mm

(MALES LESS THAN 40------- 2.5 mm)

FEMALES ---------- 1.5 mm

**ALL OTHER LEADS:** 1.0 mm or more,
in TWO or more
CONTIGUOUS LEADS

* **P. Rautaharju et al, "Standardization and Interpretation of the ECG," JACC 2009;(53)No.11:982-991**

# STEMI Criteria for 18 Lead ECGs:

***Right-Sided Chest Leads***

***(V3R – V6R): 0.5 mm***

***Posterior Chest Leads***

***(V7 – V9): 0.5 mm***

* **P. Rautaharju et al, "Standardization and Interpretation of the ECG," JACC 2009;(53)No.11:982-991**

# Abnormal ST Elevation Criteria: ACC/AHA 2009 "Standardization and Interpretation of the ECG, Part VI Acute Ischemia and Infarction," Galen Wagner, et al

**Recommendations**

1. For men 40 years of age and older, the threshold value for abnormal J-point elevation should be 0.2 mV (2 mm) in leads $V_2$ and $V_3$ and 0.1 mV (1 mm) in all other leads.
2. For men less than 40 years of age, the threshold values for abnormal J-point elevation in leads $V_2$ and $V_3$ should be 0.25 mV (2.5 mm).
3. For women, the threshold value for abnormal J-point elevation should be 0.15 mV (1.5 mm) in leads $V_2$ and $V_3$ and greater than 0.1 mV (1 mm) in all other leads.
4. For men and women, the threshold for abnormal J-point elevation in $V_3R$ and $V_4R$ should be 0.05 mV (0.5 mm), except for males less than 30 years of age, for whom 0.1 mV (1 mm) is more appropriate.
5. For men and women, the threshold value for abnormal J-point elevation in $V_7$ through $V_9$ should be 0.05 mV (0.5 mm).
6. For men and women of all ages, the threshold value for abnormal J-point depression should be −0.05 mV (−0.5 mm) in leads $V_2$ and $V_3$ and −0.1 mV (−1 mm) in all other leads.

# ST SEGMENT ELEVATION:

S-T SEGMENTS ELEVATE WITHIN SECONDS OF CORONARY ARTERY OCCLUSION:

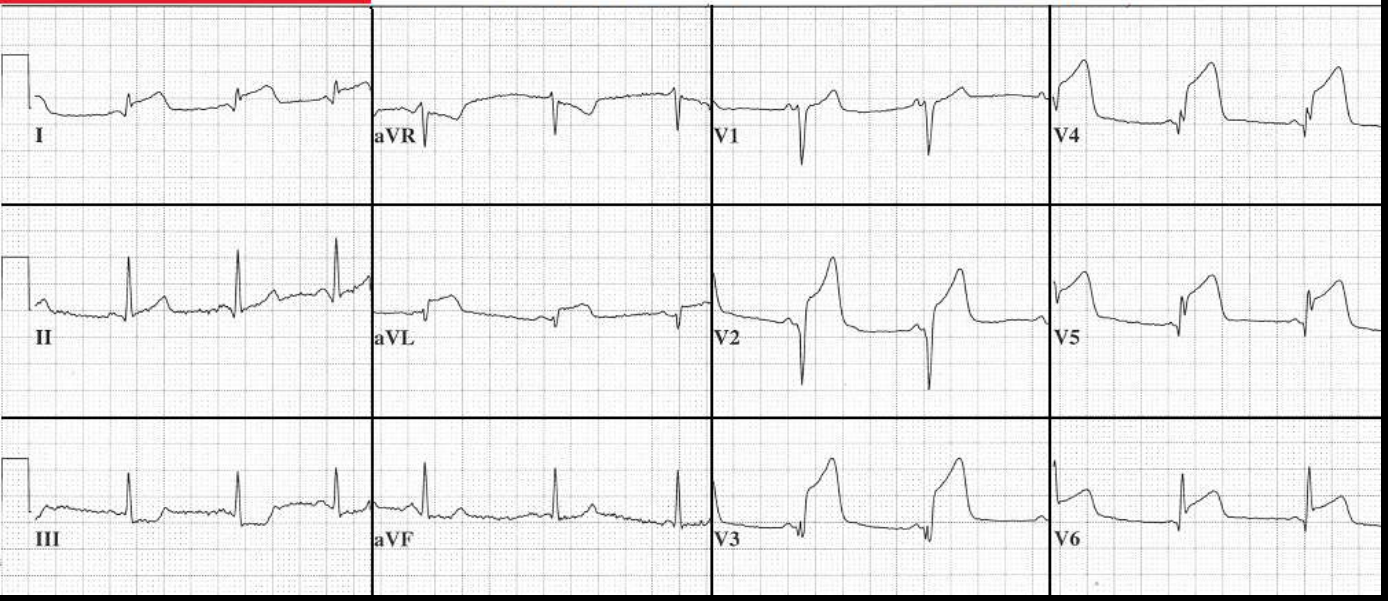
## CASE STUDY 4: CRITICAL DECISIONS SCENARIO

As per current AHA recommendations, your hospital's policy is to send every STEMI patient to the Cardiac Catheterization Lab for emergency PCI.

You are the ranking medical officer on duty in the ED when two acute STEMI patients arrive, ten minutes apart. The Cath Lab has one lab open, and can take ONE patient immediately.
Both patients duration of symptoms and state of hemodynamic stability are similar.

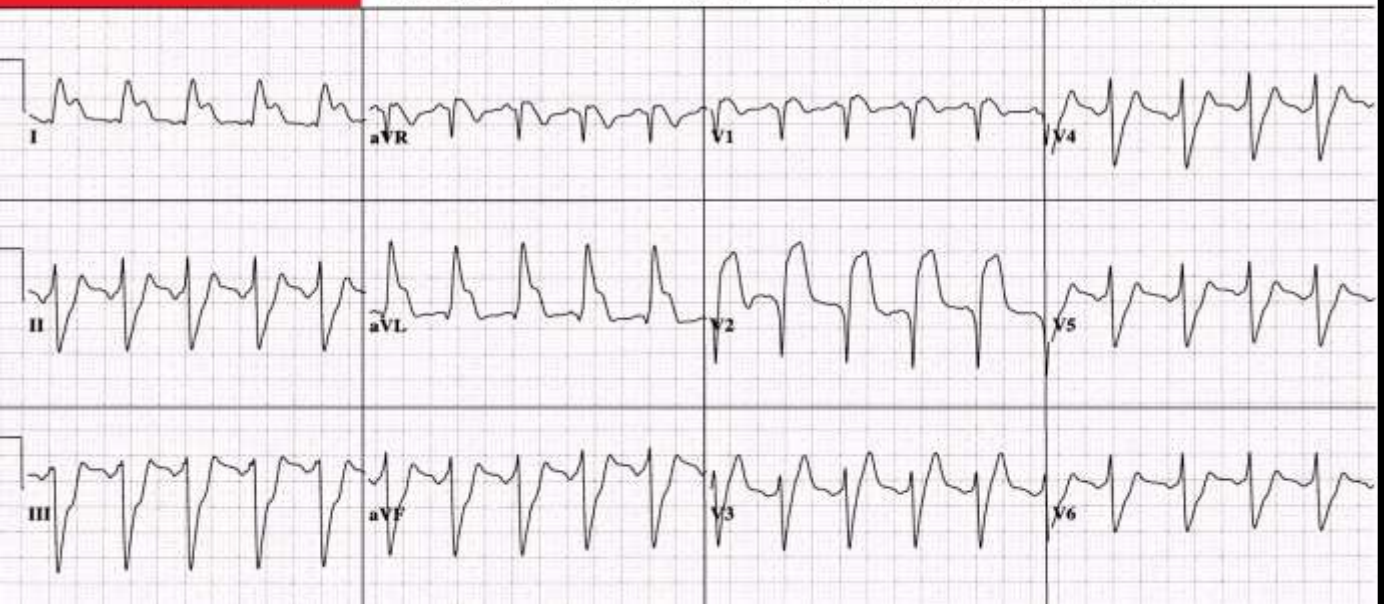
**PATIENT A:** 44 y/o MALE, CHEST PAIN x 1 HOUR,
BP: 78/46, P: 70, R: 28. CARDIAC MARKERS: NEGATIVE



WHO SHOULD GO TO THE CATH LAB FIRST ?

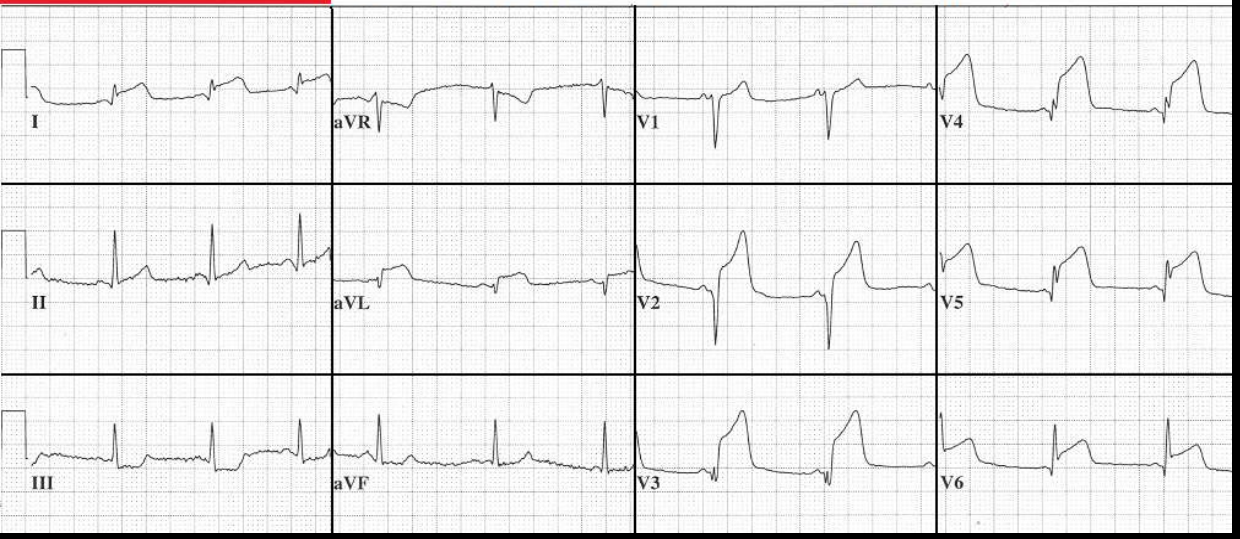
And . . . .

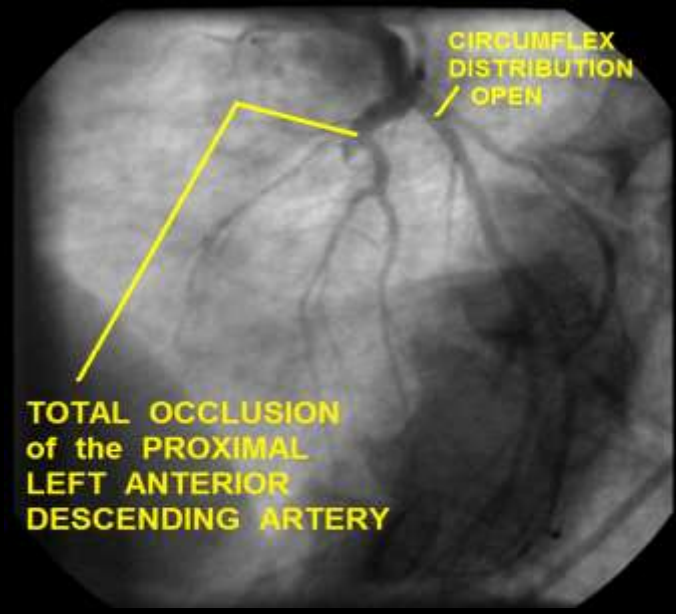
**PATIENT B:** 36 y/o MALE, CHEST PAIN x 1 HOUR,
BP: 80/48, P: 120, R: 28 CARDIAC MARKERS: NEGATIVE



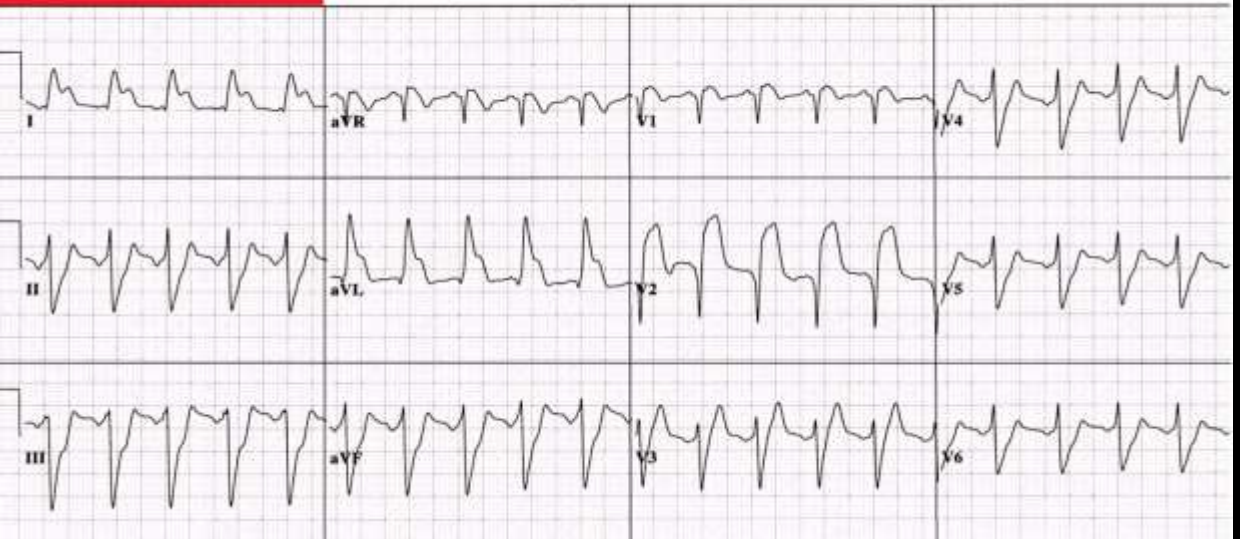
WHAT WOULD YOU DO WITH THE PATIENT WHO DID NOT GO TO THE CATH LAB ?

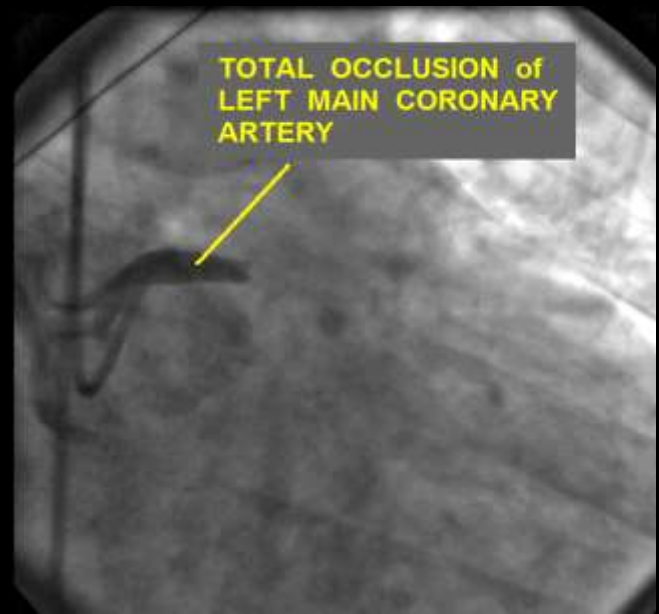
**PATIENT A:** 44 y/o MALE, CHEST PAIN x 1 HOUR,
BP: 78/46, P: 70, R: 28. CARDIAC MARKERS: NEGATIVE



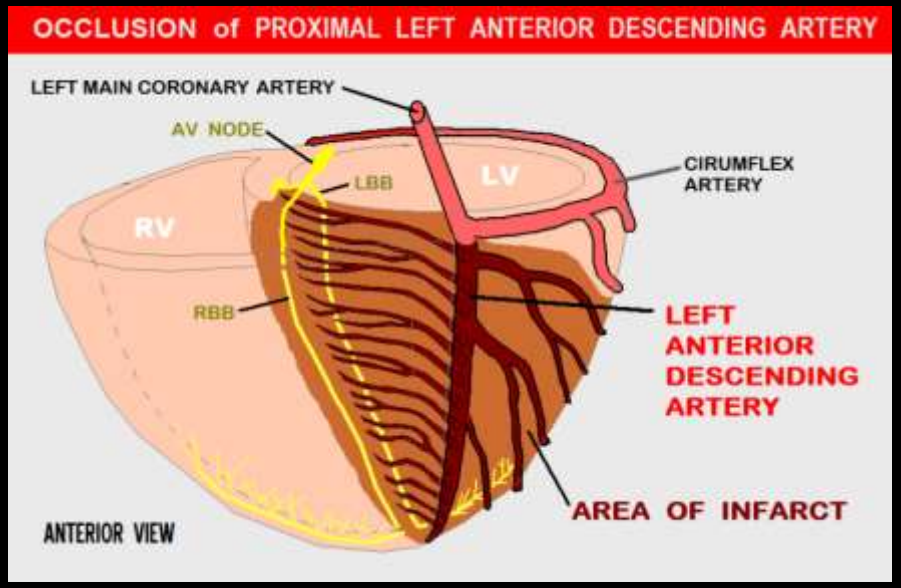


**PATIENT B:** 36 y/o MALE, CHEST PAIN x 1 HOUR,
BP: 80/48, P: 120, R: 28 CARDIAC MARKERS: NEGATIVE

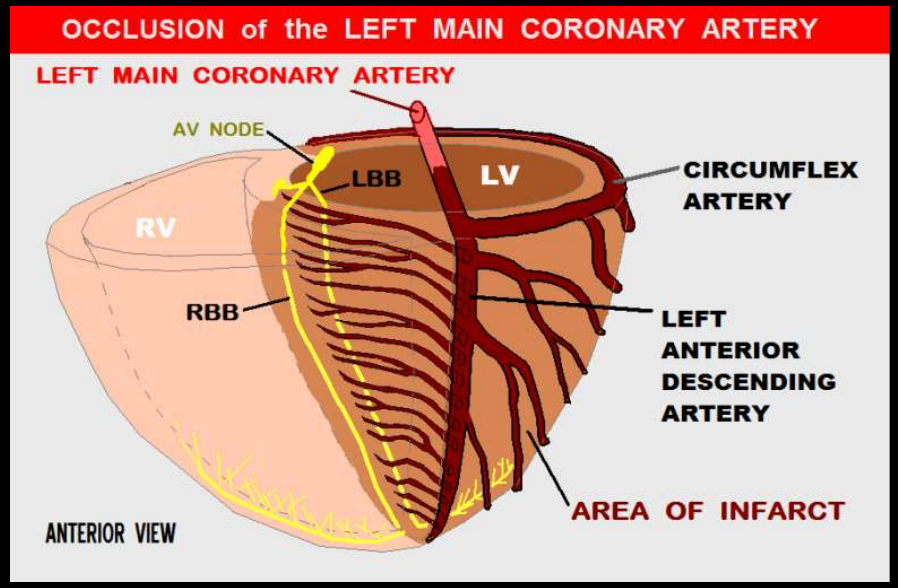


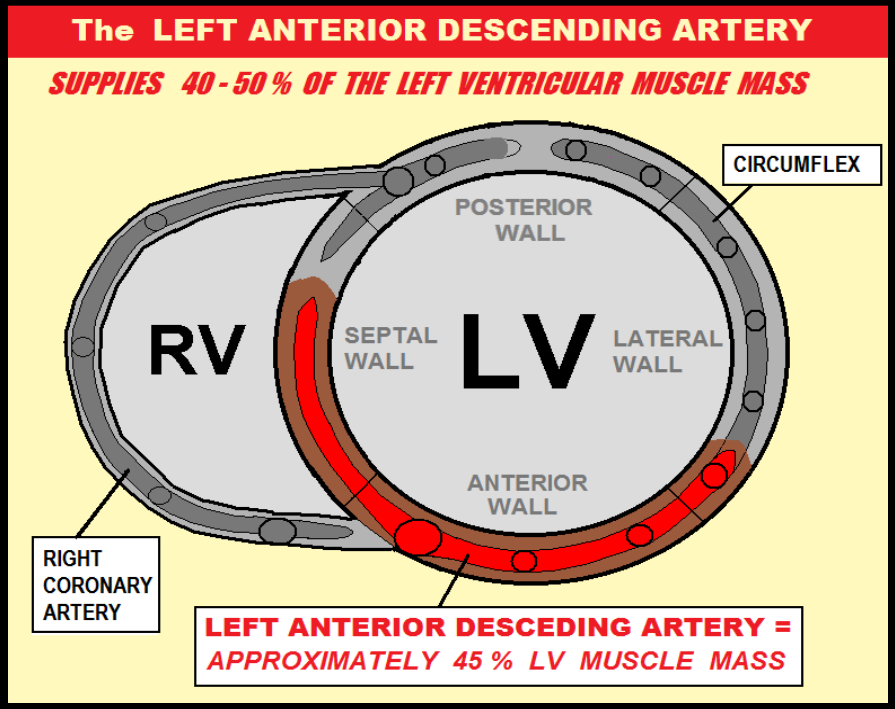


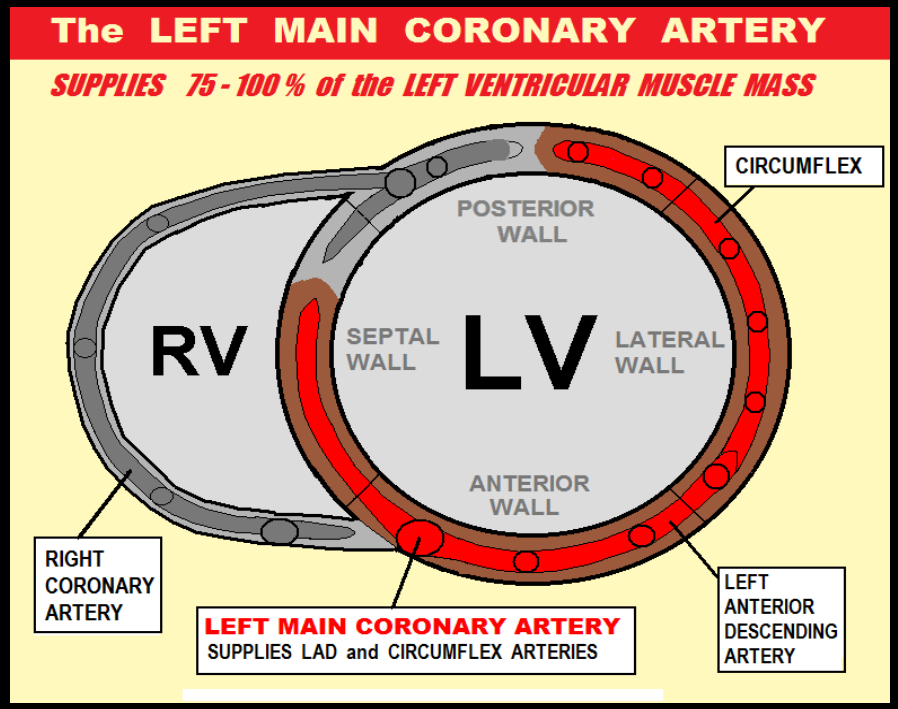
PATIENT A:



PATIENT B:







# ECG Clues . . . for IDENTIFYING STEMI CAUSED BY LEFT MAIN CORONARY ARTERY occlusion:

- ☑ ST ELEVATION in ANTERIOR LEADS (V1 - V4) and LATERAL LEADS (V5 & V6)
- ☑ ST DEPRESSION or ISOELCTRIC J POINTS may be seen in V LEADS . . . . mainly V2 and/or V3 *caused by COMPETING FORCES of ANTERIOR vs. POSTERIOR WALL MI.* *+
  - → NOTE: it is very unusual to see ST DEPRESSION in V LEADS with isolated ANTERIOR WALL MI when caused by occluded LAD.
- ☑ ST ELEVATION in AVR is GREATER THAN ST ELEVATION in V1 *+
- ☑ ST ELEVATION in AVR GREATER THAN 0.5 mm
- ☑ ST ELEVATION in LEAD I and AVL ( caused by NO FLOW to DIAGONAL / OBTUSE MARGINAL BRANCHES ) *
- ☑ ST DEPRESSION in LEADS II, III, and AVF. ( in cases of LMCA occlusion of DOMINANT CIRCUMFLEX, leads II, III, and AVF may show ST ELEVATION or ISOELECTRIC J POINTS ) *+
- ☑ NEW / PRESUMABLY NEW RBBB, and/or LEFT ANTERIOR FASICULAR BLOCK *+

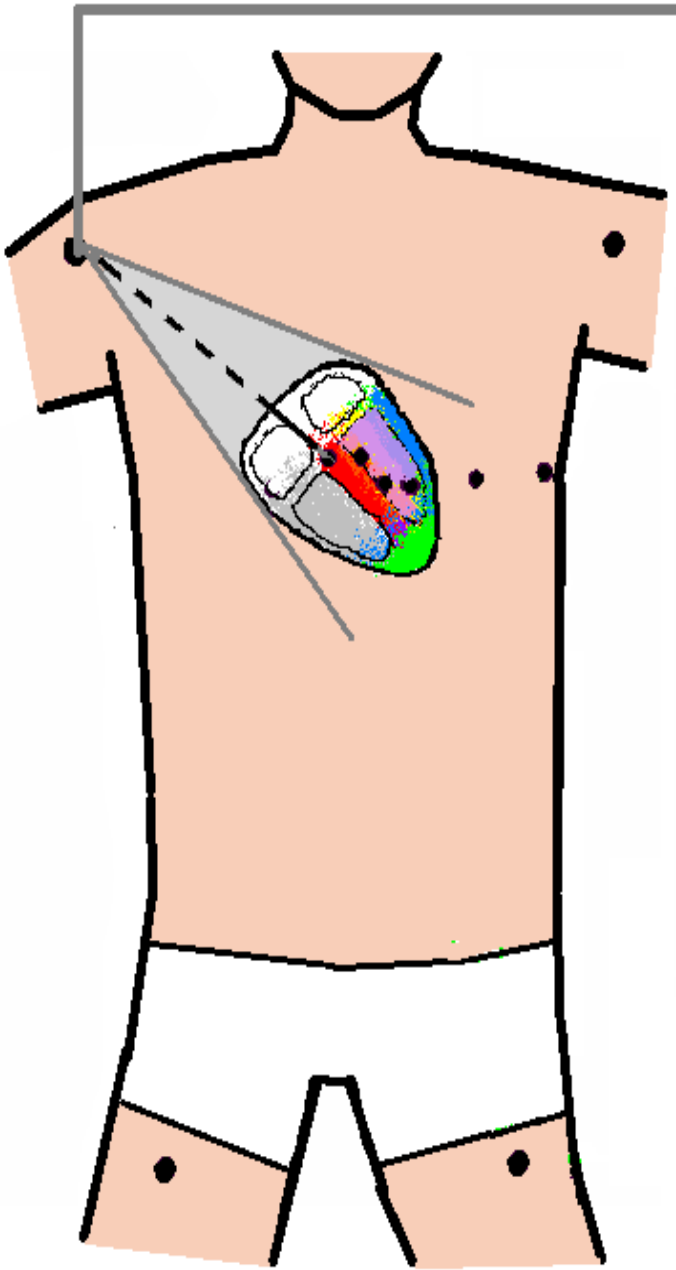
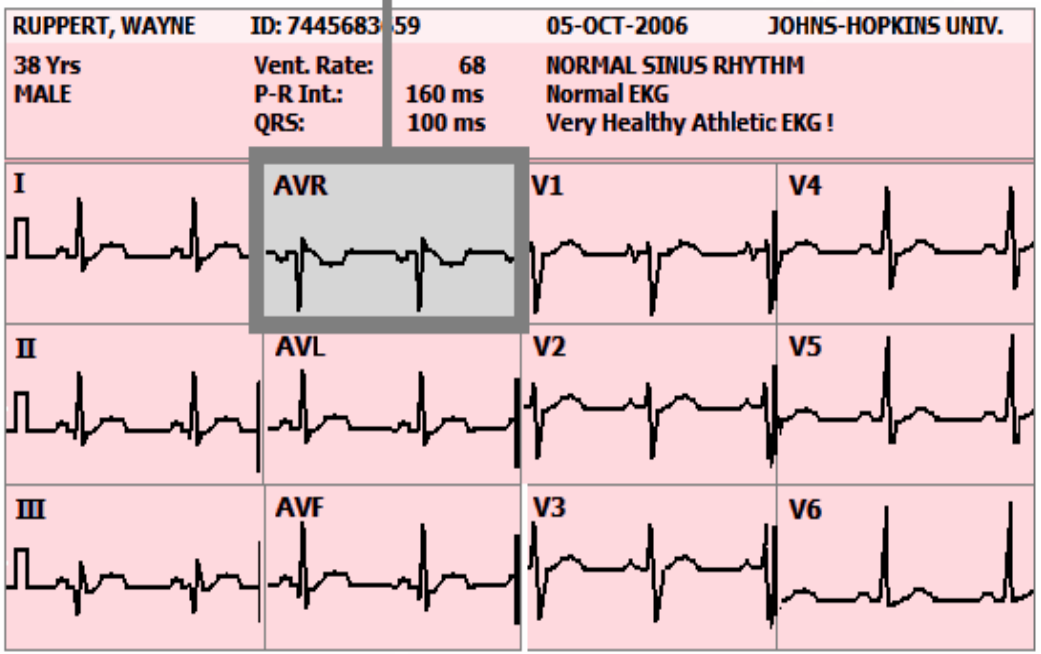
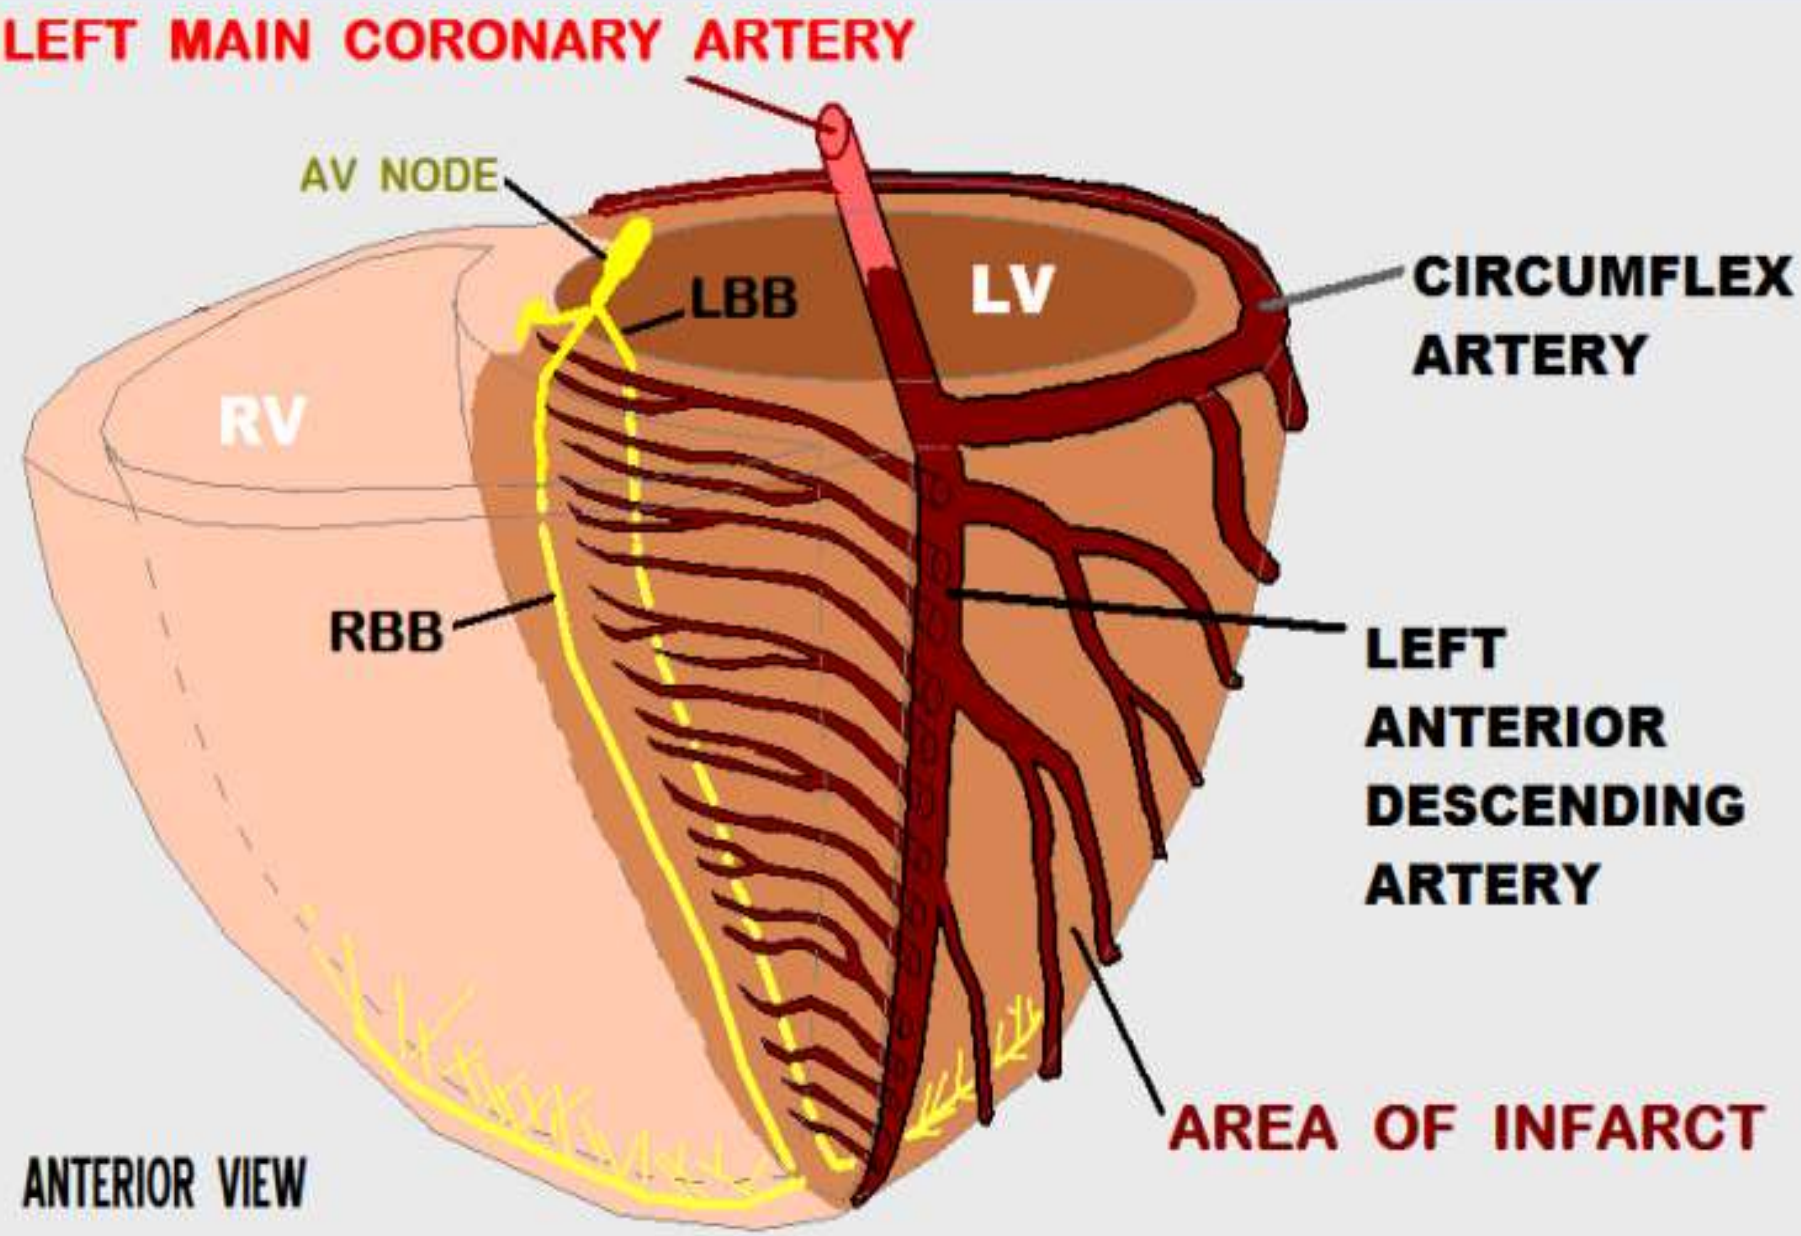
# Lead AVR Views the BASILAR SEPTUM (region of the Bundle of His)

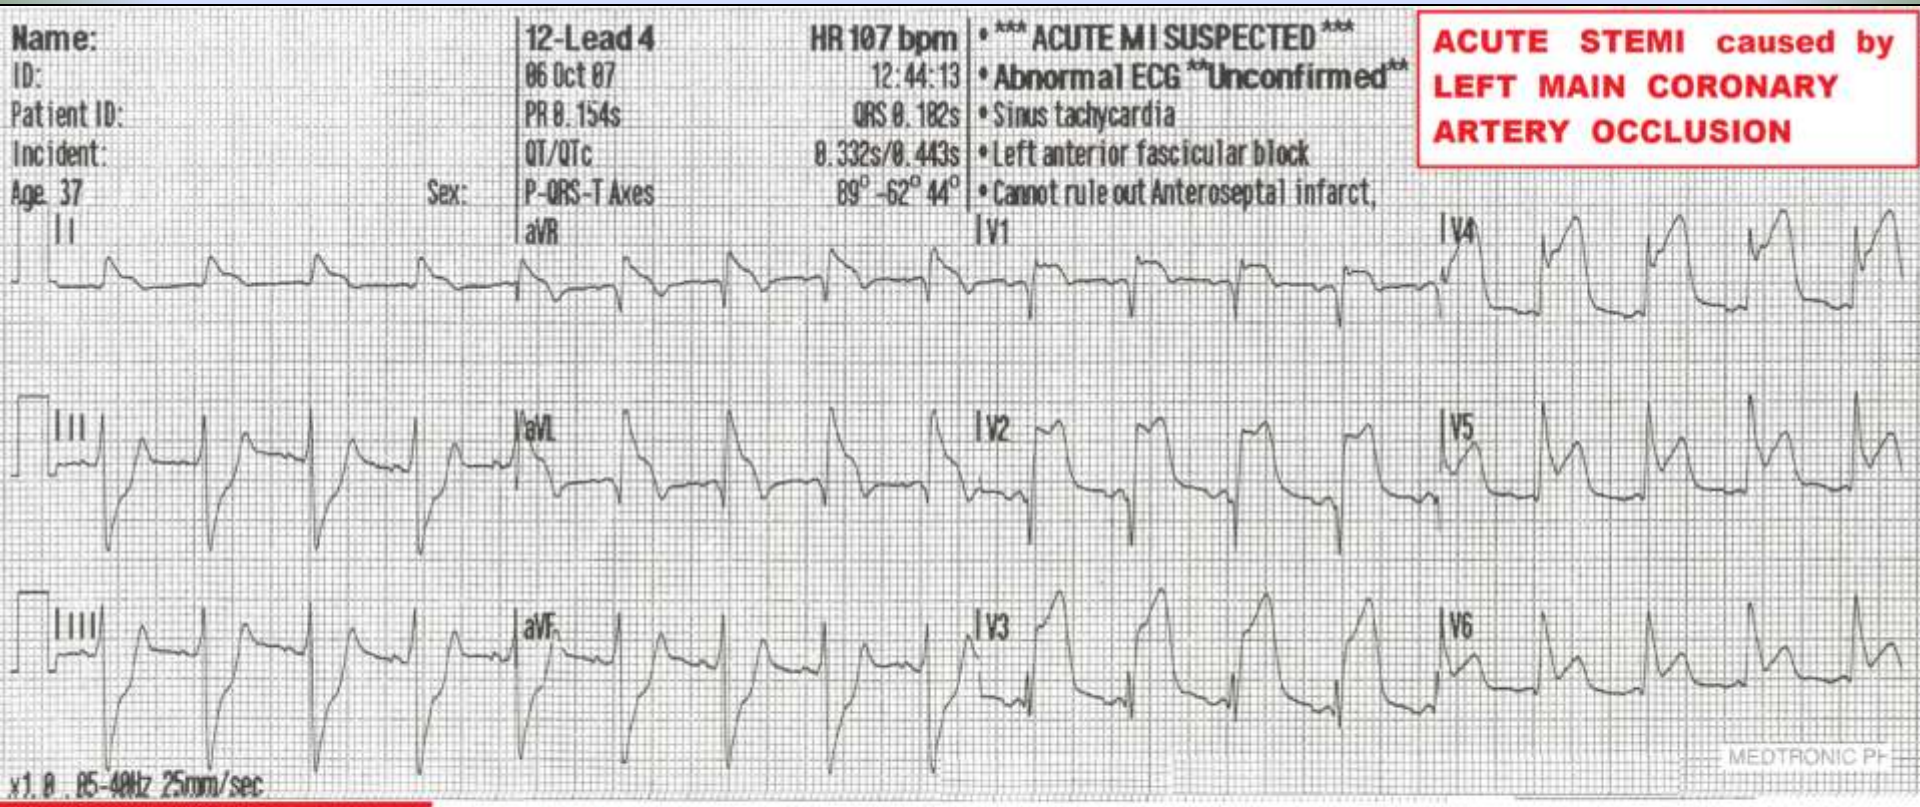




In STEMI with ST-Segment Elevation in Lead AVR,
This is indicative of
Left Main Coronary Artery Occlusion . . .

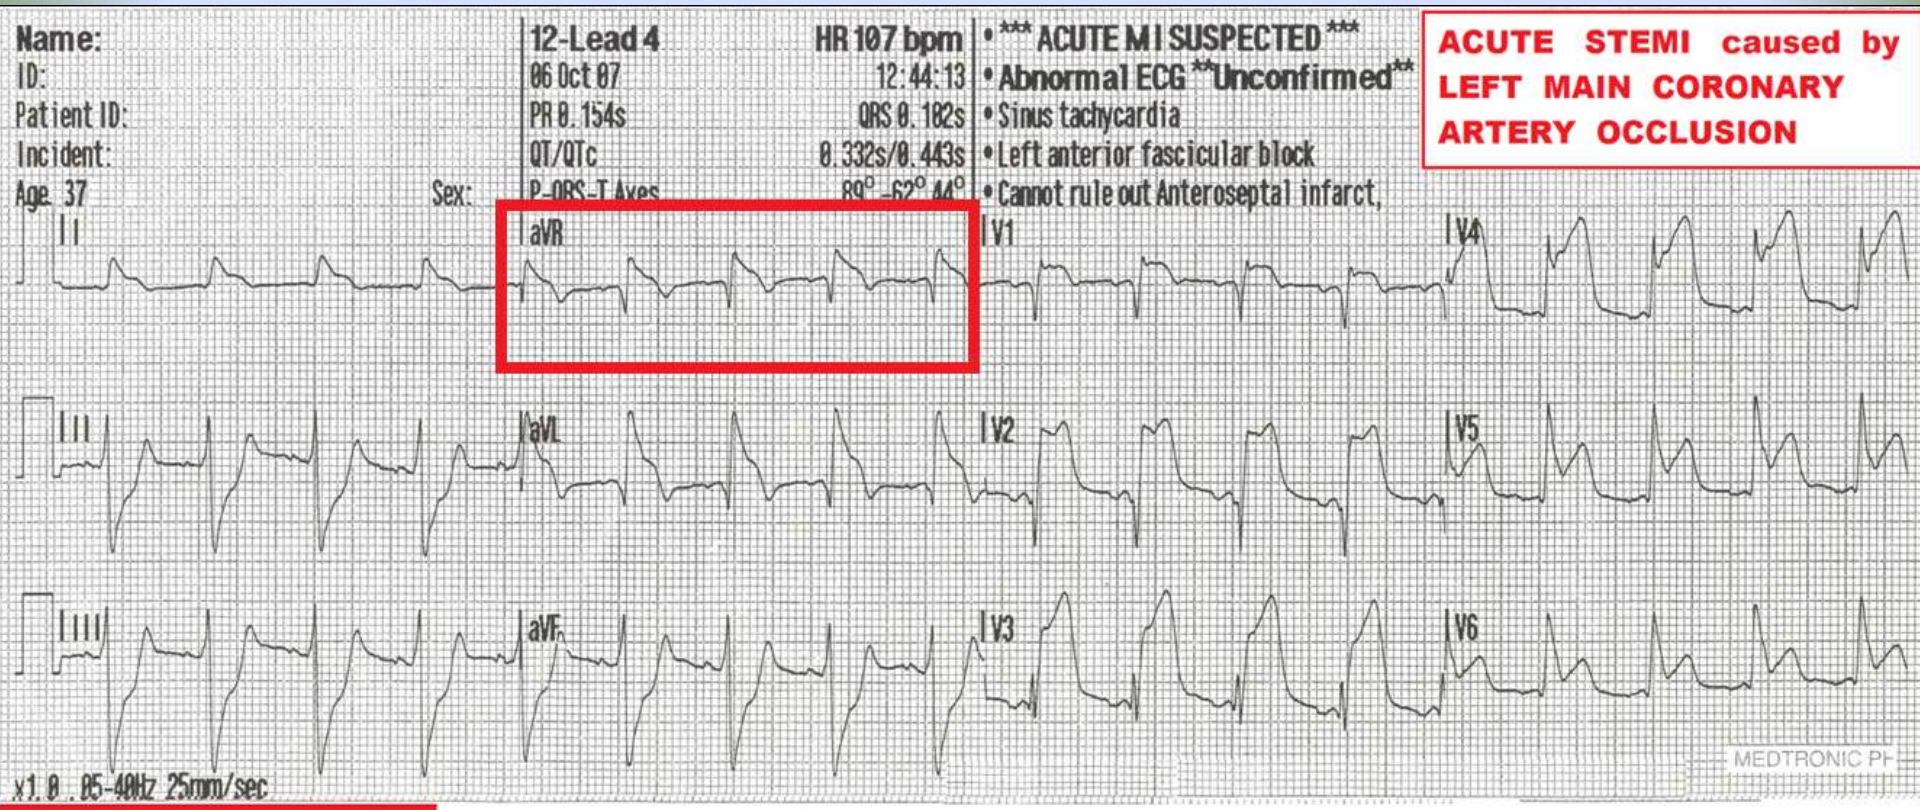
# OCCLUSION of the LEFT MAIN CORONARY ARTERY





**ECG CLUES of ACUTE STEMI caused by LEFT MAIN CORONARY ARTERY OCCLUSION:**

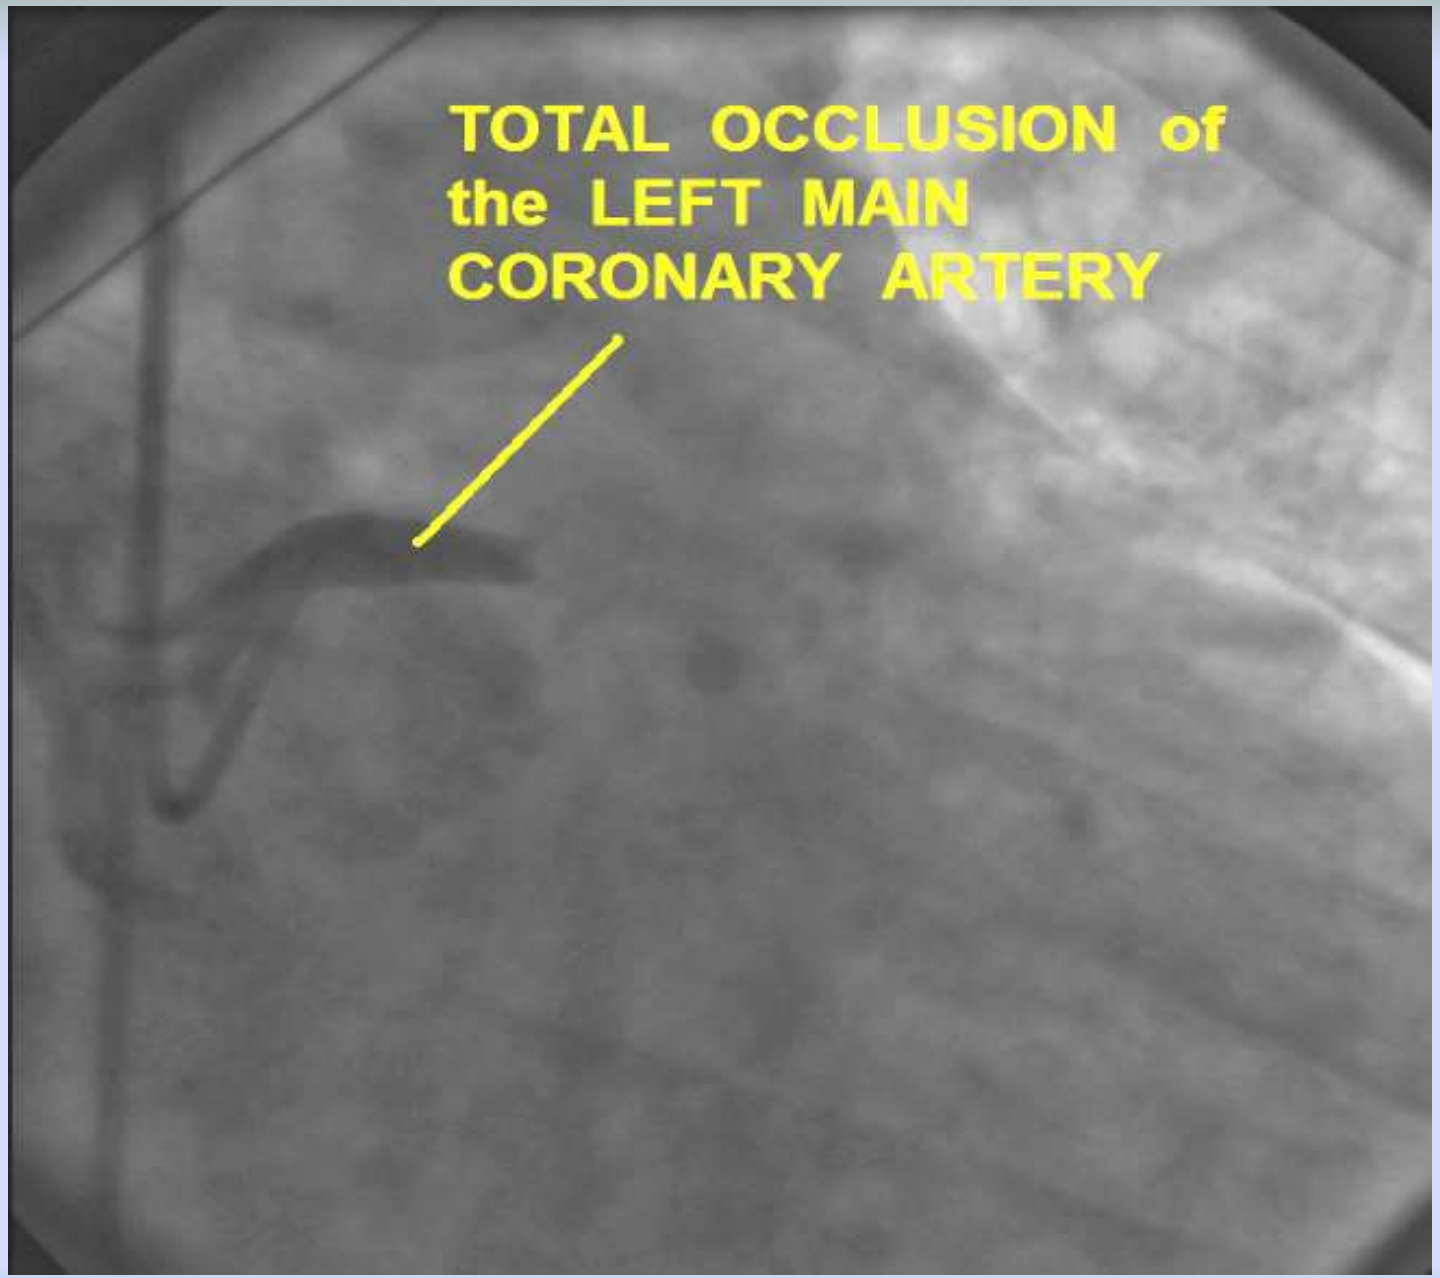
- ☑ ST ELEVATION in LEADS I, aVL, V1 - V6
- ☑ ST ELEVATION in aVR GREATER THAN 0.5 mm
- ☑ ST ELEVATION in aVR GREATER THAN LEAD V1
- ☑ LEFT ANTERIOR FASCICULAR BLOCK PATTERN



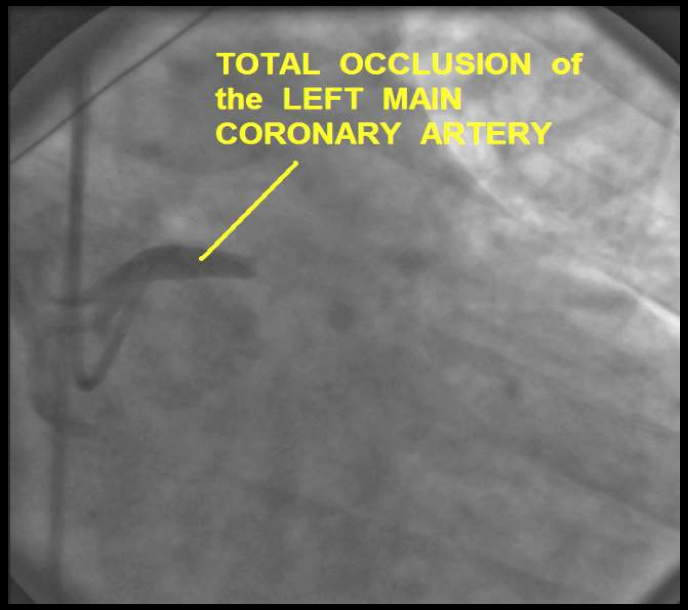
**ACUTE STEMI caused by LEFT MAIN CORONARY ARTERY OCCLUSION**

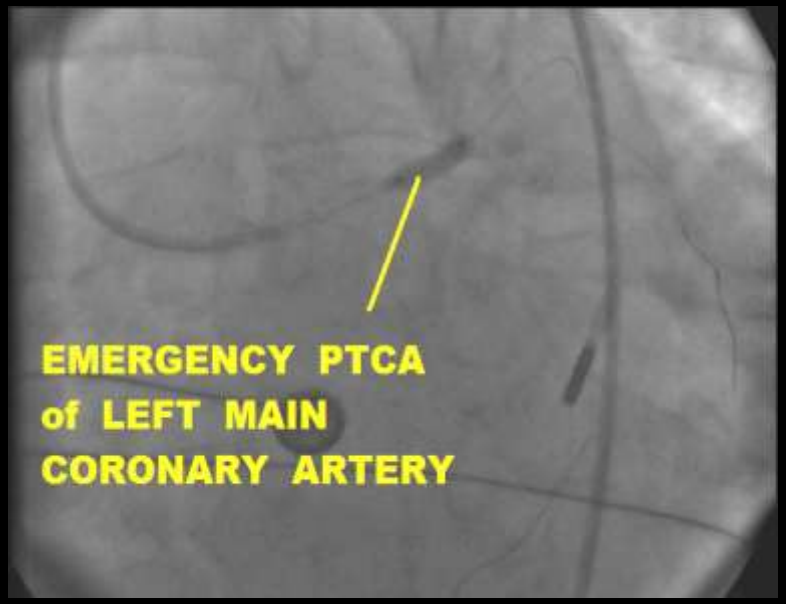
**ECG CLUES of ACUTE STEMI caused by LEFT MAIN CORONARY ARTERY OCCLUSION:**

- ☑ ST ELEVATION in LEADS I, aVL, V1 - V6
- ☑ ST ELEVATION in aVR GREATER THAN 0.5 mm
- ☑ ST ELEVATION in aVR GREATER THAN LEAD V1
- ☑ LEFT ANTERIOR FASCICULAR BLOCK PATTERN



TOTAL OCCLUSION of
the LEFT MAIN
CORONARY ARTERY





Despite the dismal mortality rate associated with STEMI from total LMCA occlusion, this patient survived and was later discharged. His EF is estimated at approximately 30%. He received an ICD, and is currently stable.

# CASE STUDY 4: CRITICAL DECISIONS SCENARIO

CONCLUSIONS:

QUESTION 1: WHICH PATIENT SHOULD BE TAKEN FIRST FOR IMMEDIATE CARDIAC CATHETERIZATION for EMERGENCY PCI ?

ANSWER: PATIENT B was taken emergently to the Cardiac Cath Lab - both the ED physician and the Interventional Cardiologist correctly identified the EKG patterns of LMCA occlusion.

---

QUESTION 2: WHAT COURSE OF ACTION SHOULD BE TAKEN WITH THE PATIENT NOT CHOSEN TO BE SENT TO THE CATH LAB FIRST?

ANSWER: PATIENT A received thrombolytic therapy in the ED. It was determined that THROMBOLYTIC THERAPY would achieve the FASTEST ROUTE to REPERFUSION -- -- *by at least 60 minutes.*

# CHANGES ASSOCIATED WITH CELLULAR PERFUSION INVOLVING THE:

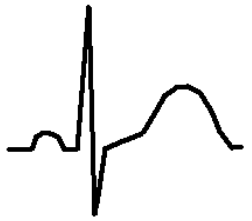
- QRS
- J POINT
- ST SEGMENT
- T WAVE

CARDIAC CELL PERFUSION STATES

## NORMAL STATE OF PERFUSION

ARTERIAL BLOCKAGES → NONE SIGNIFICANT
CELLULAR OXYGENATION → NORMAL
CELLULAR METABOLISM → AEROBIC
CELLULAR FUNCTION → NORMAL CONTRACTION

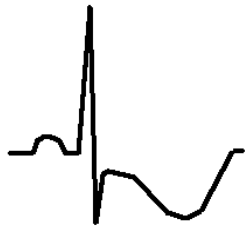
EKG: J POINT ISOELECTRIC, ST SEG "SLIGHT, POSTIVE INCLINATION, T WAVE POSITIVE, UPRIGHT.



## ISCHEMIA

ARTERIAL BLOCKAGES → PARTIAL OBSTRUCTION
CELLULAR OXYGENATION → INSUFFICIENT
CELLULAR METABOLISM → AEROBIC
CELLULAR FUNCTION → REDUCED CONTRACTION
PATIENT SYMPTOMS → *POSSIBLE*, WITH EXERTION

EKG: J POINT DEPRESSED, ST SEGMENT VARIES, T WAVE VARIES



## INFARCTION

ARTERIAL BLOCKAGES → TOTAL OBSTRUCTION
CELLULAR OXYGENATION → NONE
CELLULAR METABOLISM → ANAEROBIC *CELL BEGINS TO BURN GLYCOGEN RESERVES*
CELLULAR FUNCTION → STOPS CONTRACTING
PATIENT SYMPTOMS → *TYPICAL or ATYPICAL ACS Sx*

EKG - INDICATIVE: J POINT ELEVATES, ST SEGMENT CONVEX, T WAVE POSITIVE, MAY ENLARGE
EKG - RECIPROCAL: J POINT DEPRESSES, ST SEGMENT DOWNSLOPING, T WAVE INVERTED

## NECROSIS

ARTERIAL BLOCKAGES → TOTAL OBSTRUCTION
CELLULAR OXYGENATION → NONE
CELLULAR METABOLISM → *CELL DIES WHEN GLYCOGEN RESERVES DEPLETED.*
CELLULAR FUNCTION → NONE. CELL DEAD.
PATIENT SYMPTOMS → *POSS. HYPOTENSION, DEATH*

EKG - INDICATIVE: J POINTS, ST SEGMENTS NORMALIZE; ABNORMAL Q WAVES FORM
EKG - RECIPROCAL: J POINTS, ST SEGMENTS NORMALIZE; ABNORMAL TALL R WAVES FORM

**When a patient has an INFERIOR WALL STEMI With RIGHT VENTRICULAR involvement . . . .**

**If reperfusion is DELAYED, and NECROSIS forms . . . .**

**Do SIGNIFICANT Q WAVES form in the RIGHT VENTRICULAR LEADS ? ? ?**

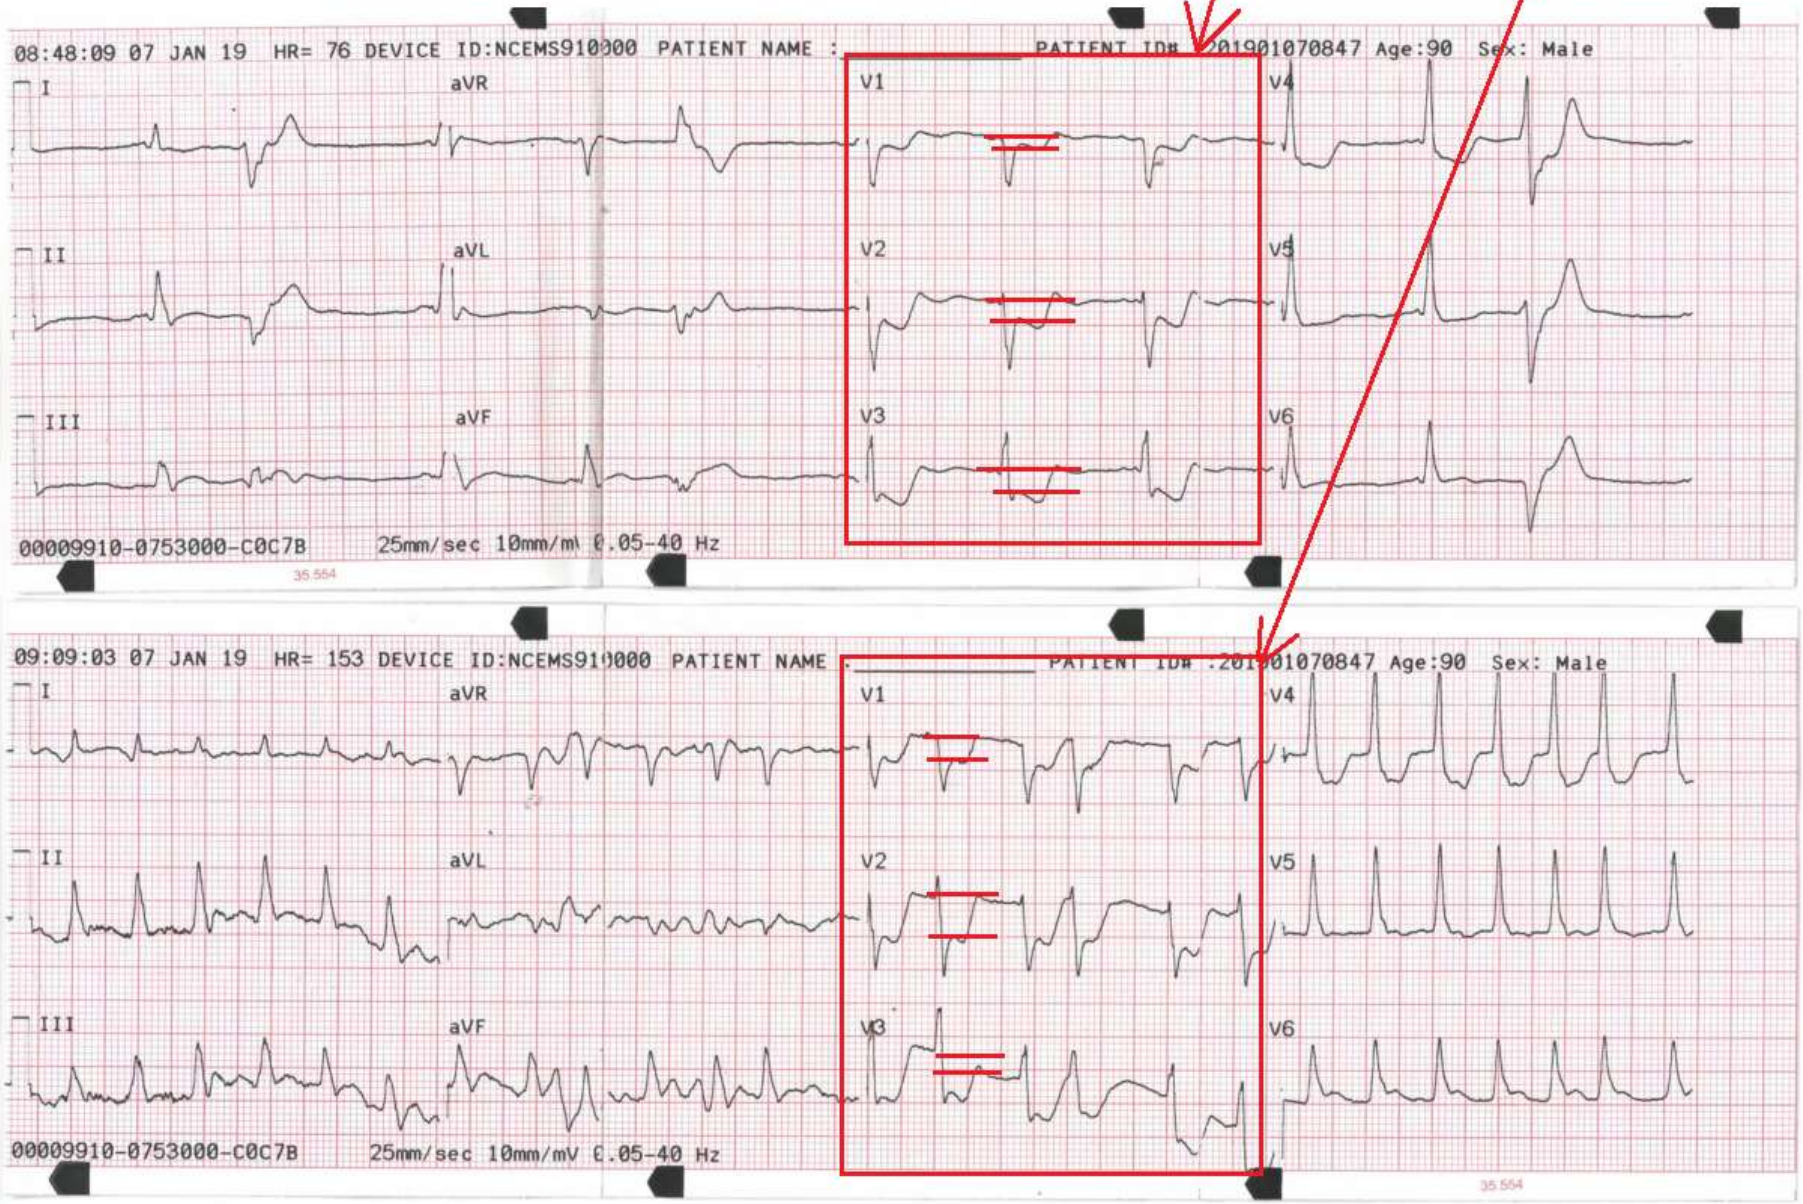
# Case Study- January 2019

- 79 y/o female complaining of “L arm pain, and minimal chest pain”
- EMS 12 Lead ECGs show ST Depression in Anterior Leads V1-V4.  There is NO ST Elevation……

Two EMS 12 Lead ECGs: none show ST Elevation, but both show significant ST depression in Anterior Leads V1-V3.



# Initial Exam in ED

- Upon arrival in ED, 12 Lead ECG confirmed EMS findings:  ST Depression in Leads V1-V4.

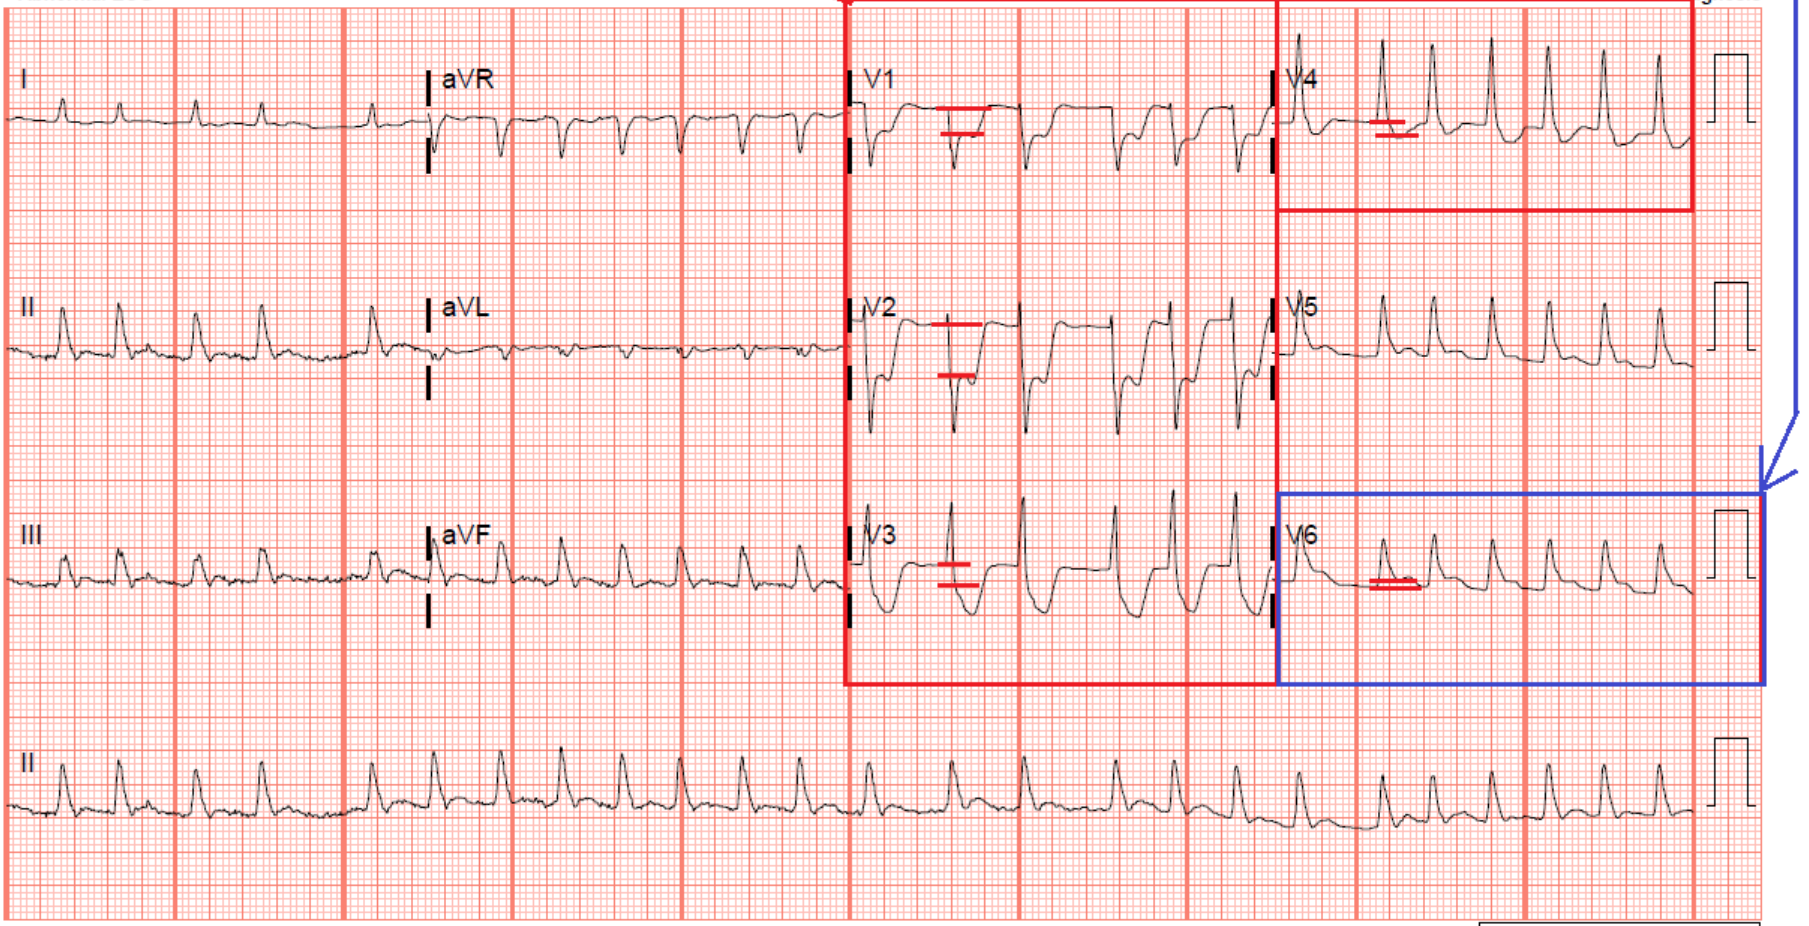
Unconfirmed Diagnosis



Philips PageWriter TC | 25 mm/sec | 10.00 mm/mV | F 60~ 0.15 - 100 Hz

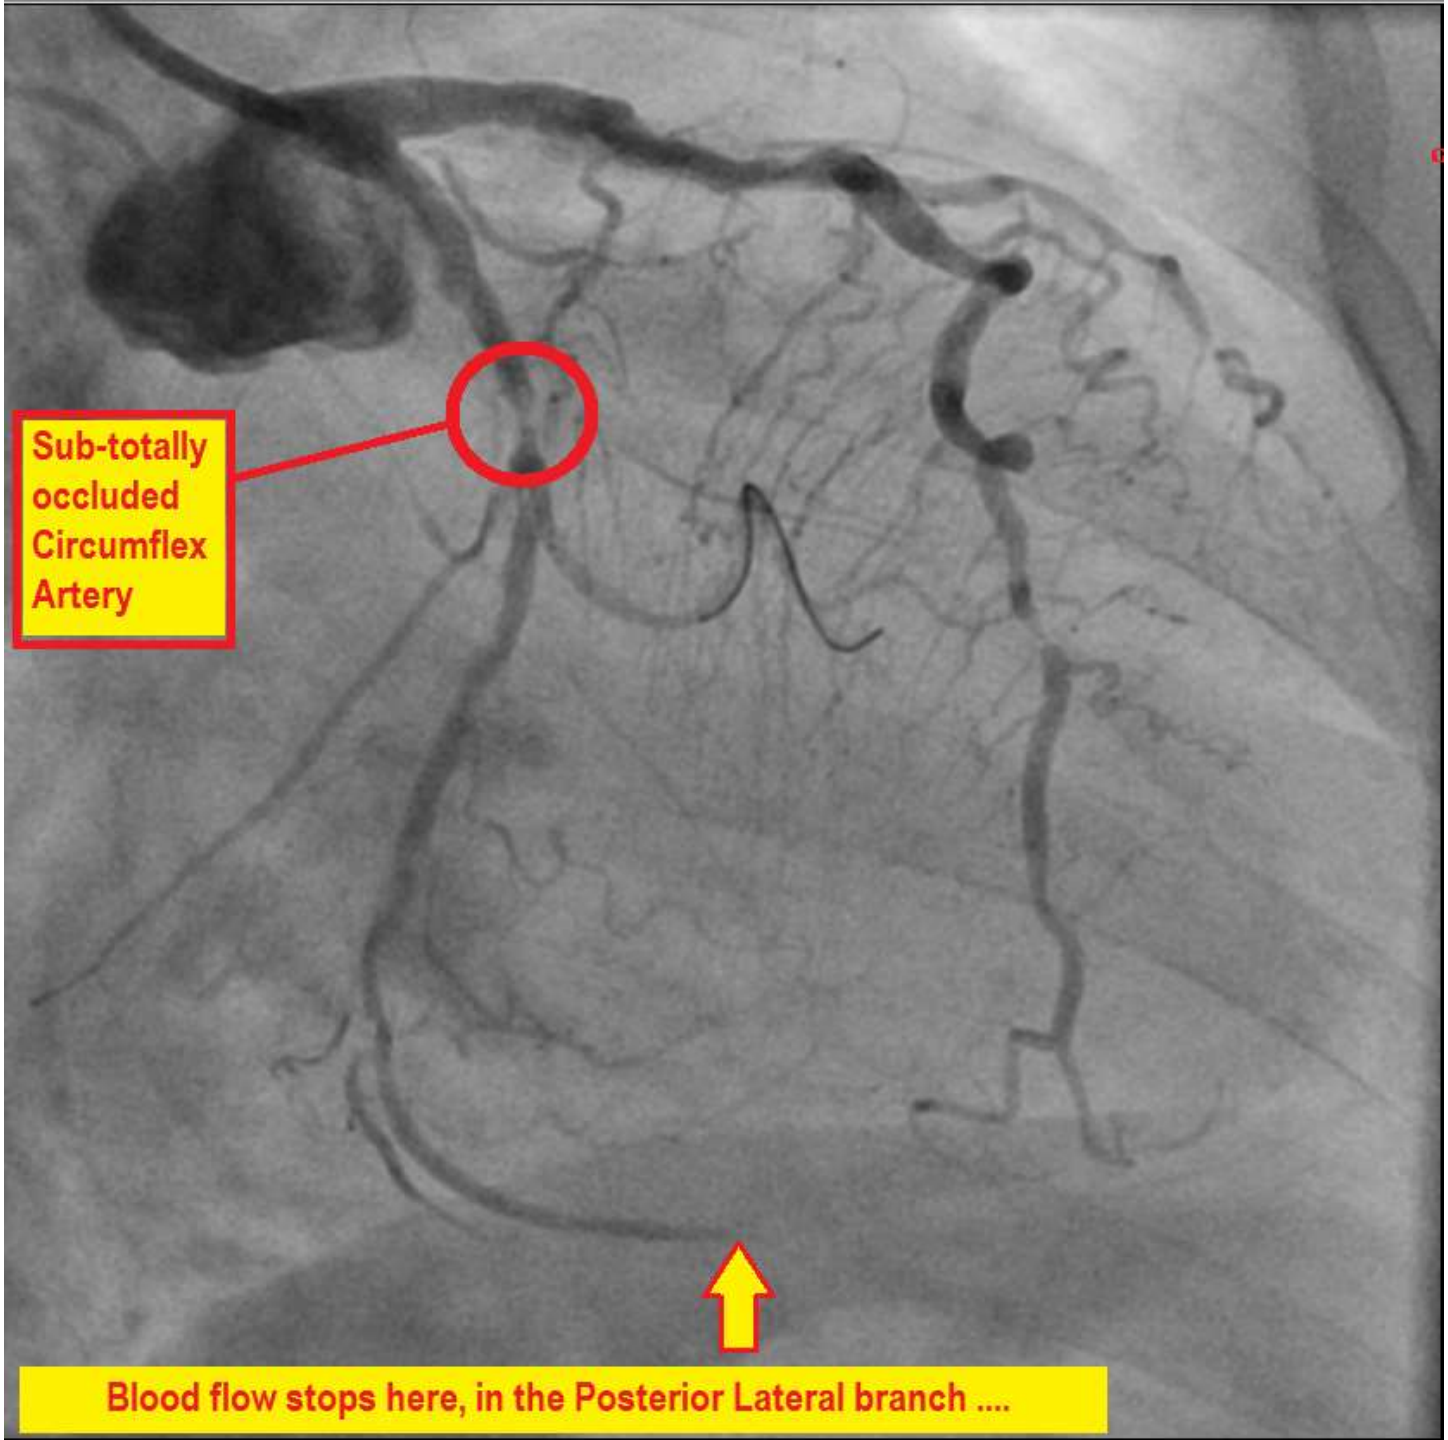
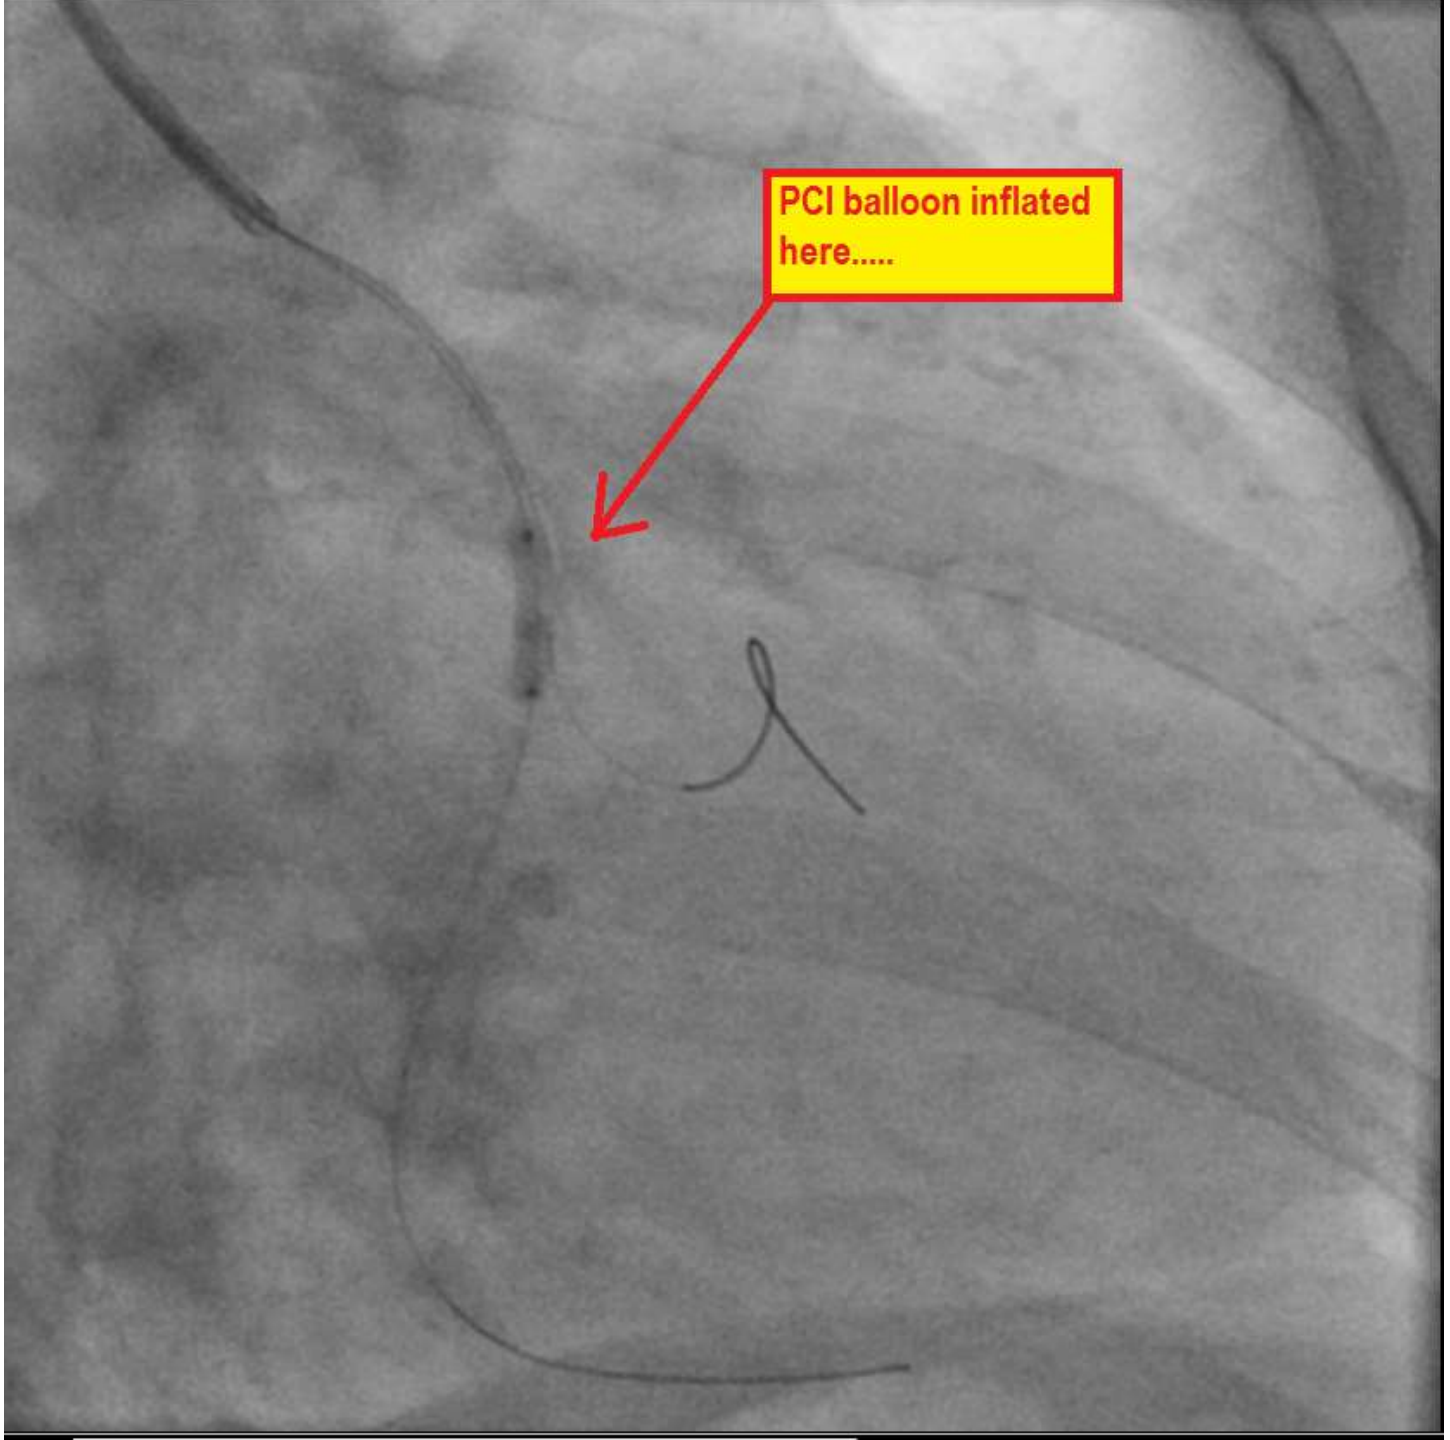
# STEMI Alert !

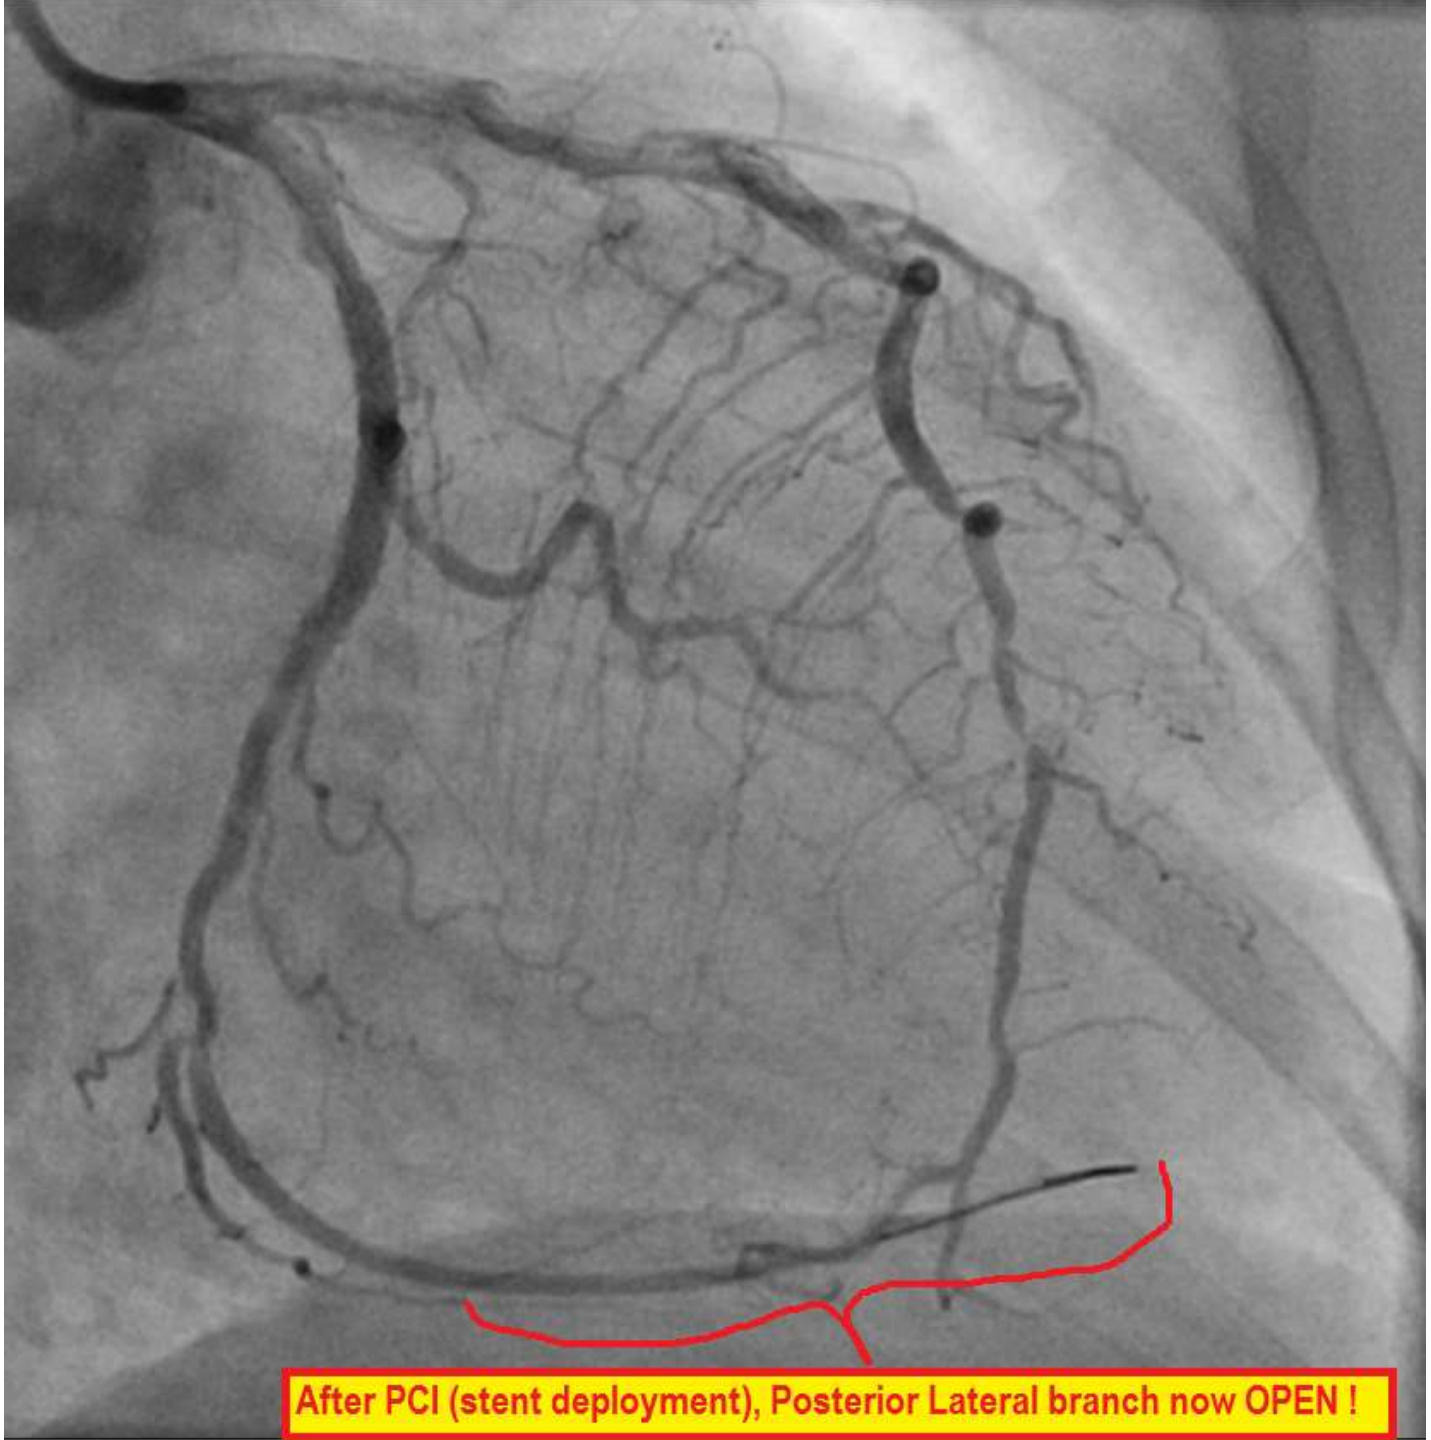
Upon seeing “Significant ST Elevation in TWO or more CONTIGUOUS LEADS, the ED physician diagnosed “Posterior Wall STEMI,” a STEMI Alert was issued, and the patient was taken immediately to the cardiac cath lab, where the following images were obtained…….



Sub-totally occluded Circumflex Artery
Blood flow stops here, in the Posterior Lateral branch ....



PCI balloon inflated here.....



After PCI (stent deployment), Posterior Lateral branch now OPEN !

# SUMMARY

- Whenever ST Depression is noted in Anterior Leads (V1-V4), it could indicate that Acute Posterior Wall STEMI is present.
- To rule-out Posterior Wall STEMI, a “posterior lead ECG” (V7 – V9) must be obtained.
- In THIS CASE, Posterior Wall STEMI was diagnosed via Posterior Lead ECG.
- **STEMI Alert was issued, with a Door-to-PCI time of 53 minutes.**

# OLD POSTERIOR MI - features

# INFARCTION

AS MYOCARDIAL CELLS BECOME NECROTIC ---

IN THE V LEADS:

POSTERIOR WALL MI

- S-T SEGMENTS return to normal
- TALL R-WAVES FORM V1, V2, V3
- R-WAVE PROGRESSION becomes EARLY
