MED FLEET AMBULANCE

The Lifesaving 12 Lead ECG

Part 1

Presented by:

Wayne W Ruppert, CVT, CCC, NREMT-P

Welcome !

Wayne Ruppert – Bio:

- 1978 First Responder (EMR Equivalent)
- 1980 EMT Pennsylvania
- 1982 - 1996 Paramedic (PA, NREMT, VA, FL)
- 1996 - 2012 Interventional Cardiovascular Technologist, Cardiac Cath Lab & Electrophysiology (EP) Lab
- 2012 - 2023 Cardiovascular Accreditations Regional Director, Bayfront Hosptials
- PRESENT: ALS Coordinator, MedFleet

Paramedics Christ Megoulas and Wayne Ruppert, Hershey, PA Fire Department, 1982

54 y/o male

CAO x 4, anxious and restless.

Clutching chest.

Skin ashen, diaphoretic, cold

C/O "susternal chest pressure" x 1 hour.

“The Integrated, Lifesaving Lead ECG”

There are multiple applications for the 12 Lead ECG, just as there are multiple facets for learning how to interpret 12 Lead ECGs. This course focuses on ECG diagnostic indicators of:

"The Integrated, Lifesaving Lead ECG"

There are multiple applications for the 12 Lead ECG, just as there are multiple facets for learning how to interpret 12 Lead ECGs. This course focuses on ECG diagnostic indicators of:

- Acute Coronary Syndromes
  - STEMI
  - NSTEMI
  - Unstable Angina
  - Low Risk Chest Pain

"The Integrated, Lifesaving Lead ECG"

There are multiple applications for the 12 Lead ECG, just as there are multiple facets for learning how to interpret 12 Lead ECGs. This course focuses on ECG diagnostic indicators of:

- Acute Coronary Syndromes
- Sudden Arrhythmia Death Syndromes (SADS)
  - Long QT Syndrome (LQTS)
  - Brugada Syndrome (BrS)
  - Hypertrophic Cardiomyopathy (HCM)
  - Arrhythmogenic Right Ventricular Dysplasia (ARVD)
  - Catecholinergic Polymorphic Ventricular Tachycardia (CPVT)
  - Wolff-Parkinson-White (WPW) Syndrome

"The Integrated, Lifesaving Lead ECG"

There are multiple applications for the 12 Lead ECG, just as there are multiple facets for learning how to interpret 12 Lead ECGs. This course focuses on ECG diagnostic indicators of:

- Acute Coronary Syndromes
- Sudden Arrhythmia Death Syndromes (SADS)

This course DOES NOT include many "traditional ECG course contents," such as Fascicular Blocks, Chamber Hypertrophy, & other "less lethal cardiac abnormalities." Our 3 day course covers all of this and more.

Source of Curriculum:

- Case Studies from Cardiac Catheterization and Electrophysiology Labs, 1996 – Present

Source of Curriculum:

- Case Studies from Cardiac Catheterization and Electrophysiology Labs, 1996 – Present
- Current Evidence-based Research
  - Journal of the American College of Cardiology (JACC)
  - American Heart Association (AHA) Circulation
  - ACC/AHA Guidelines
  - New England Journal of Medicine

Source of Curriculum:

- Case Studies from Cardiac Catheterization and Electrophysiology Labs, 1996 – Present
- Current Evidence-based Research
  - Journal of the American College of Cardiology (JACC)
  - American Heart Association (AHA) Circulation
  - ACC/AHA Guidelines
  - New England Journal of Medicine
- Two peer reviewed, published textbooks

In the CARDIAC CATHETERIZATION LAB, we read our patients' 12 Lead ECGs and then evaluate their coronary arteries and ventricular function during angiography. Stated in plain English, ***we rapidly learn how to correlate 12 lead ECG findings with what's really going on inside our patients' hearts.*** Seeing ECGs from this perspective adds a new dimension to understanding the complex pathophysiologies of cardiovascular disease.

This book prepares you to:

- INTERPRET 12 Lead ECGs.
- ASSIMILATE DATA derived from the 12 Lead ECG into a comprehensive patient evaluation process designed to maximize diagnostic accuracy, while taking into consideration the 12 Lead ECGs inherent LACK of SENSITIVITY and SPECIFICITY.
- IDENTIFY 13 PATTERNS associated with myocardial ischemia and infarction, including the most subtle ECG changes often missed by clinicians and the ECG machine's computerized interpretation software.
- CORRELATE each lead of the ECG with specific regions of the heart – and the CORONARY ARTERIAL DISTRIBUTION that commonly supplies it. In cases of STEMI, this knowledge prepares you to ANTICIPATE the FAILURE OF CRITICAL CARDIAC STRUCTURES – often *BEFORE THEY FAIL.*

For those who need to master essential material quickly, this book has been written with an expedited learning" feature, *designed to make learning as easy as 1 2 3:*

1. **READ the YELLOW HIGHLIGHTED TEXT**
2. **STUDY the GRAPHIC IMAGES, PICTURES and ECGs**
3. **CORRECTLY ANSWER the REVIEW QUESTIONS at the end of each section.**

This is an invaluable resource for every medical professional who evaluates patients and reads their 12 lead ECGs:

- *Fellows in Emergency, Cardiology, and Family Medicine*
- *Medical Residents*
- *Veteran Physicians wanting a good review in ACS patient evaluation*
- *Physician Assistants and Nurse Practitioners*
- *Emergency Department Nurses*
- *Coronary Care Unit and Cardiac Telemetry Nurses*
- *Walk-in Clinic Physicians and Nurses*
- *Paramedics*

"I think this book will be a wonderful addition to the textbooks that are already available, with a fresh perspective'"

Joseph P. Ornato, MD, FACP, FACC, FACEP
- Professor and Chairman, Department of Emergency Medicine
Medical College of Virginia/Virginia Commonwealth University
- Medical Director, Richmond Ambulance Authority,
Richmond, Virginia

"This book integrates academic ECG principles with real-world clinical practice by incorporation of well chosen cath lab case studies into its curriculum. This combination lets readers see patients and their ECGs through the eyes of an experienced cath lab interventionalist, and provides a balanced approach to patient evaluation that compensates for the ECGs inherent lack of sensitivity and specificity. I highly recommend this book for all Emergency Medicine and Cardiology Fellows. For experienced clinicians, it's a superb review."

Humberto Coto, MD, FACP, FACC
- Chief of Interventional Cardiology
St. Joseph's Hospital
Tampa, Florida

PRIMARY JOB:

"PUMP BLOOD TO THE LUNGS AND THE REST OF THE BODY"

WHEN FUNCTIONING PROPERLY,

THE ATRIUM SUPPLY

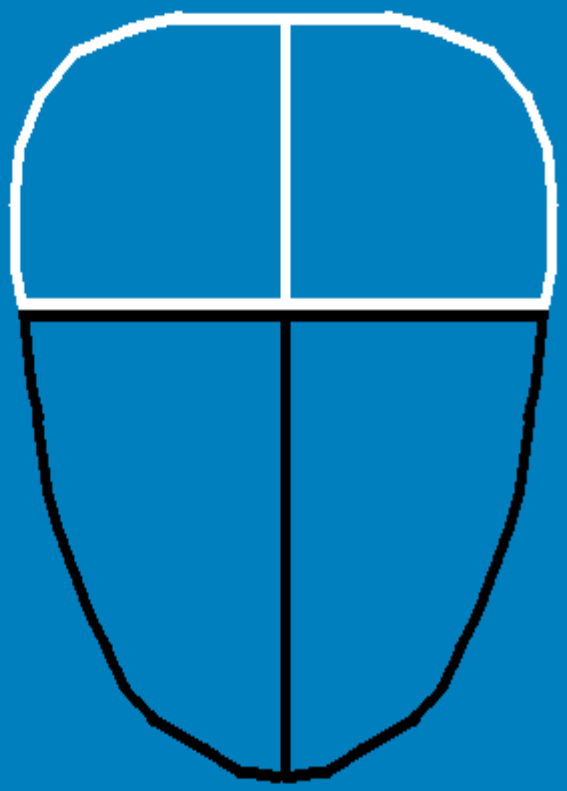
APPROXIMATELY

WHAT

PERCENTAGE

OF THE

CARDIAC OUTPUT ?



WHEN FUNCTIONING PROPERLY,

THE ATRIUM SUPPLY

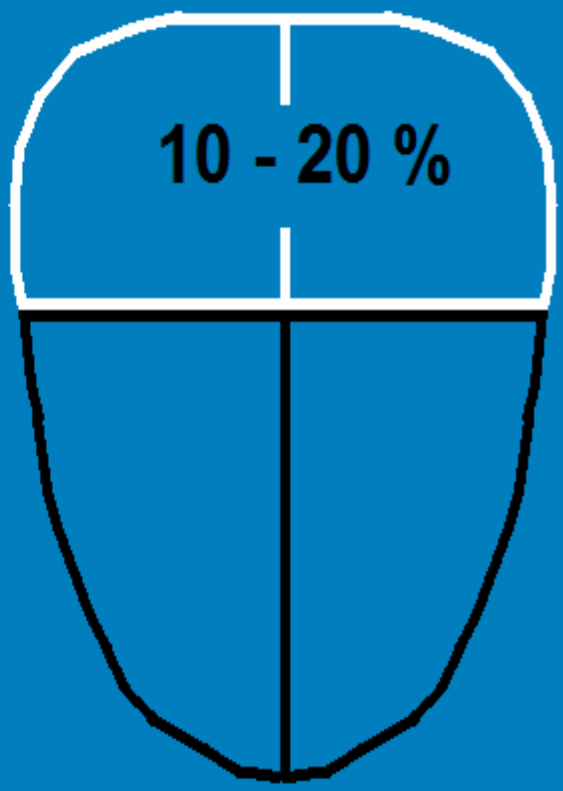
APPROXIMATELY

WHAT

PERCENTAGE

OF THE

CARDIAC OUTPUT ?



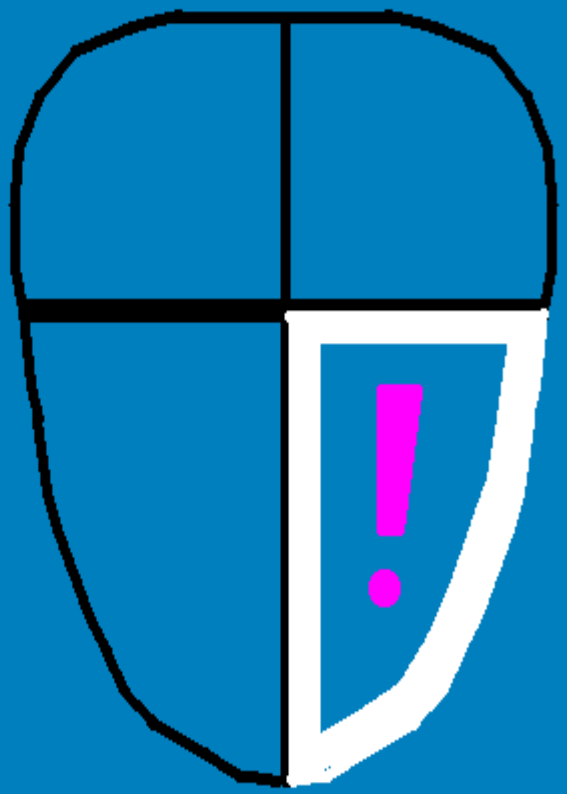
THE CHAMBER MOST IMPORTANT TO KEEPING THE PATIENT ALIVE

(and the ONLY one you can't live without)

IS THE

LEFT VENTRICLE

WHICH WE WILL REFER TO AS **THE PUMP**



Cardiac A & P “101”...

- Heart structure – basic 4 chambers
- **Action Potential of Ventricular Muscle Cells**

CARDIAC ANATOMY and PHYSIOLOGY "101"

CARDIAC CELLS AT REST have POSITIVE charged IONS on the OUTSIDE of the cell membrane, and NEGATIVE charged IONS on the INSIDE

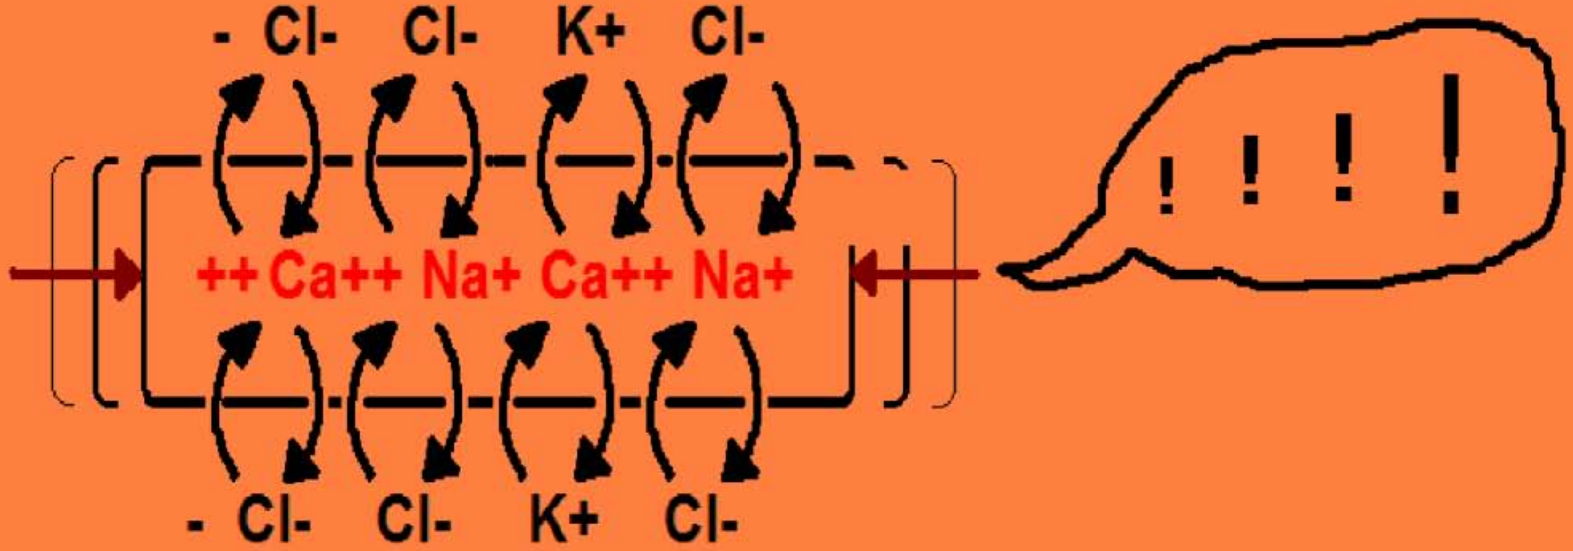
Ca++ Na+ Ca++ Na+ Ca++

Cl- Cl- K+ Cl- K+ Cl- K+ Cl-

Ca++ Na+ Ca++ Na+ Ca++

CARDIAC ANATOMY and PHYSIOLOGY "101"

. . . when the IONS shift . . . that is, the POSITIVE IONS that were on the outside TRADE PLACES with the NEGATIVE IONS that were on the INSIDE . . . .



. . . THE CELL CONTRACTS!

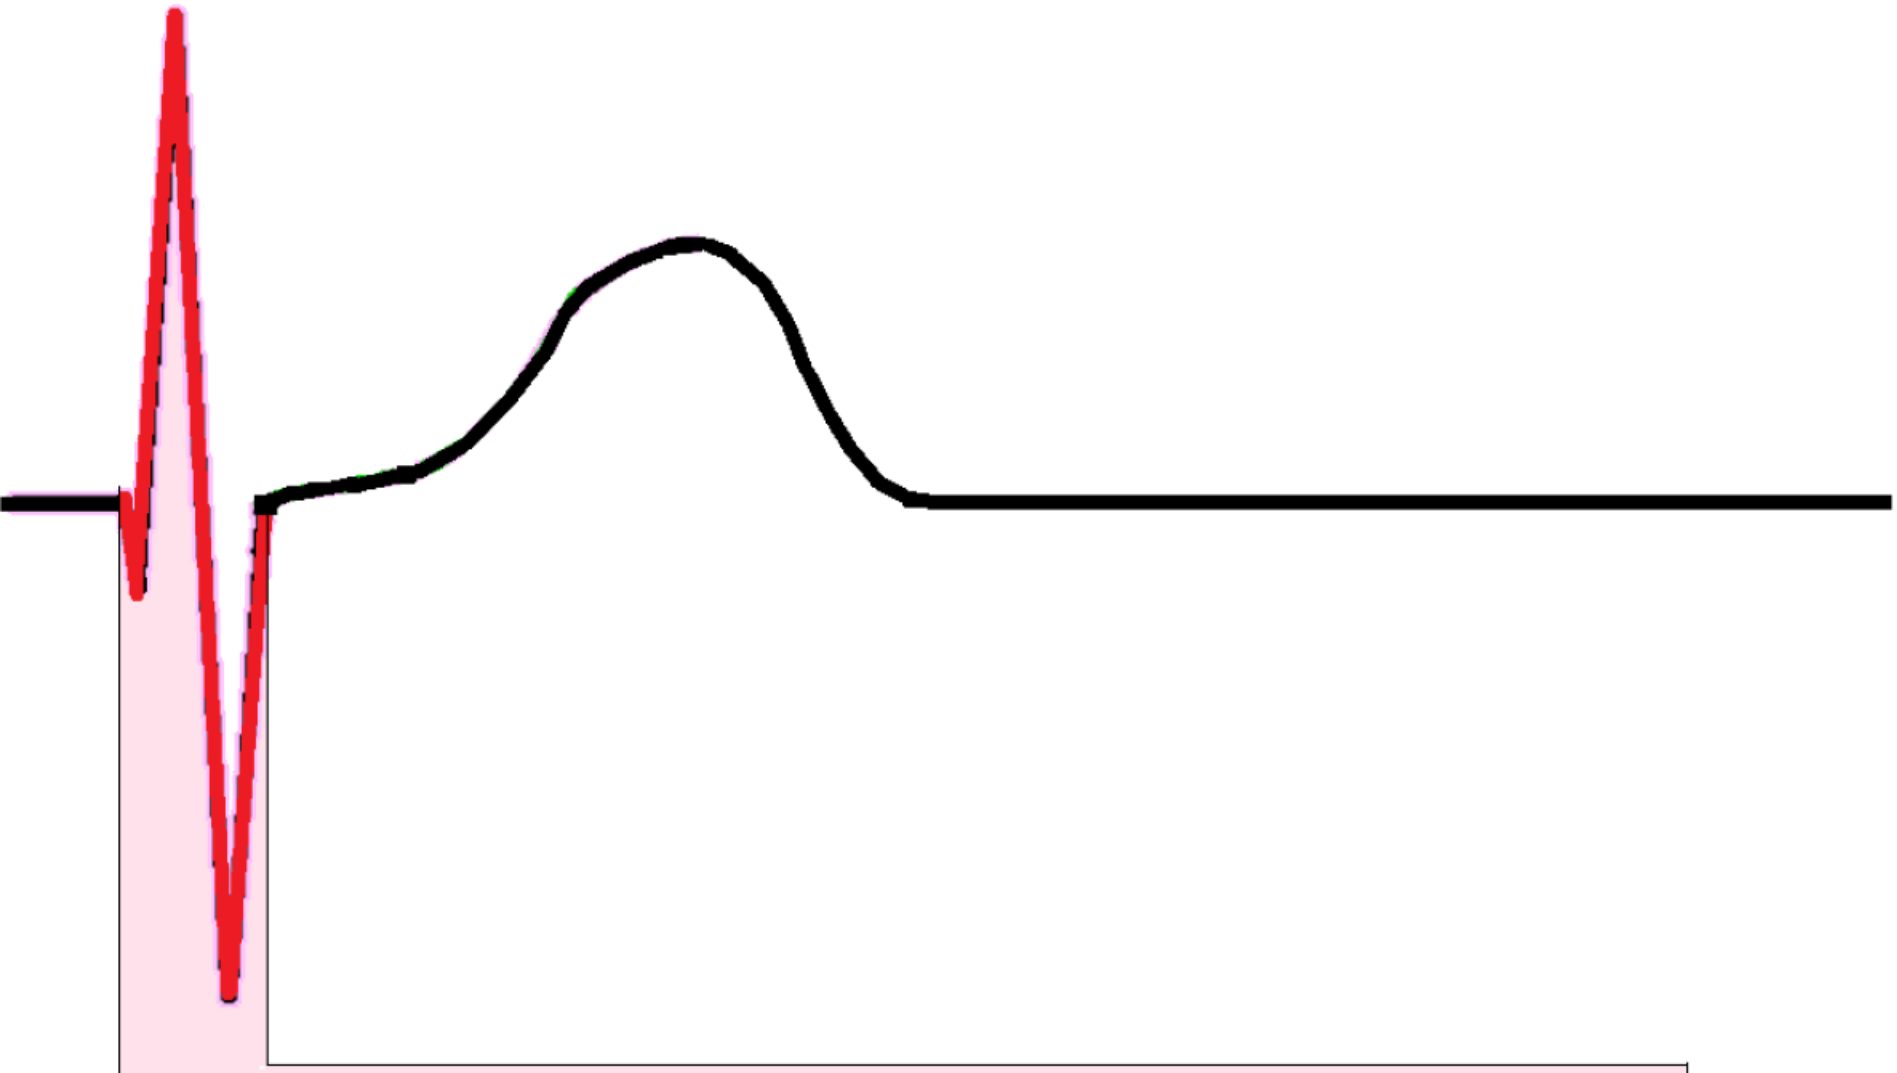
THIS (OF COURSE) IS KNOW AS . . .

DEPOLARIZATION

WHEN EVERYTHING IS WORKING PROPERLY, THE WAVE OF DEPOLARIZING CELLS CAUSES THE HEART TO CONTRACT, AND PUMP BLOOD TO THE LUNGS AND THE SYSTEMIC CIRCULATION

Ventricular Depolarization:

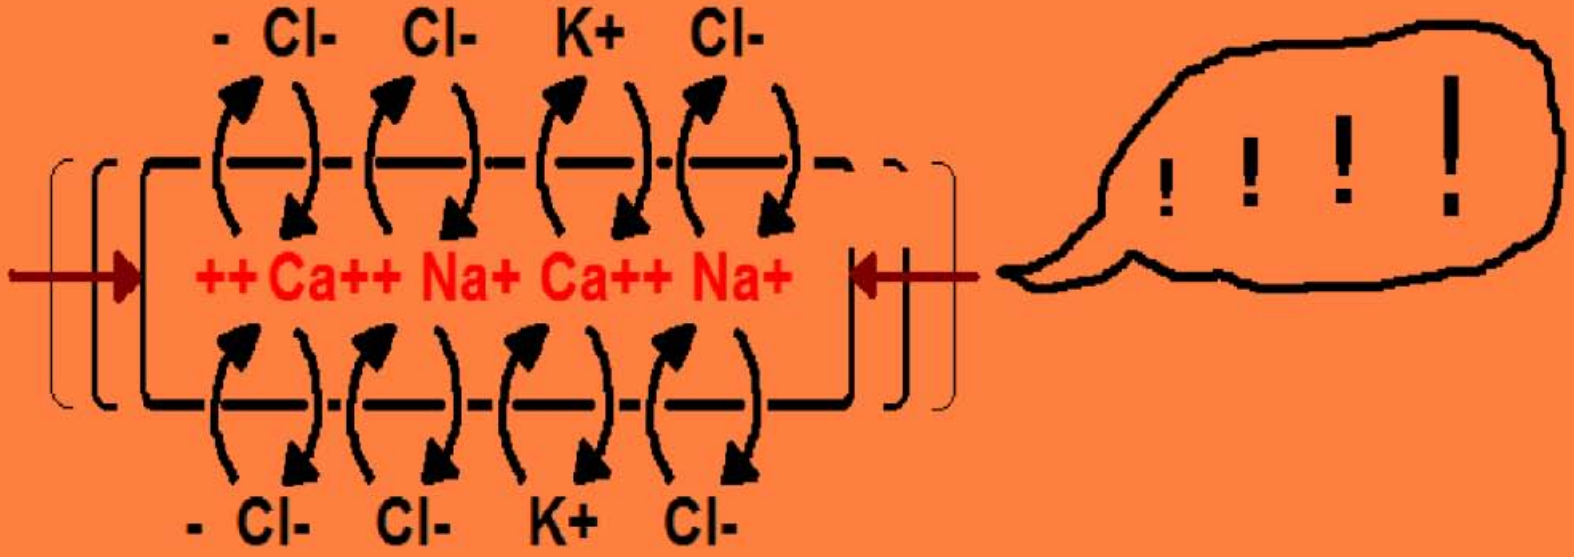
- Is represented by the **QRS Complex**



QRS Complex = Ventricular Depolarization

CARDIAC ANATOMY and PHYSIOLOGY "101"

. . . when the IONS shift . . . that is, the POSITIVE IONS that were on the outside TRADE PLACES with the NEGATIVE IONS that were on the INSIDE . . . .



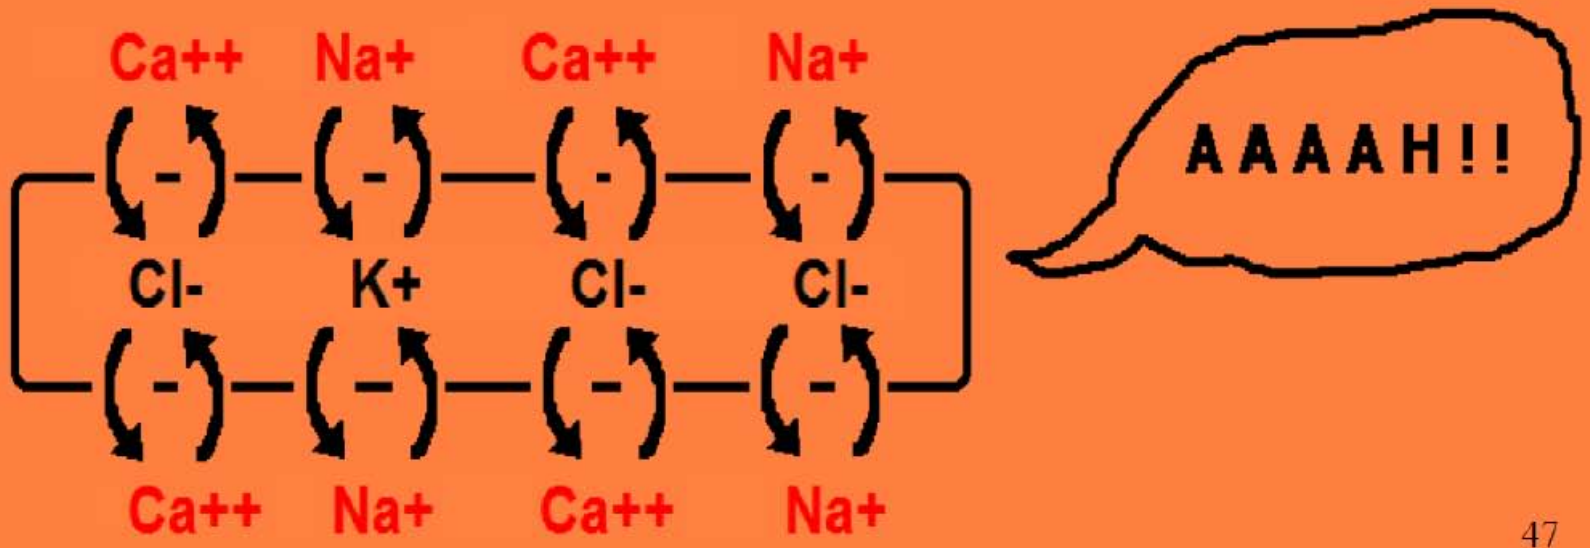
. . . THE CELL CONTRACTS!

CARDIAC ANATOMY and PHYSIOLOGY "101"

AFTER DEPOLARIZATION, THE CELLS RELAX.

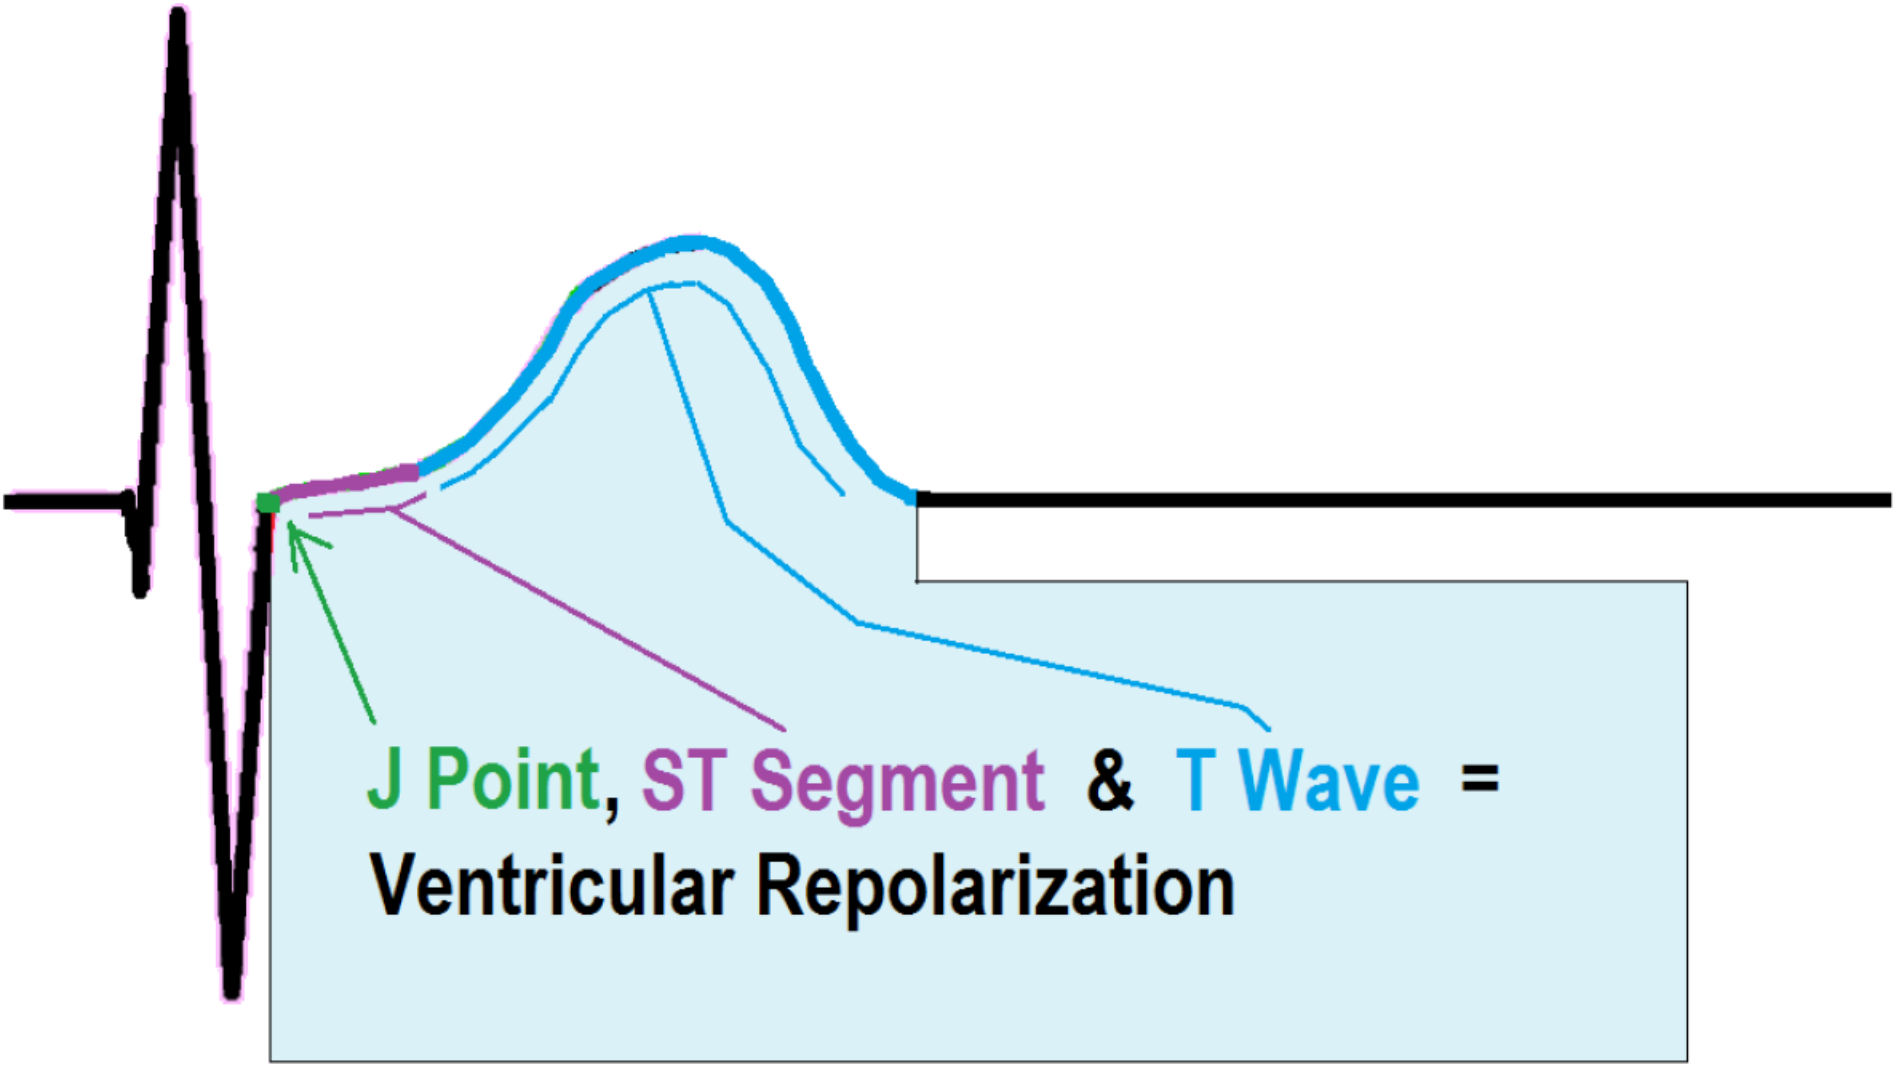
THE IONS RETURN TO THEIR ORIGINAL POSITIONS --

THIS PROCESS IS KNOWN AS REPOLARIZATION

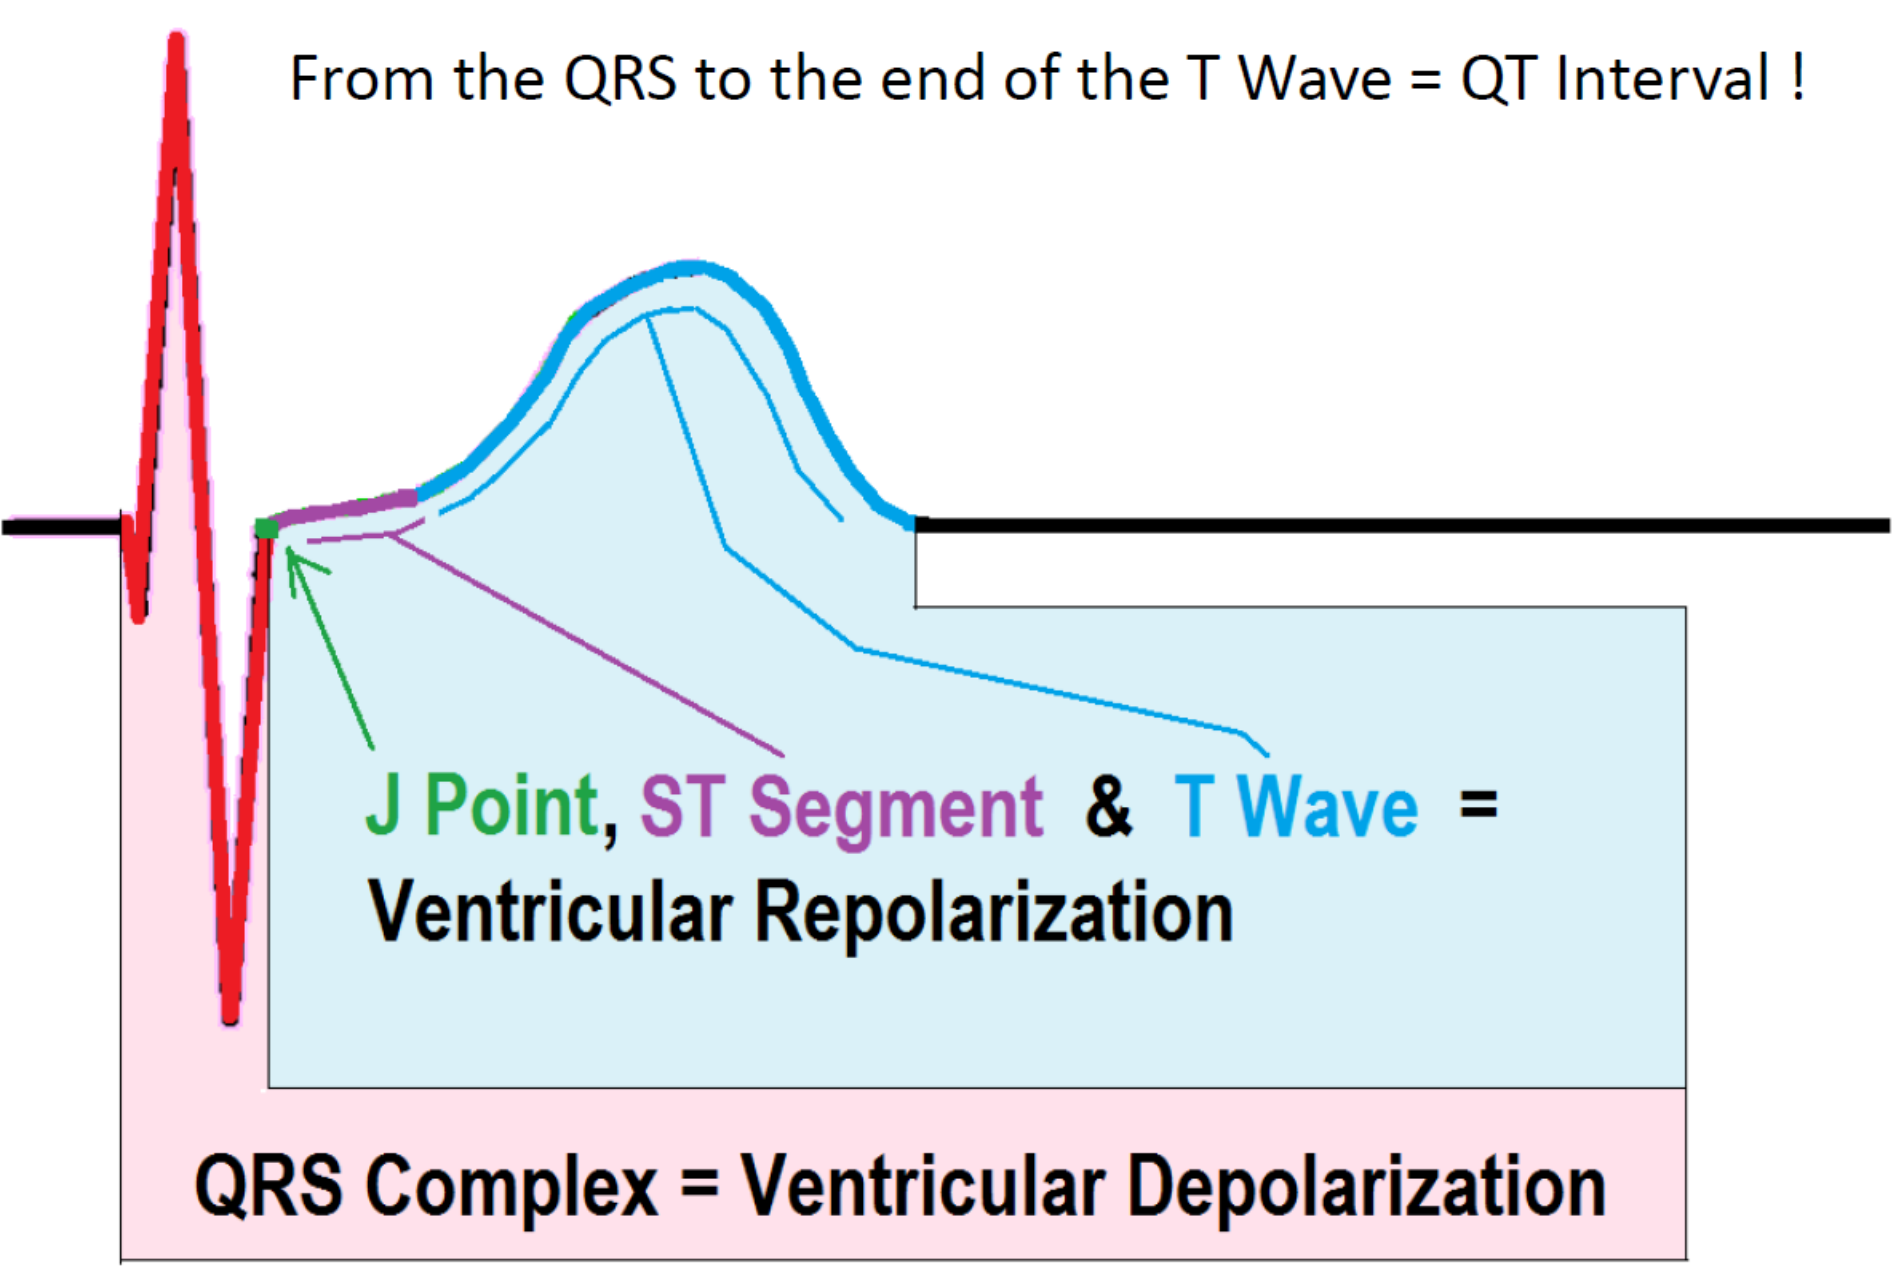


Repolarization on the ECG:

- Is represented by the:
  - **J Point**
  - **ST Segment**
  - **T Wave**



J Point, ST Segment & T Wave =
Ventricular Repolarization

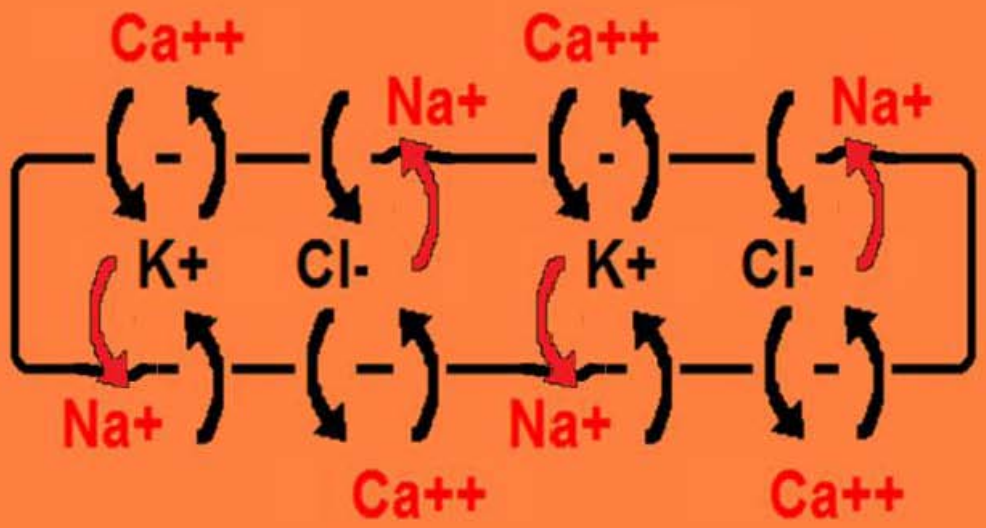


From the QRS to the end of the T Wave = QT Interval !
J Point, ST Segment & T Wave =
Ventricular Repolarization
QRS Complex = Ventricular Depolarization

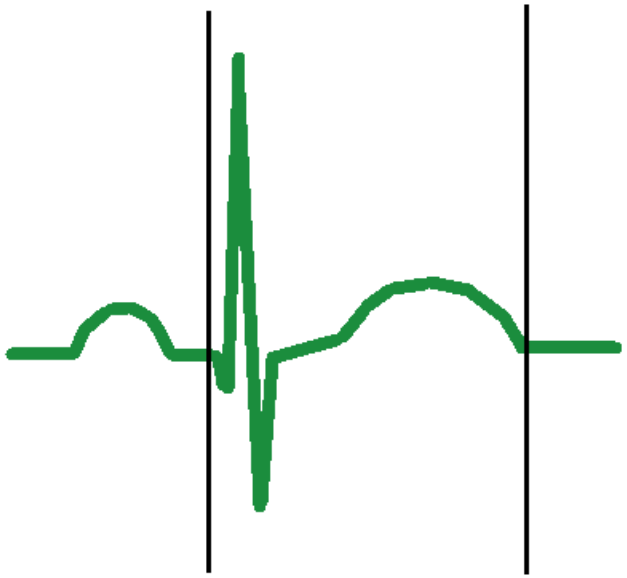
CARDIAC ANATOMY and PHYSIOLOGY "101"

When ION CHANNELS are MALFORMED, the abnormal channel shape may DELAY the transfer of IONS . . . . .

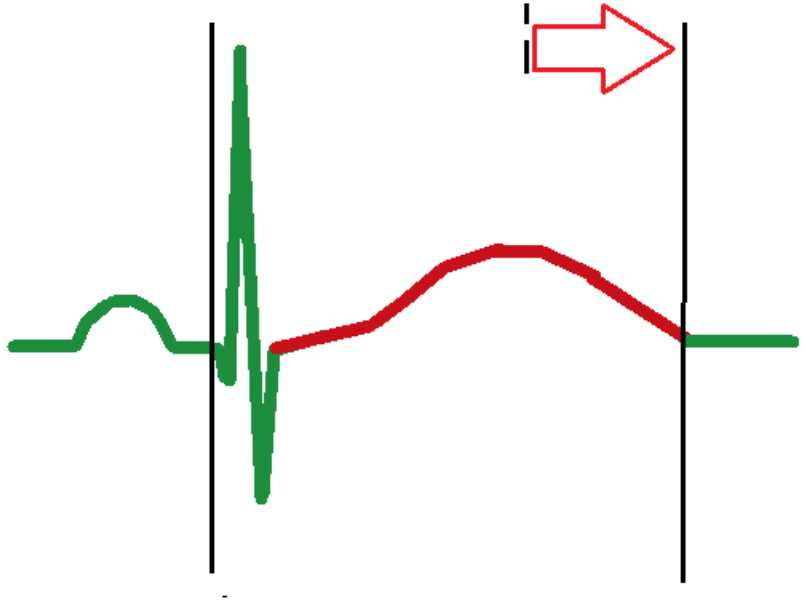
. . . . this can DELAY REPOLARIZATION, which will show on the ECG as "QT Prolongation"



Normal
QT Interval



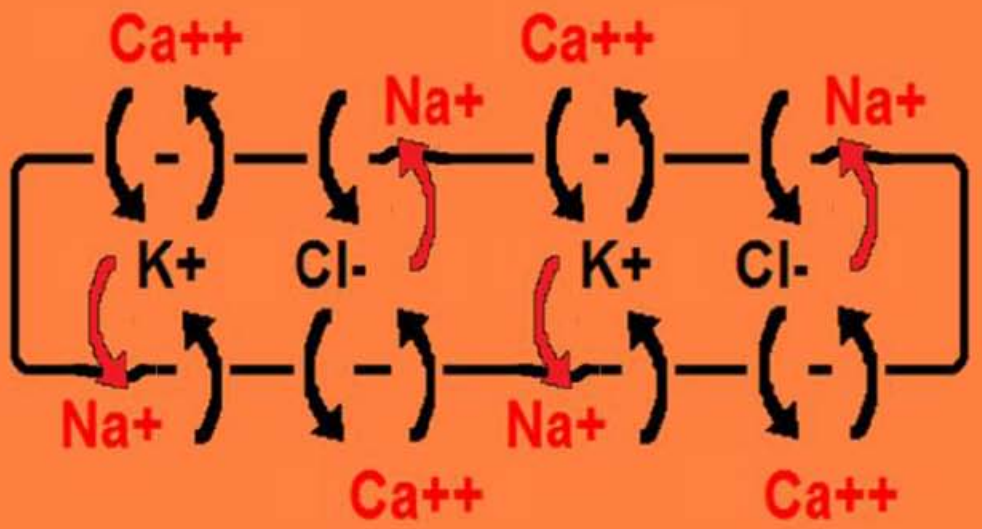
ABNORMAL
(prolonged)
QT Interval



CARDIAC ANATOMY and PHYSIOLOGY "101"

When ION CHANNELS are MALFORMED, the abnormal channel shape may DELAY the transfer of IONS . . . . .

. . . . this can DELAY REPOLARIZATION, which will show on the ECG as "QT Prolongation"



which can lead to Torsades . . . Cardiac Arrest . . . and *SUDDEN DEATH.*

EID:18 EDT: 16:01 17-MAY-1997 ORDER:

Patient Profile: Wolff-Parkinson-White:

- Typically Pediatric / Young Adult
- May not know they have it
- May experience episodes of "palpitations" or "Very Fast Heartbeat."

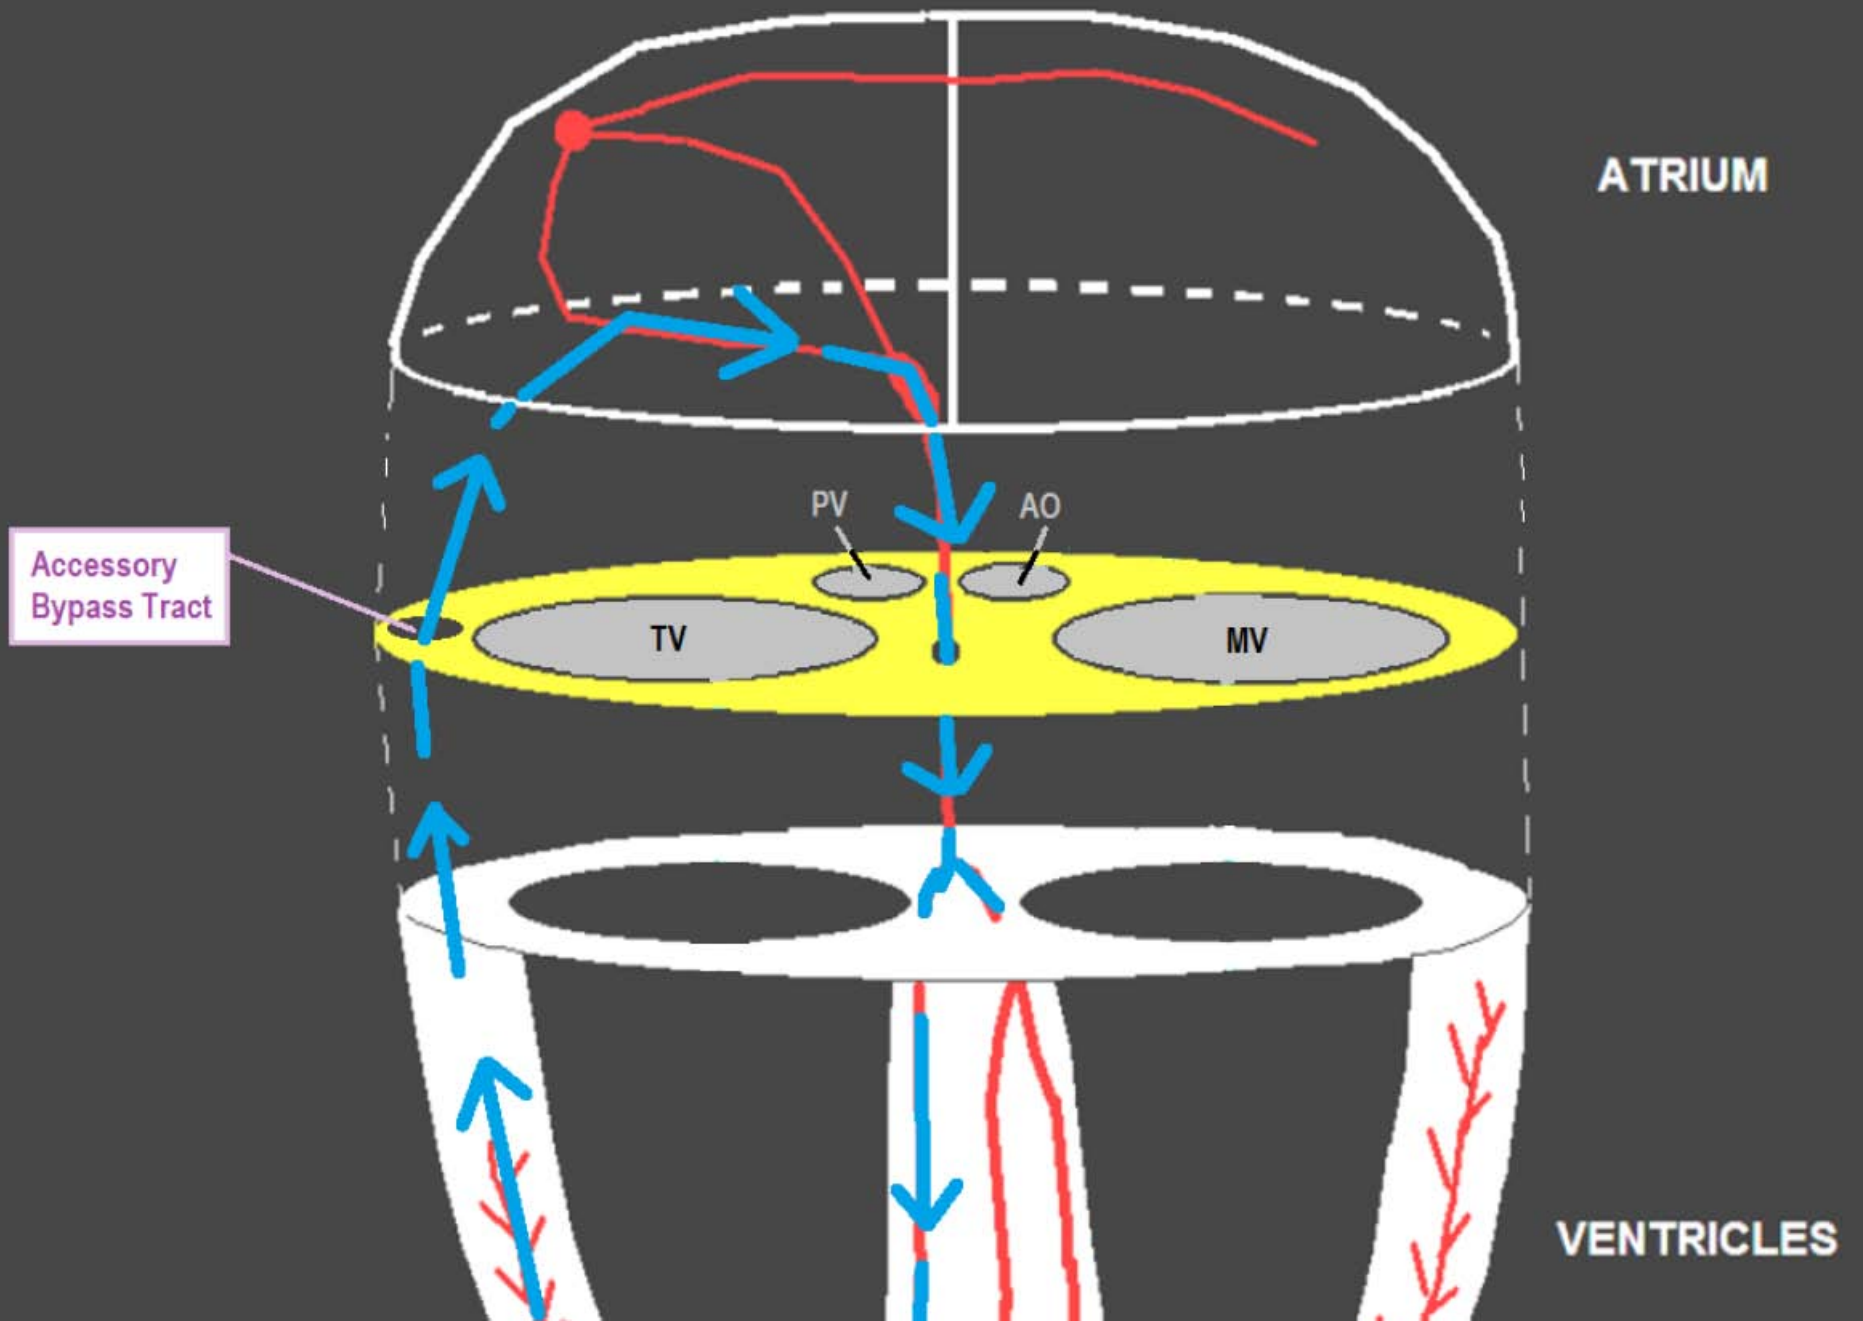
W-P-W may CAUSE A-fib with RVR.

Patients may present with symptoms of "palpitations," "heart racing," "light-headedness," or "passing out" . . . . . .

Patients with Bypass Tract Physiology (W-P-W) may present with:

- **Narrow QRS Tachycardia (SVT)**

Orthodromic Bypass Tract Tachycardia



SVT

- SVT has numerous causes, including
  - Ectopic Atrial Tachycardia
  - AV Nodal Reentrant Tachycardia (Junctional)
  - Orthodromic Bypass Tract Tachycardia (WPW)
- EP study is often needed to diagnose etiology.

Patients with Bypass Tract Physiology (W-P-W) may present with:

- Narrow QRS Tachycardia (SVT)
- **Wide QRS Tachycardia (mimics V-tach)**

Antedromic Bypass Tract Tachycardia

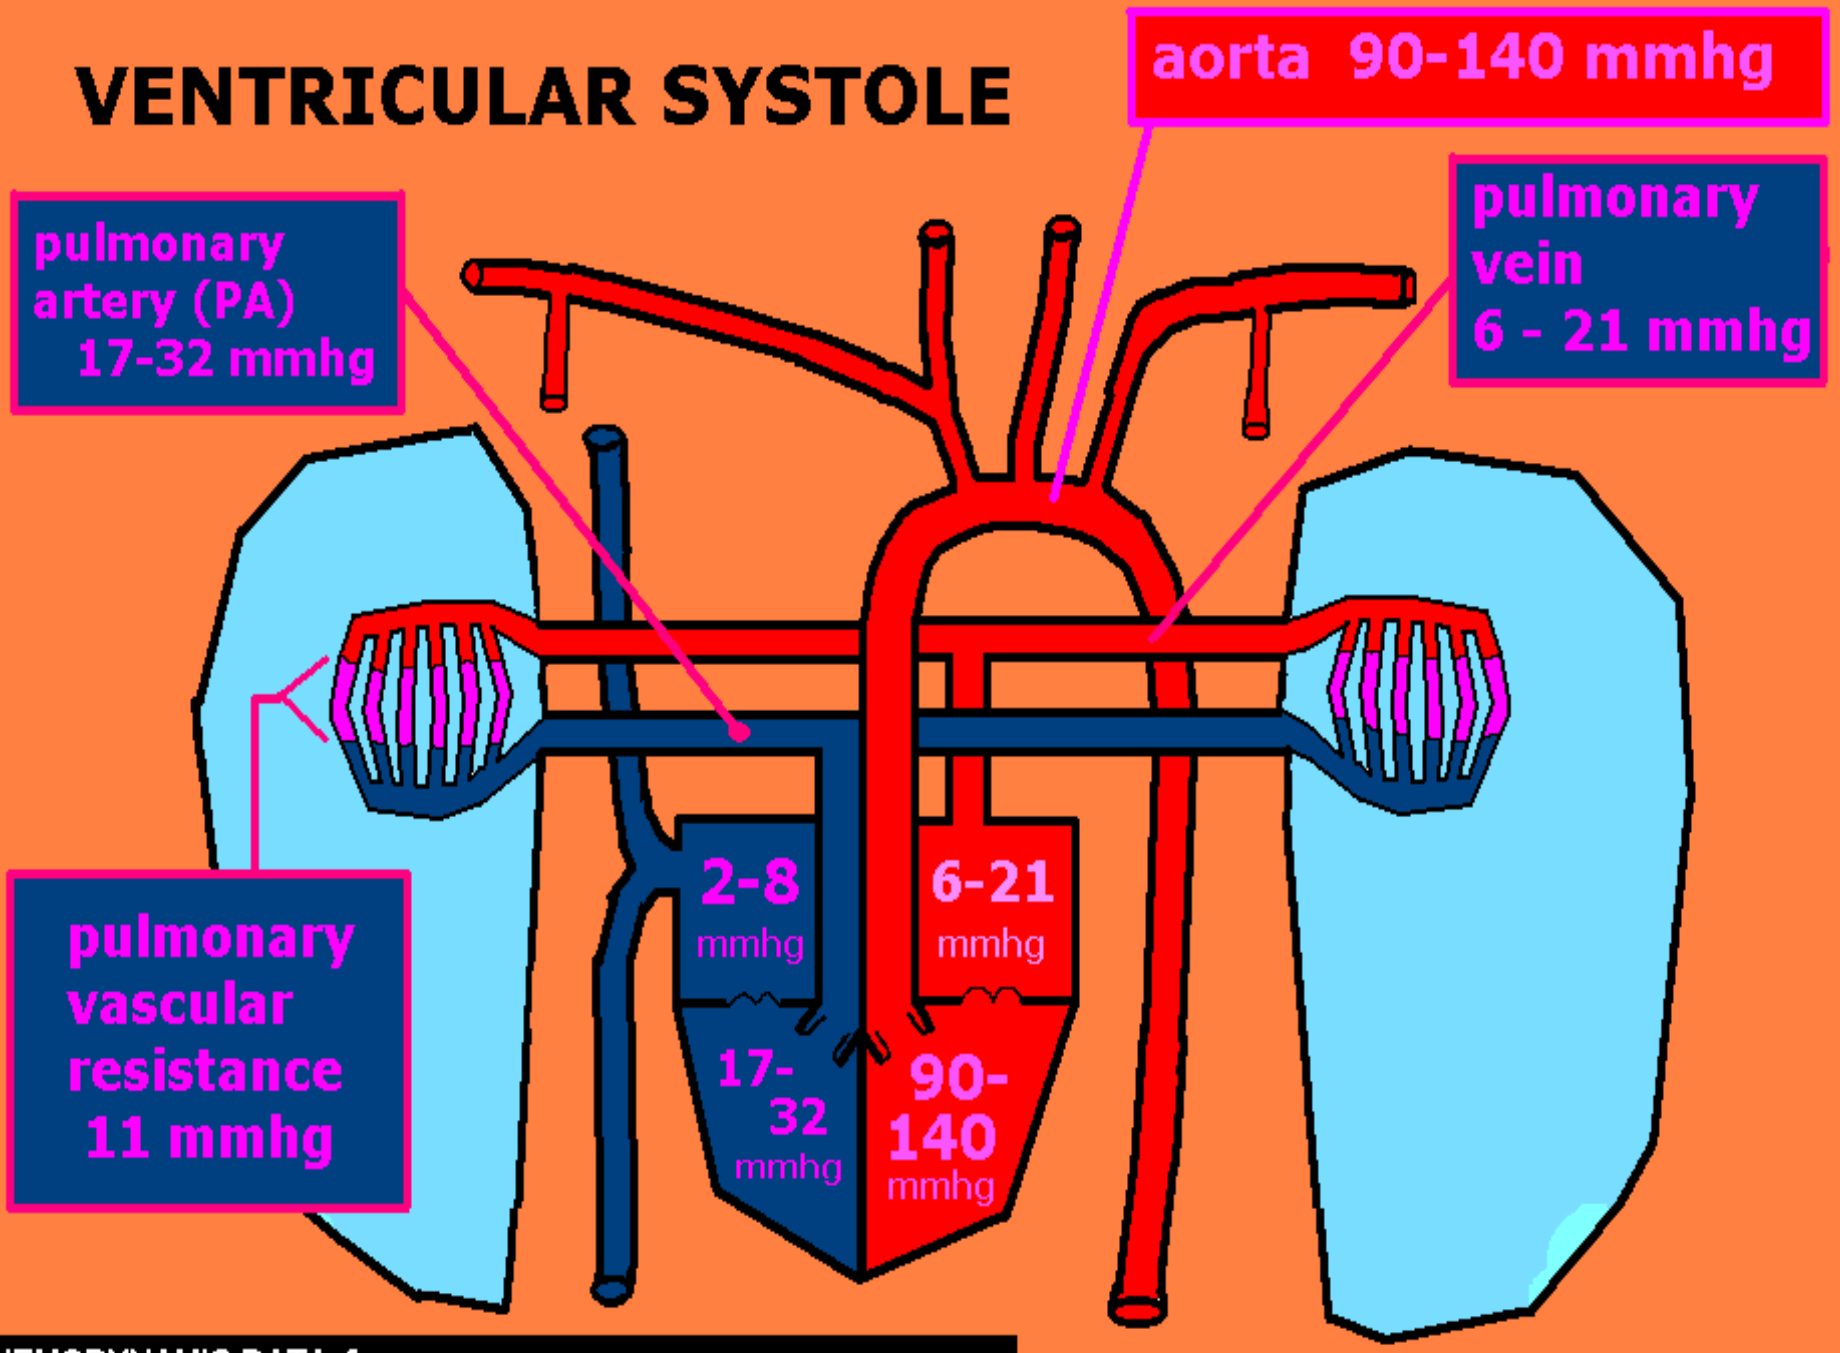
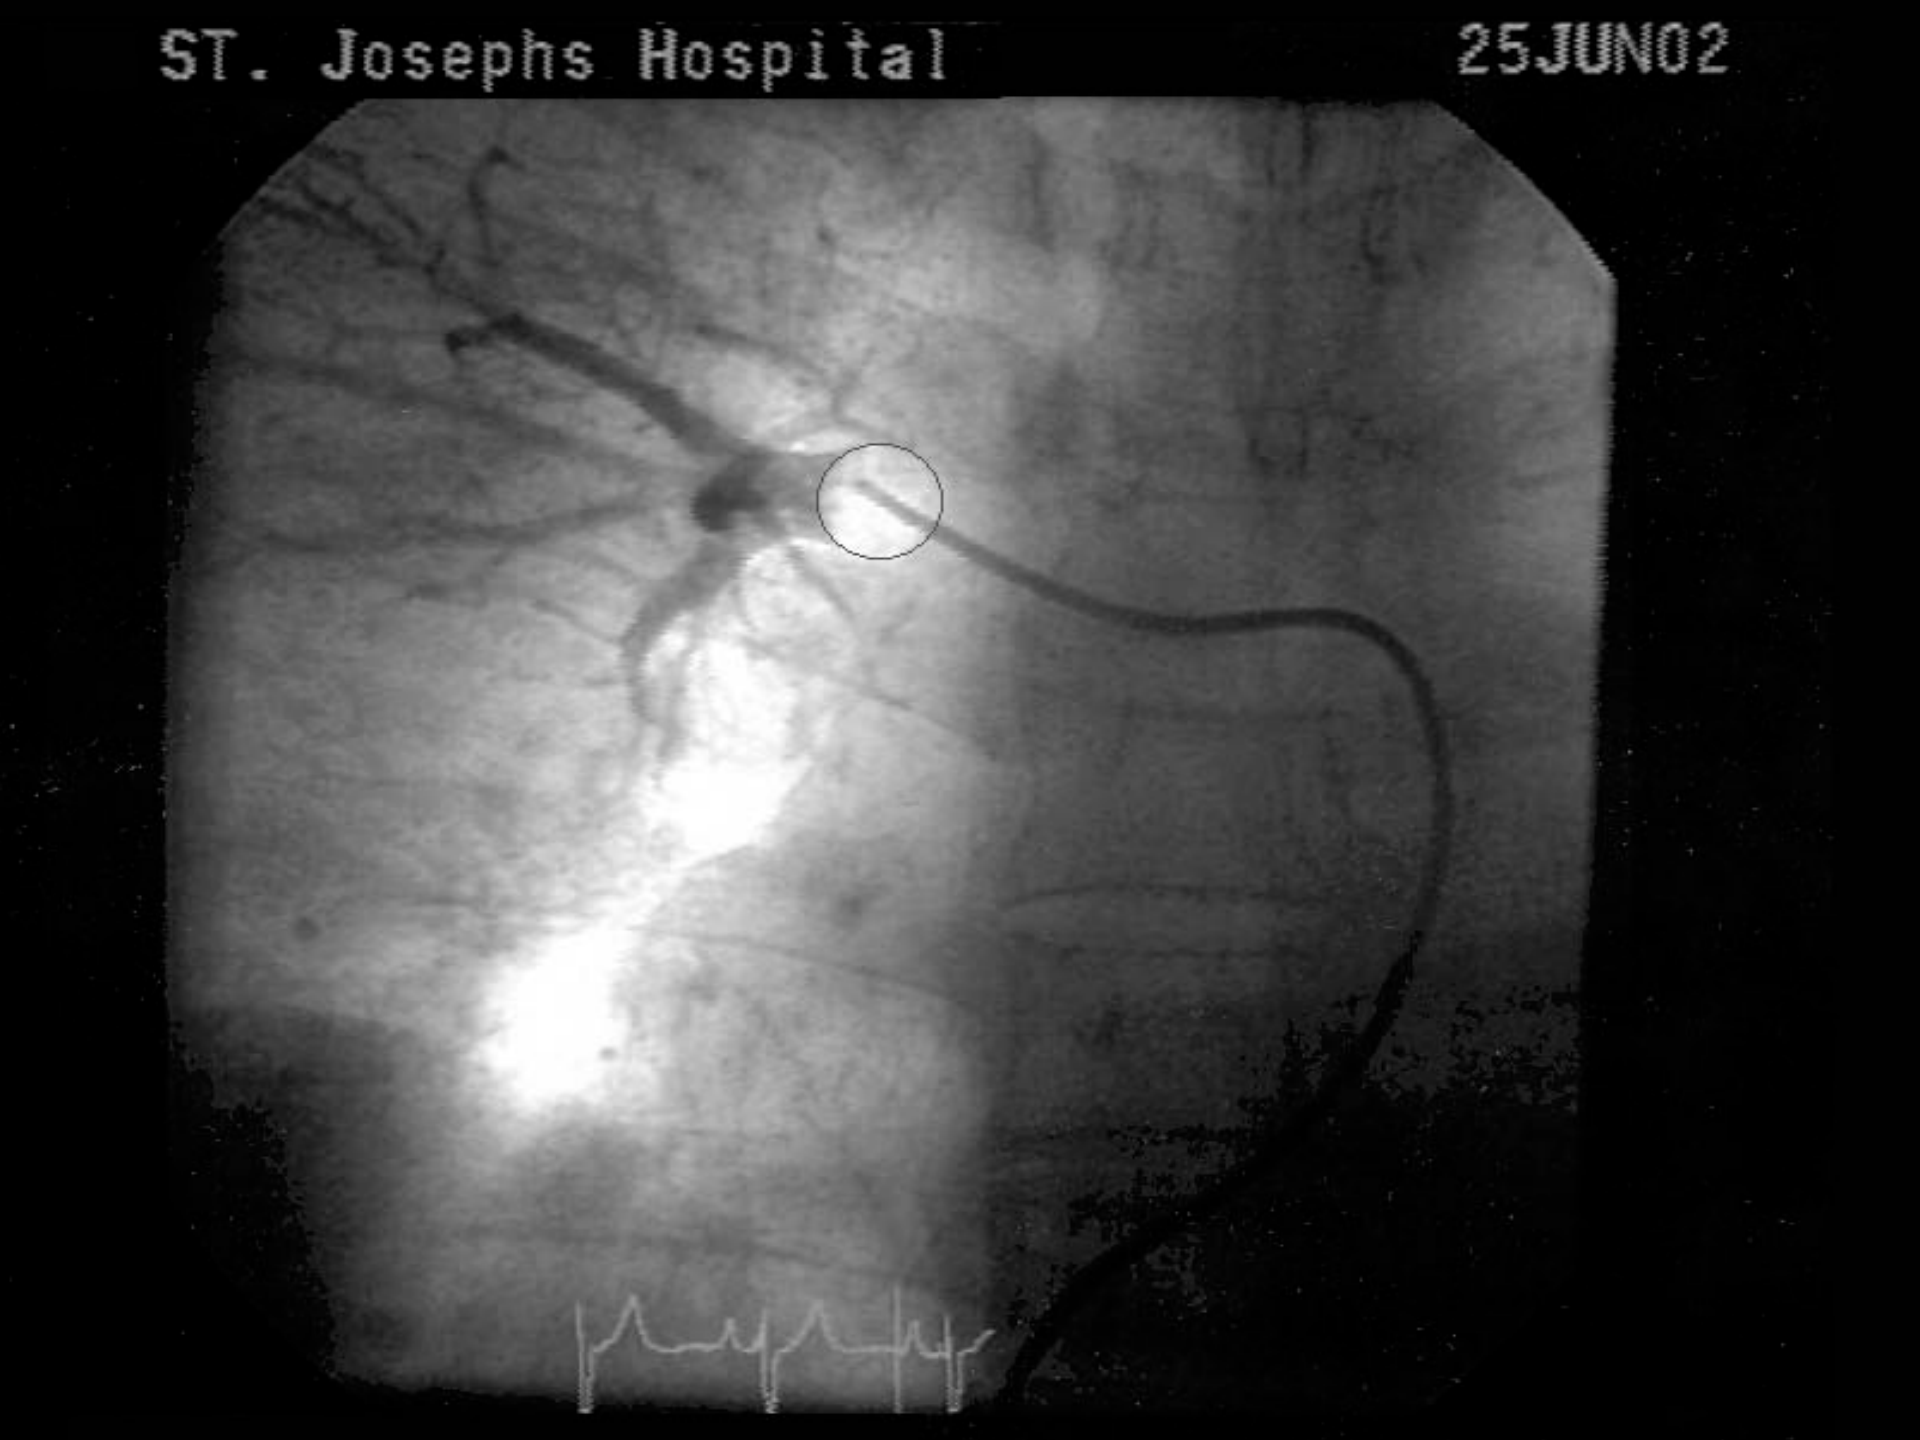
VENTRICULAR SYSTOLE

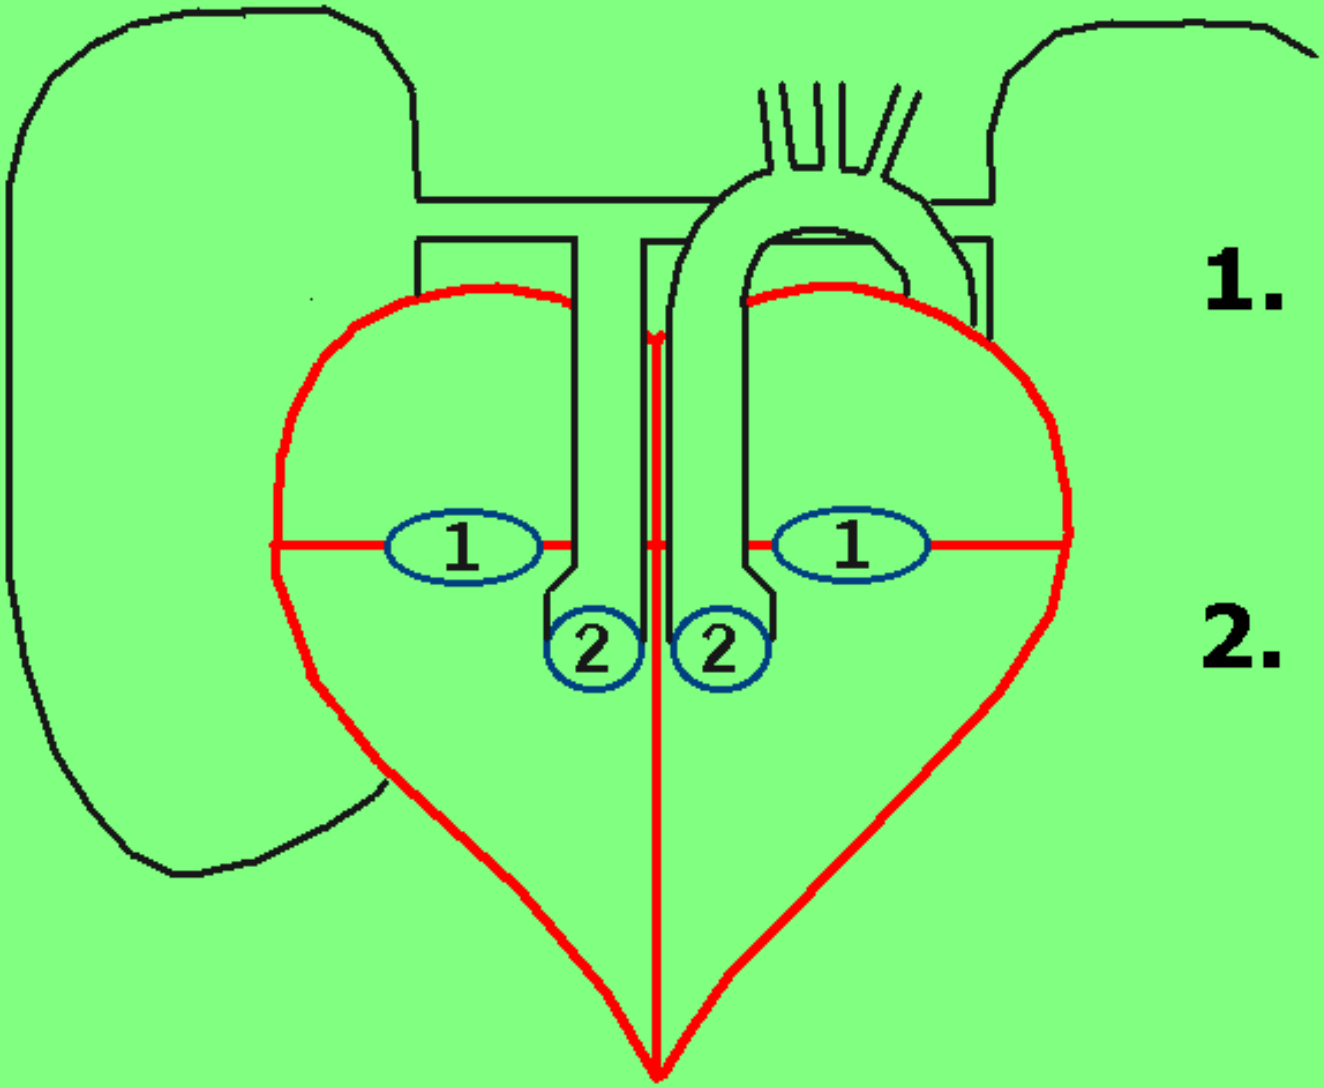


HEMODYNAMIC DATA from:
"The Cardiac Catheterization Handbook," Morton J. Kearn, MD



ST. Josephs Hospital
25JUN02

HEART VALVES

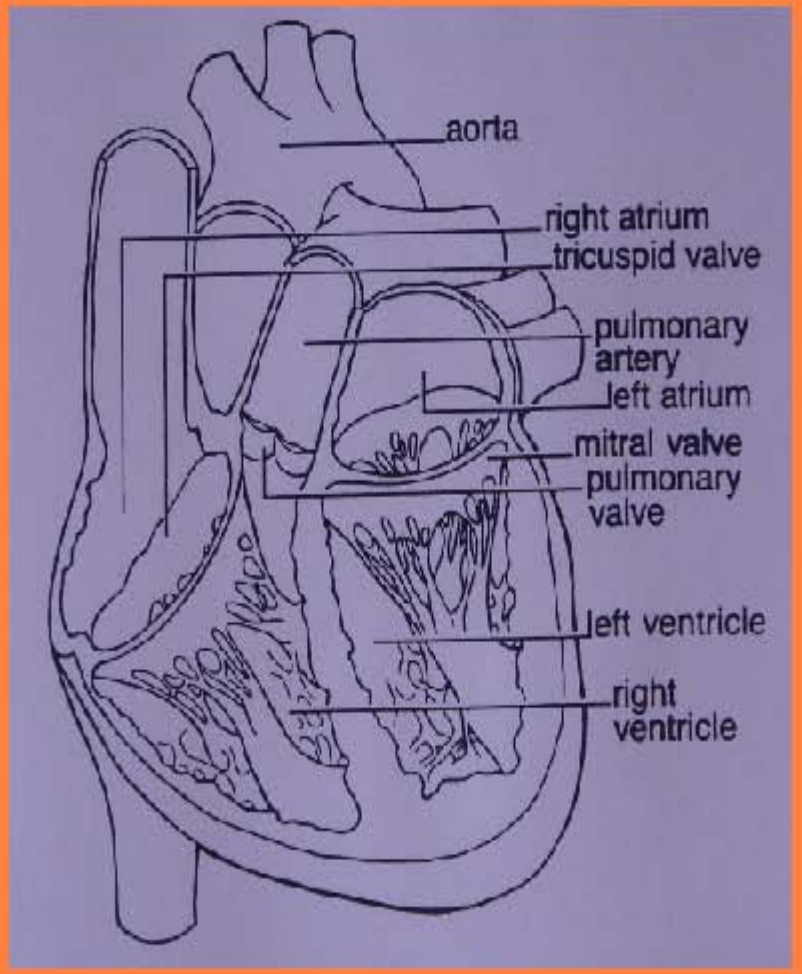


1. A-V VALVES

2. SEMI-LUNAR VALVES

THE ATRIO-VENTRICULAR VALVES

- ARE SECURED TO THE INFERIOR WALL OF THE HEART BY THE PAPILLARY MUSCLES



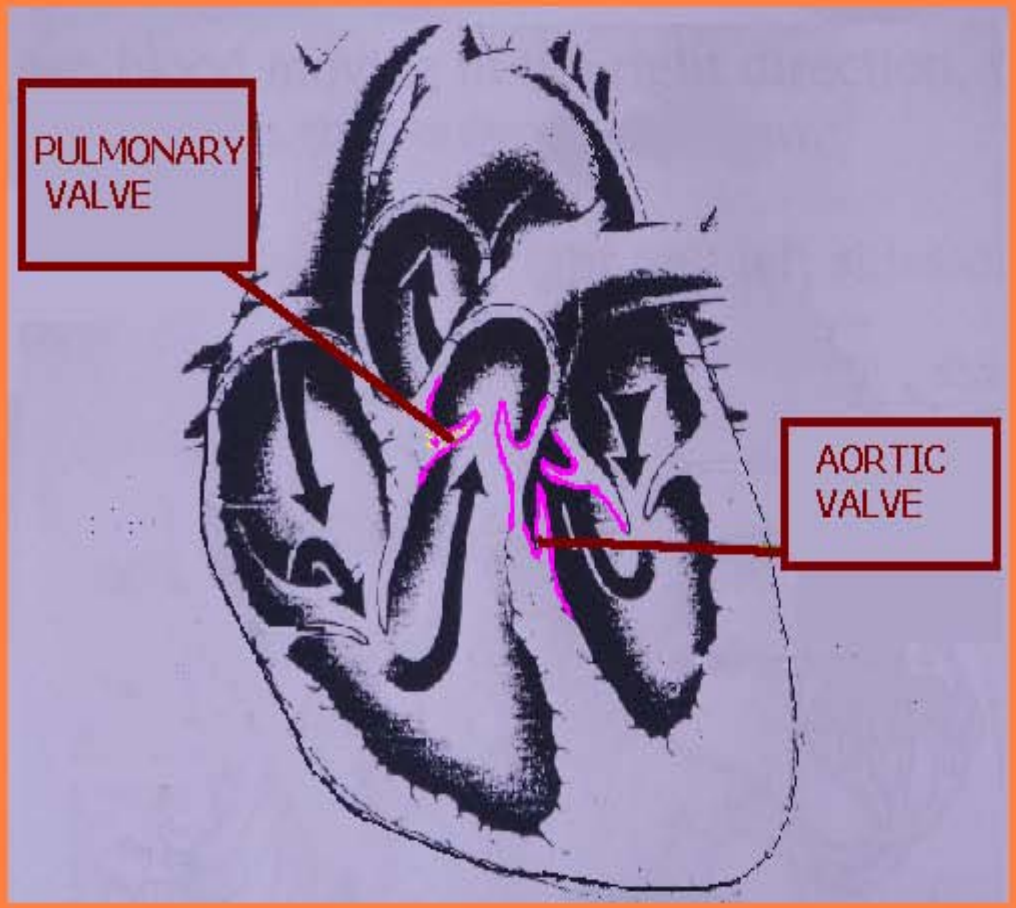
THE ATRIO-VENTRICULAR VALVES

VULNERABLE TO DAMAGE FROM TISSUE NECROSIS, SUCH AS FROM EXTENSIVE MI.

THE SEMI-LUNAR VALVES

PREVENT BACK-FLOW OF BLOOD AFTER SYSTOLE.

ARE NOT AS VULNERABLE TO DAMAGE FROM MI AS THE AV VALVES.



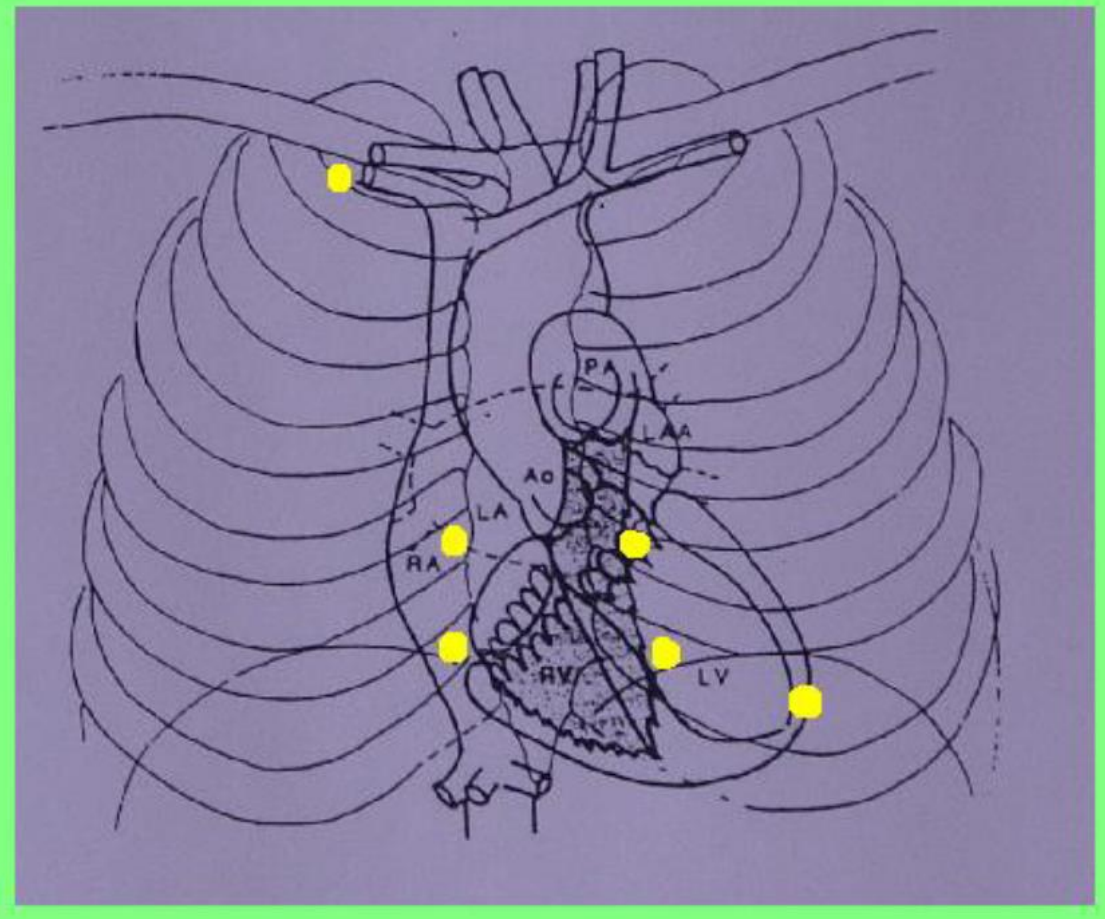
VERY BASIC HEART SOUNDS ASSESSMENT

ABNORMAL EKG CHANGES THAT MAY PRESENT WITH ABNORMAL HEART SOUNDS:

- ACUTE MI
- CHAMBER HYPERTROPHY
- RECENT MI (NECROSIS)
- PERICARDITIS

HEART SOUNDS ASSESSMENT

HEART SOUNDS ASSESSMENT



VERY BASIC HEART SOUNDS ASSESSMENT

- Normal Heart Sounds
- Murmurs
  - systolic
  - diastolic
- Friction Rubs

SCOTT DAVIDSON, RN auscultating heart sounds at St. Joseph's Hospital Heart Institute Tampa, FL

HEART SOUNDS ASSESSMENT

HEART SOUNDS ARE GENERATED BY THE SOUND OF THE HEART VALVES CLOSING.

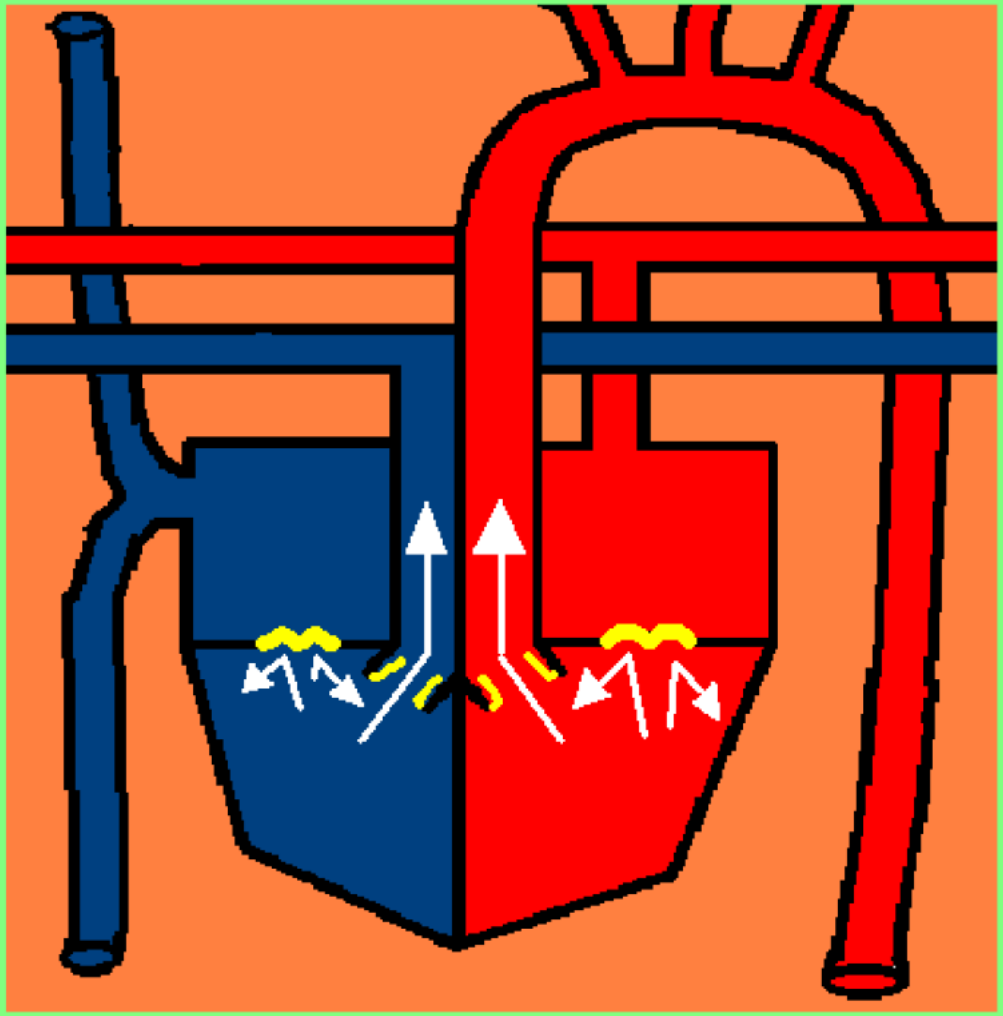
THERE ARE TWO NORMAL HEART SOUNDS, KNOWN AS: S-1 and S-2

WE OFTEN DESCRIBE THESE HEART SOUNDS AS "LUB - DUP"

HEART SOUNDS ASSESSMENT

S-1 BEGINNING OF SYSTOLE.

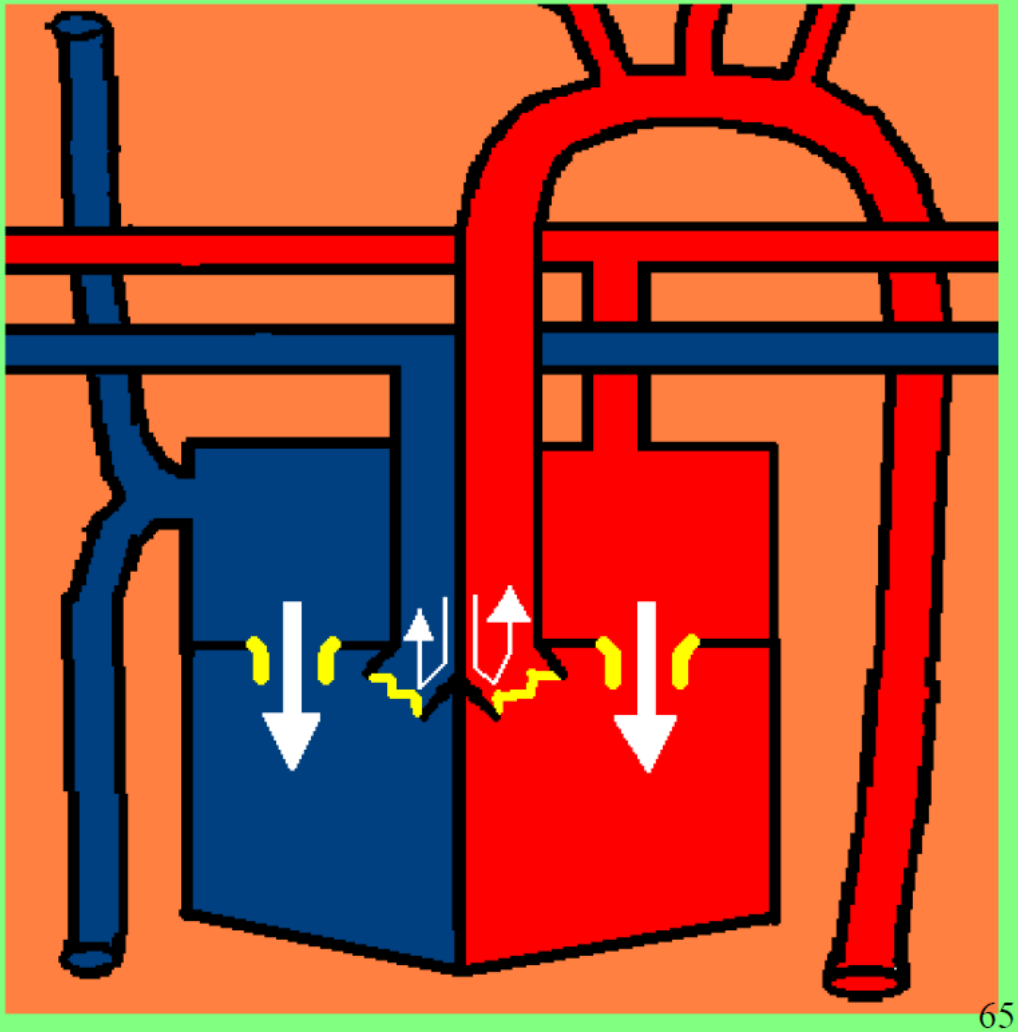
SOUND OF THE MITRAL AND TRICUSPID VALVES CLOSING.



HEART SOUNDS ASSESSMENT

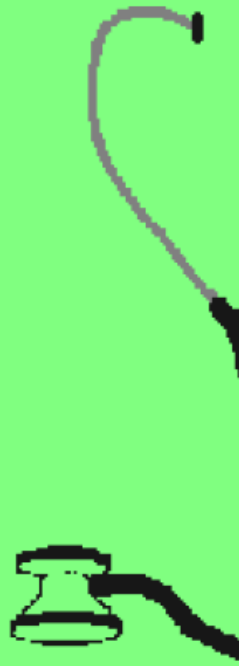
S-2 OCCURS AT THE END OF SYSTOLE (THE BEGINNING OF DIASTOLE).

IT IS THE SOUND OF THE AORTIC AND PULMONARY VALVES CLOSING.



MURMUR = "SWOOSH" SOUND CAUSED BY THE SOUND OF TURBULENCE.

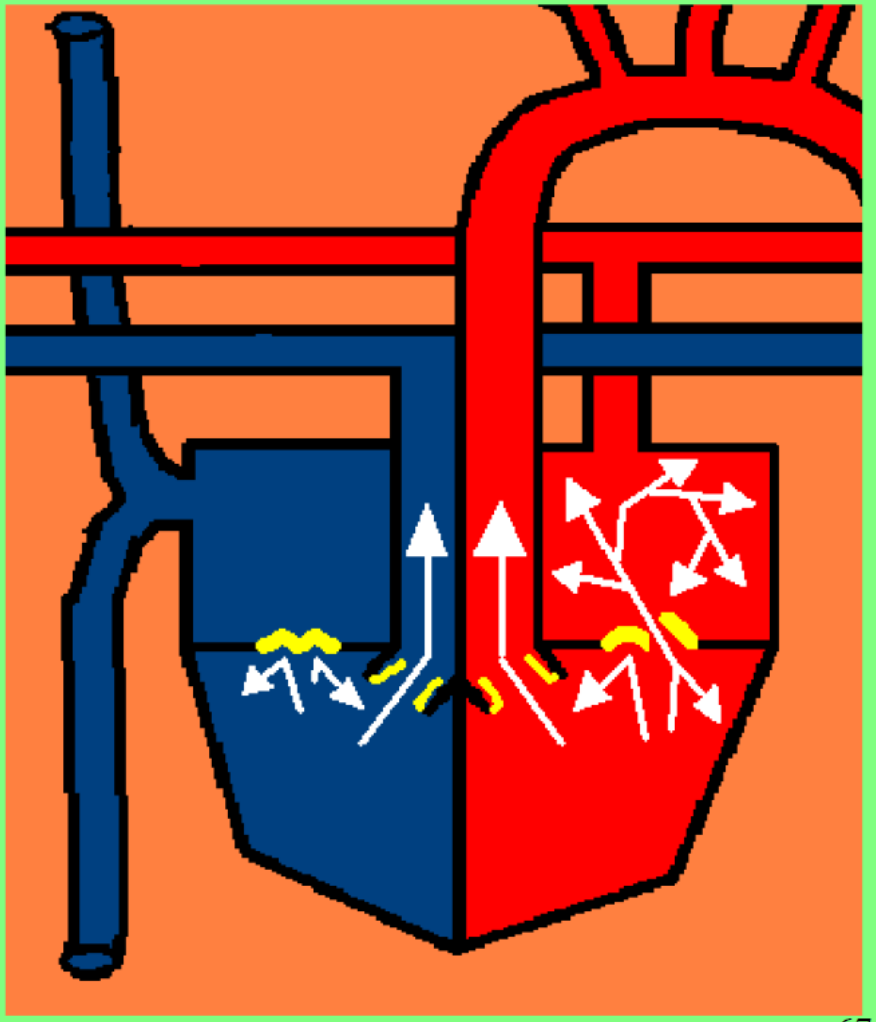
S-1 MURMUR SOUNDS LIKE:



"SWOOSH-DUB . . . . SWOOSH-DUB . . . . SWOOSH-DUB . . . . SWOOSH-DUB . . . "

CAUSE OF SYSTOLIC (S 1) MURMUR

- **DAMAGE TO MITRAL and/or TRICUSPID VALVE(s)**
- **CAUSES REGURGITATION**



- **MOST SYSTOLIC MURMURS CAUSED BY MITRAL VALVE FAILURE.**

- **ACUTE MITRAL VALVE REGURGITATION IS A POTENTIALLY LETHAL COMPLICATION OF ACUTE / RECENT EXTENSIVE TRANSMURAL MI**

ACUTE MITRAL VALVE RUPTURE USUALLY OCCURS 7-10 DAYS POST EXTENSIVE MI (e.g.: INFERIOR POSTERIOR LATERAL MI).

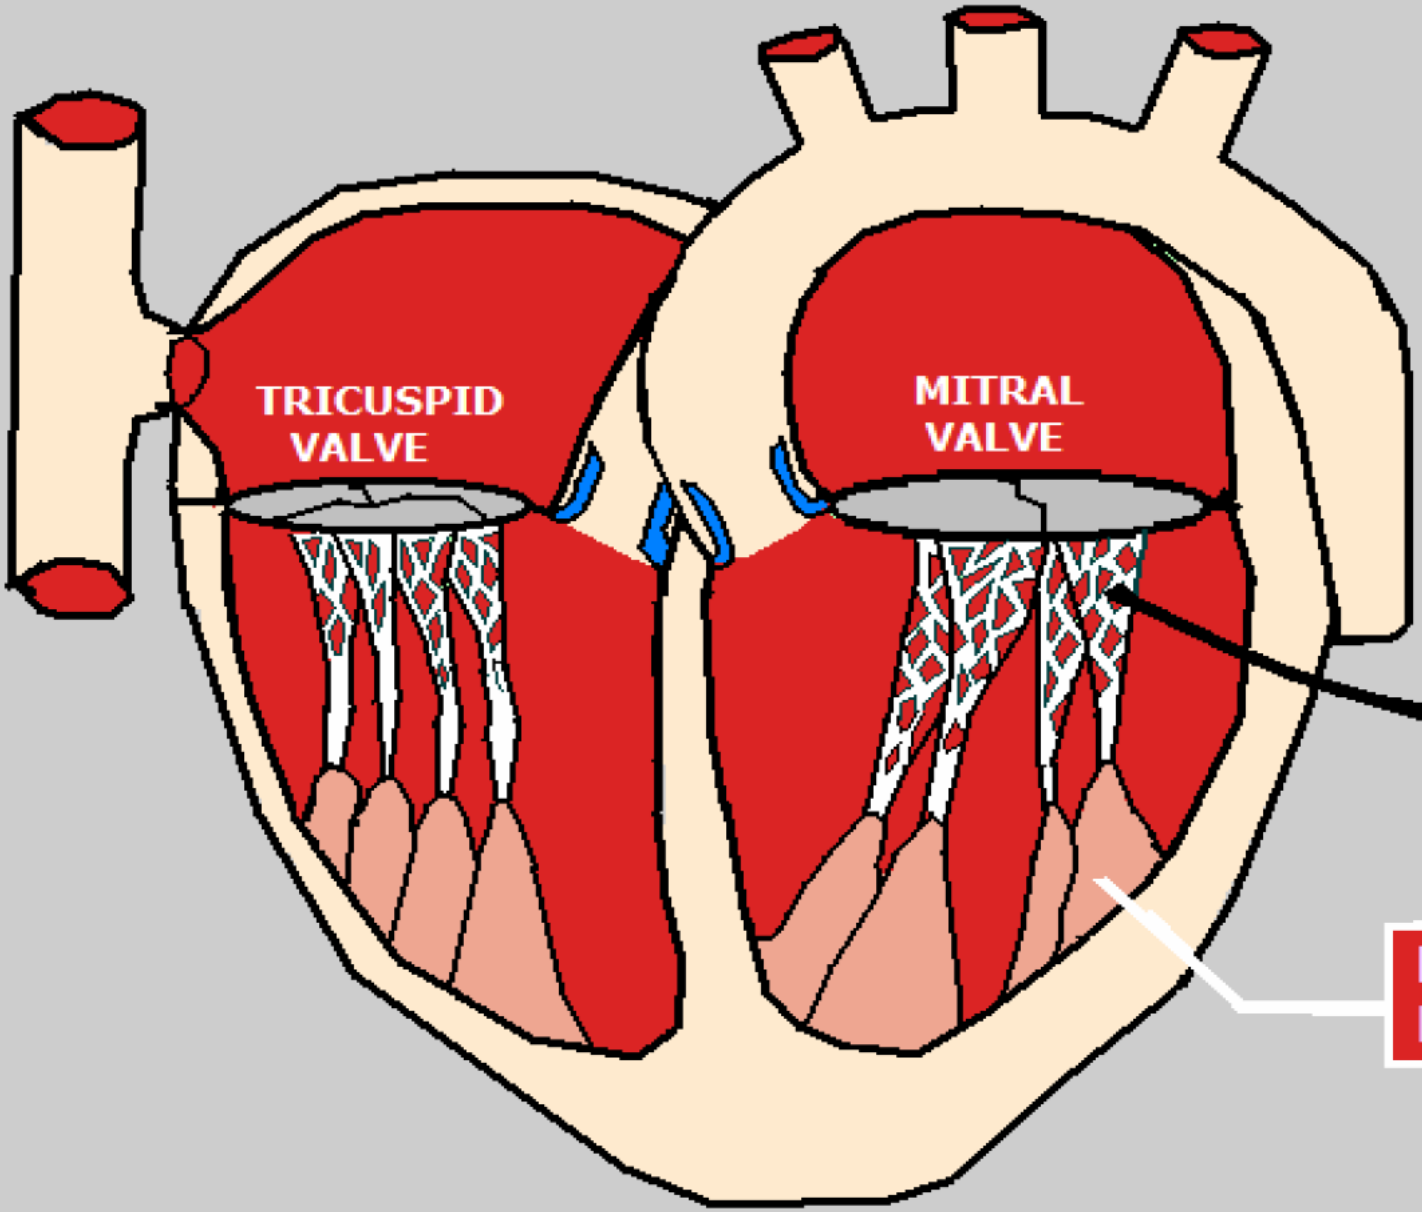
ACUTE Mitral Valve REGURGITATION can be caused by EXTENSIVE "Multi-Site" Myocardial Infarction and Necrosis – which results in PAPILLARY MUSCLE NECROSIS and PAPILLARY MUSCLE TEAR.

Papillary muscles are attached to "multiple surfaces" . . . . .

A Common Cause of ACUTE MITRAL REGURGITATION is:

"Patients who are 7-10 days POST-EXTENSIVE MI," in cases where the "zone of infarction" is large (e.g. "inferior-posterior-lateral") and there was a delay in PCI resulting in large zone of necrosis.

ATRIO-VENTRICULAR VALVES



ARE SECURED TO THE ENDO-CARDIAL SURFACE BY THE

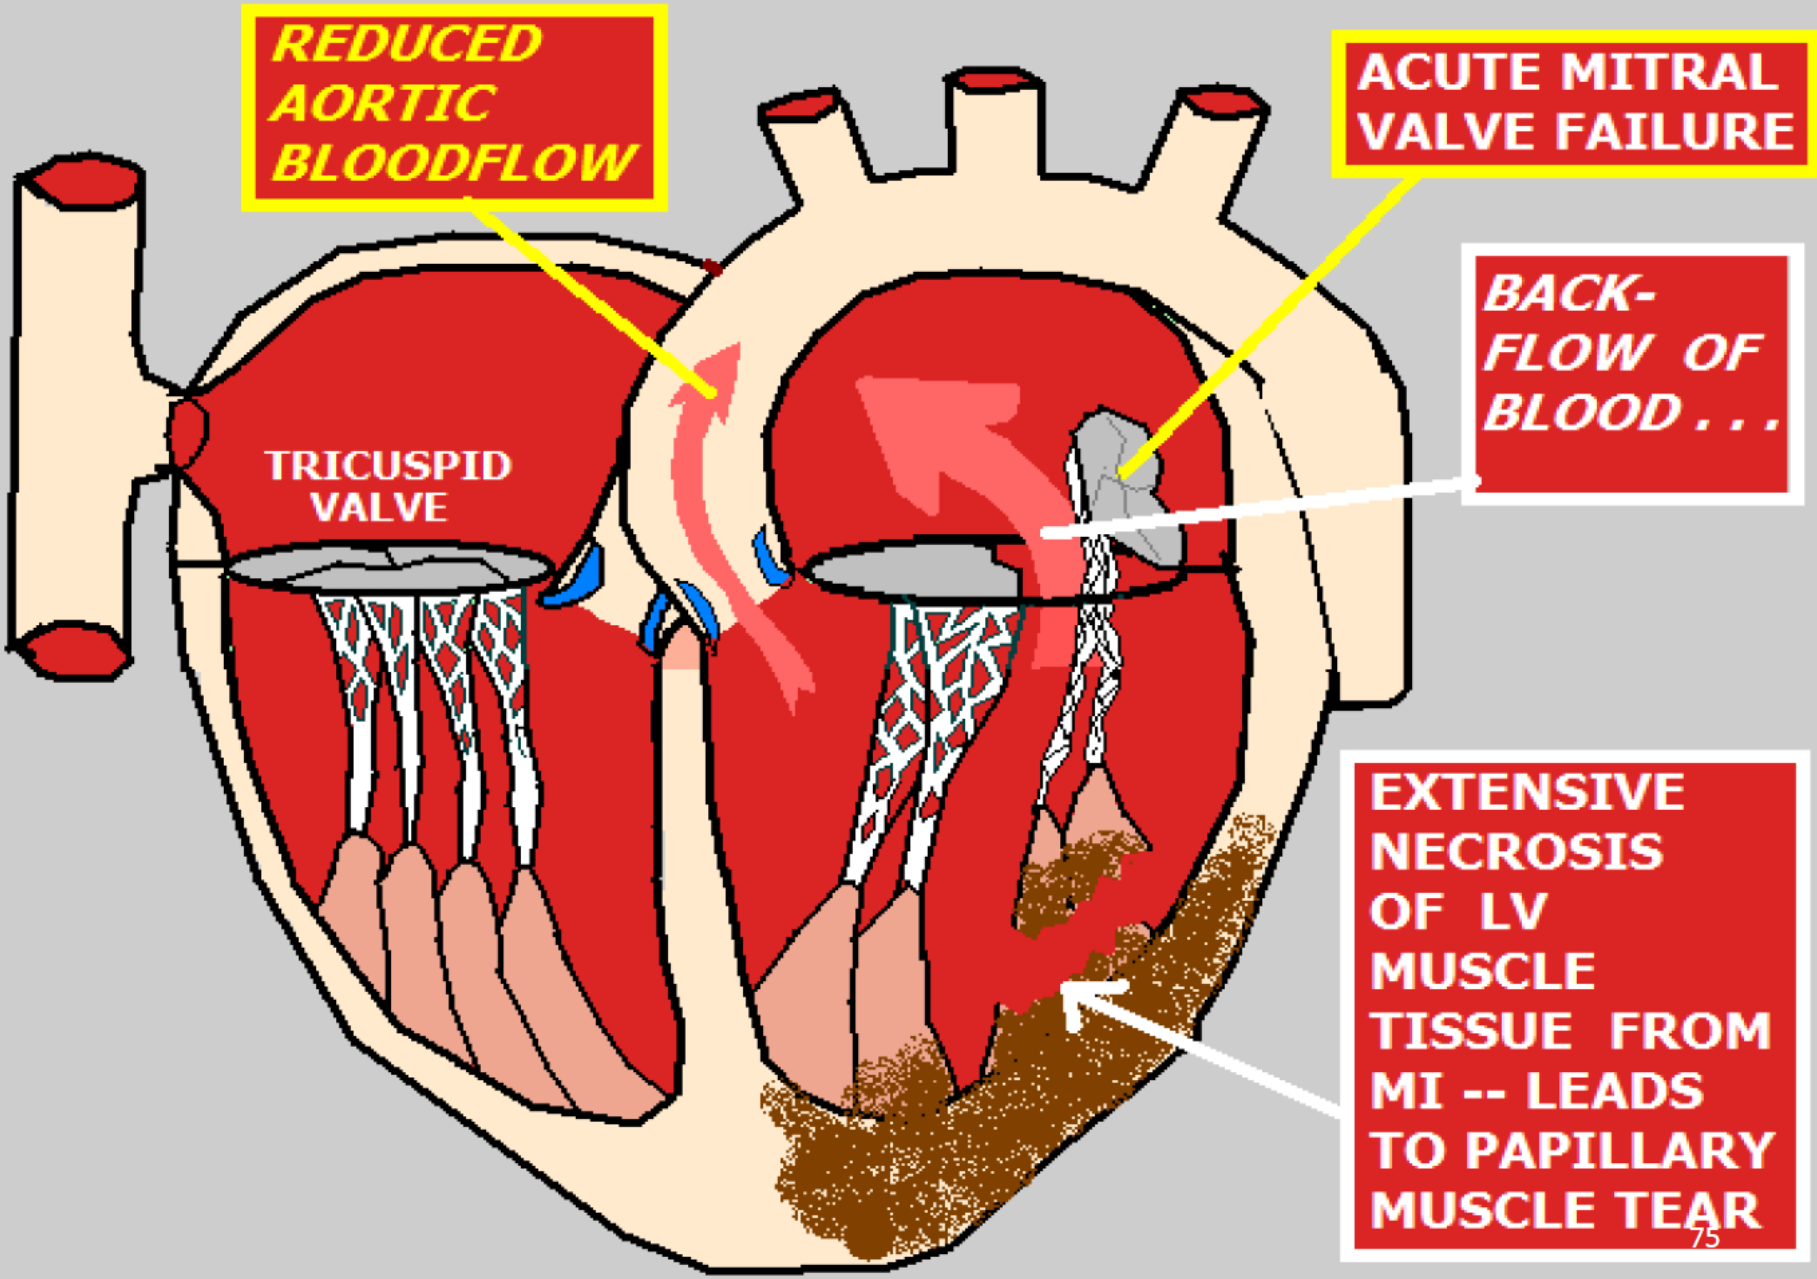
CHORDAE TENDINEAE

AND THE

PAPILLARY MUSCLES

ACUTE MITRAL REGURGITATION

DURING VENTRICULAR SYSTOLE



Symptoms of Acute Mitral Regurgitation

- SHOCK
- PROFOUND HYPOTENSION
- PINK, FROTHY SPUTUM
- PULMONARY EDEMA
- SYSTOLIC (S1) MURMUR

"SWOOSH – DUB……SWOOSH – DUB……SWOOSH – DUB…"

BASIC HEART SOUNDS ASSESSMENT

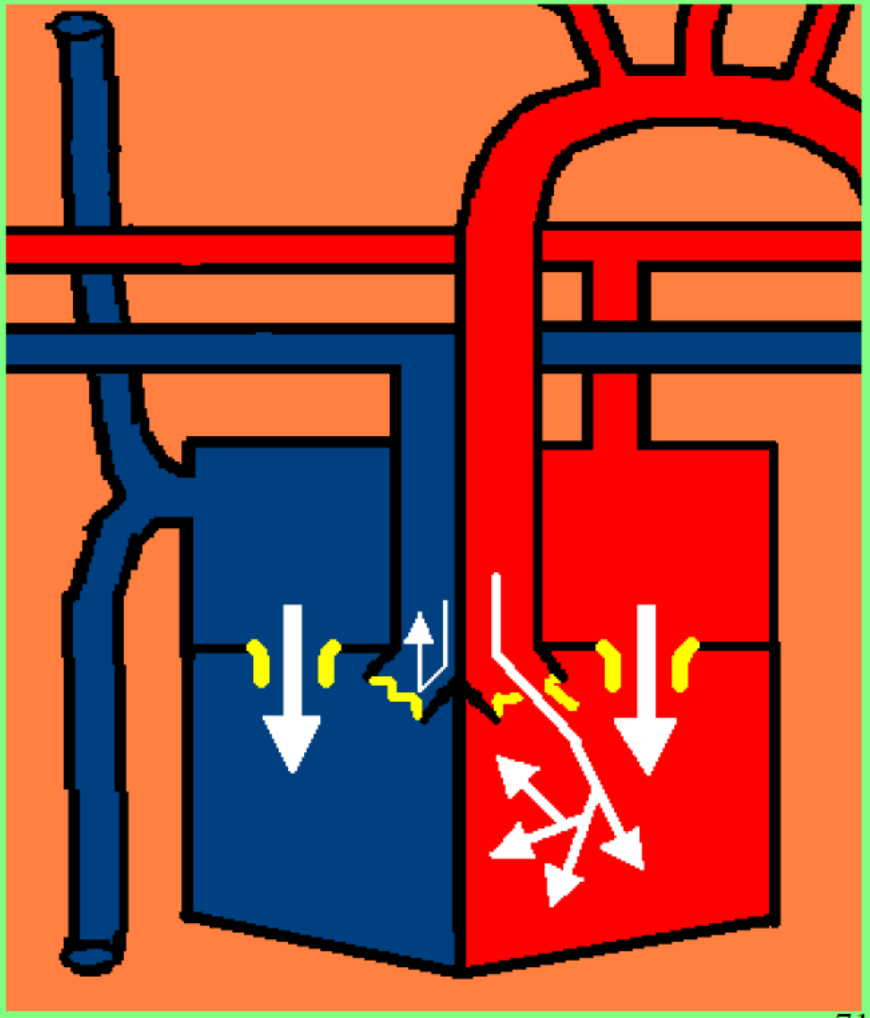
MURMUR = "SWOOSH"
SOUND CAUSED BY THE
SOUND OF TURBULENCE.

S-2 MURMUR SOUNDS LIKE:

"LUB-SWOOSH . . . . LUB-SWOOSH
. . . .LUB-SWOOSH . . . . LUB-
SWOOSH . . . "

CAUSE OF DIASTOLIC (S2) MURMUR

- **DAMAGE TO AORTIC and/or PULMONIC VALVE(s)**
- **CAUSES REGURGITATION**



Chronic **Valvular REGURGITATION** (Leaky Valve) leads to elevated heart chamber pressures and DILITATION.

Chronic **Valvular STENOSIS** (“Creaky” Valve) leads to Cardiac Muscle STRAIN and HYPERTROPHY.

BOTH conditions, if untreated, eventually leads to **HEART FAILURE.**

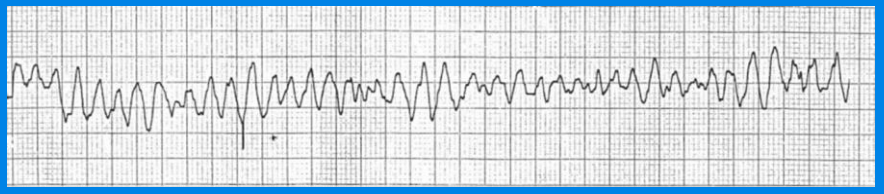
  - Single Lead “rhythm strip”

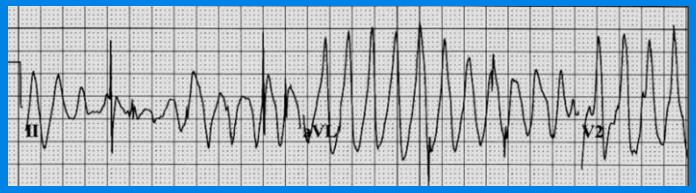
Integrated ECG:

- HEMODYNAMIC STATUS
  - ABCs (Airway open? + Breathing? + Pulse?)

If there is **NO PULSE** . . . .

- **Start CPR**
- **Apply ECG** – determine rhythm- shockable?
  - **SHOCKABLE:** V-fib / V-tach / Torsades





Defib 120-200 BiPhasic
- IV Access
- Advanced Airway

Defib 120-200 or HIGHER
- Epinephrine 1mg IV

Defib 120-200 or HIGHER
- Amiodarone 300mg - OR – Lidocaine 1.0 -1.5 mg/kg

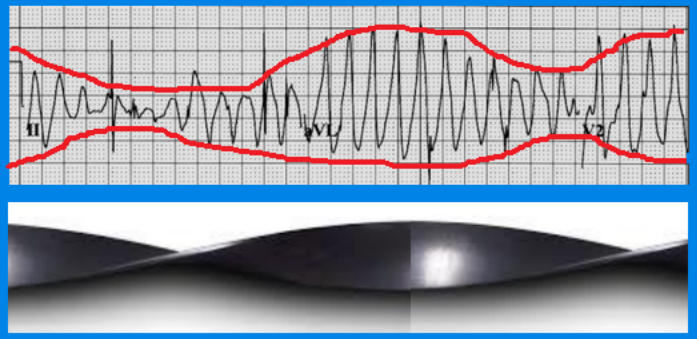
Defib 120-200 or HIGHER
- Epinephrine 1mg IV

Defib 120-200 or HIGHER
- CONTINUE as per ACLS….

If there is **NO PULSE** . . . .

- **Start CPR**
- **Apply ECG** – determine rhythm- shockable?
  - **SHOCKABLE:** V-fib / V-tach / Torsades

Torsades de Pointes . . . the QRS pattern resembles a "TWISTED RIBBON" . . . .



CONSIDER using Lidocaine in place of Amiodarone due to the increased possibility of QT PROLONGATION . . .

Defib 120-200 BiPhasic
- IV Access
- Advanced Airway

Defib 120-200 or HIGHER
- Epinephrine 1mg IV

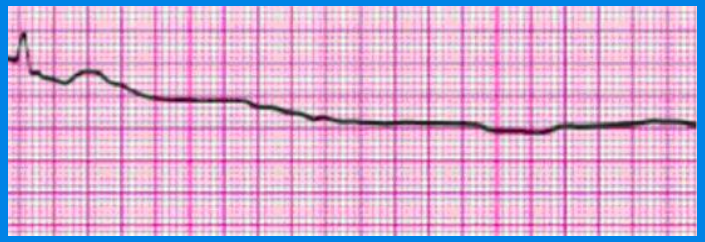
Defib 120-200 or HIGHER
- ~~Amiodarone 300mg~~ – OR –
  Lidocaine 1.0-1.5 mg/kg

Defib 120-200 or HIGHER
- Epinephrine 1mg IV

Defib 120-200 or HIGHER
- CONTINUE as per ACLS….

If there is **NO PULSE** . . . .

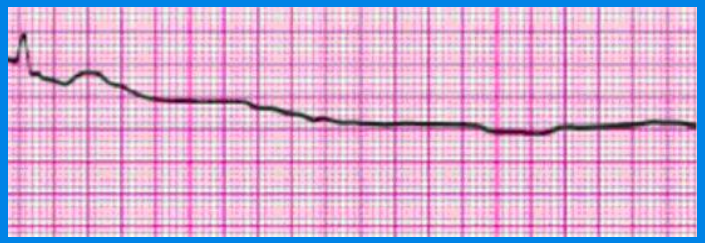
- **Start CPR**
- **Apply ECG** – determine rhythm- shockable?
  - **NOT SHOCKABLE:** Agonal Rhythm / Asystole / PEA



- Continue CPR
- IV/IO Access
- Advanced Airway
- Epinephrine 1mg IV
- Rule out reversible causes
- CONTINUE as per ACLS….

If there is **NO PULSE** . . . .

- **Start CPR**
- **Apply ECG** – determine rhythm- shockable?
  - **NOT SHOCKABLE:** Agonal Rhythm / Asystole / PEA



- Continue CPR
- IV/IO Access
- Advanced Airway
- Epinephrine 1mg IV
- Rule out reversible causes
- CONTINUE as per ACLS….

if the patient
HAS A PULSE with
AGONAL COMPLEXES . . . .
IMMEDIATELY BEGIN TRANSCUTANEOUS PACING -
you will probably save the patient's life !

Integrated ECG:

- HEMODYNAMIC STATUS
  - ABCs
  - Shock Assessment

SHOCK ASSESSMENT

SHOCK =

INADEQUTE TISSUE PERFUSION

- STARTS THE INSTANT YOU SEE PATIENT
- ENDS WHEN YOU REACH THE PATIENT'S SIDE

SHOCK ASSESSMENT

LOC:	ANXIOUS RESTLESS LETHARGIC UNCONSCIOUS	AWAKE ALERT & ORIENTED
SKIN:	PALE / ASHEN CYANOTIC COOL DIAPHORETIC	NORMAL HUE WARM DRY
BREATHING:	TACHYPNEA	NORMAL
PULSE:	WEAK / THREADY TOO FAST or SLOW	STRONG
STATUS:	SHOCK	NORMAL

SHOCK is the CORRIDOR to DEATH

SHOCK – FIND CAUSE . . .

- HYPOVOLEMIC (internal or external bleeding)
- OBSTRUCTIVE (PE / tamponade)
- PSYCHOGENIC (sudden fear – self-correcting)
- NEUROLOGICAL (spinal injury)
- INSULIN (hypoglycemia)
- SEPTIC (systemic infection)
- CARDIOGENIC (abnormal heart rate or contractility)

SHOCK – FIND CAUSE . . .

CHIEF COMPLAINT

KEY WORDS:

"CHEST: PAIN / HEAVINESS / PRESSURE/ FUNNY FEELING IN," etc.

SHORTNESS BREATH

DIZZINESS / LIGHTHEADEDNESS

ETC. ETC. ETC.

INFARCTION

SYMTOMS OF MYOCARDIAL INFARCTION:

1. CHEST PAIN:
   - Substernal - can radiate to neck, shoulders, jaw, L or R arm
   - Pain described as "Dull Pain" or "Pressure" or "Heaviness" - but can be sharp
   - Usually NOT effected by DEEP INSPIRATION, POSITION, or MOVEMENT

INFARCTION

SYMTOMS OF MYOCARDIAL INFARCTION:

1. CHEST PAIN
2. SHORTNESS OF BREATH
   May or may not be present.

INFARCTION

SYMTOMS OF MYOCARDIAL INFARCTION:

1. CHEST PAIN
2. SHORTNESS OF BREATH
3. NAUSEA
   May or may not be present

INFARCTION

SYMTOMS OF MYOCARDIAL INFARCTION:

1. CHEST PAIN
2. SHORTNESS OF BREATH
3. NAUSEA
4. COLD, CLAMMY, PALE SKIN
   and other signs of hypoperfusion
   may be present

INFARCTION

    (within 10 minutes) !!

ATYPICAL SYMPTOMS of ACS

? ? ?

Acute MI patients who present without chest pain* are SHREWD:

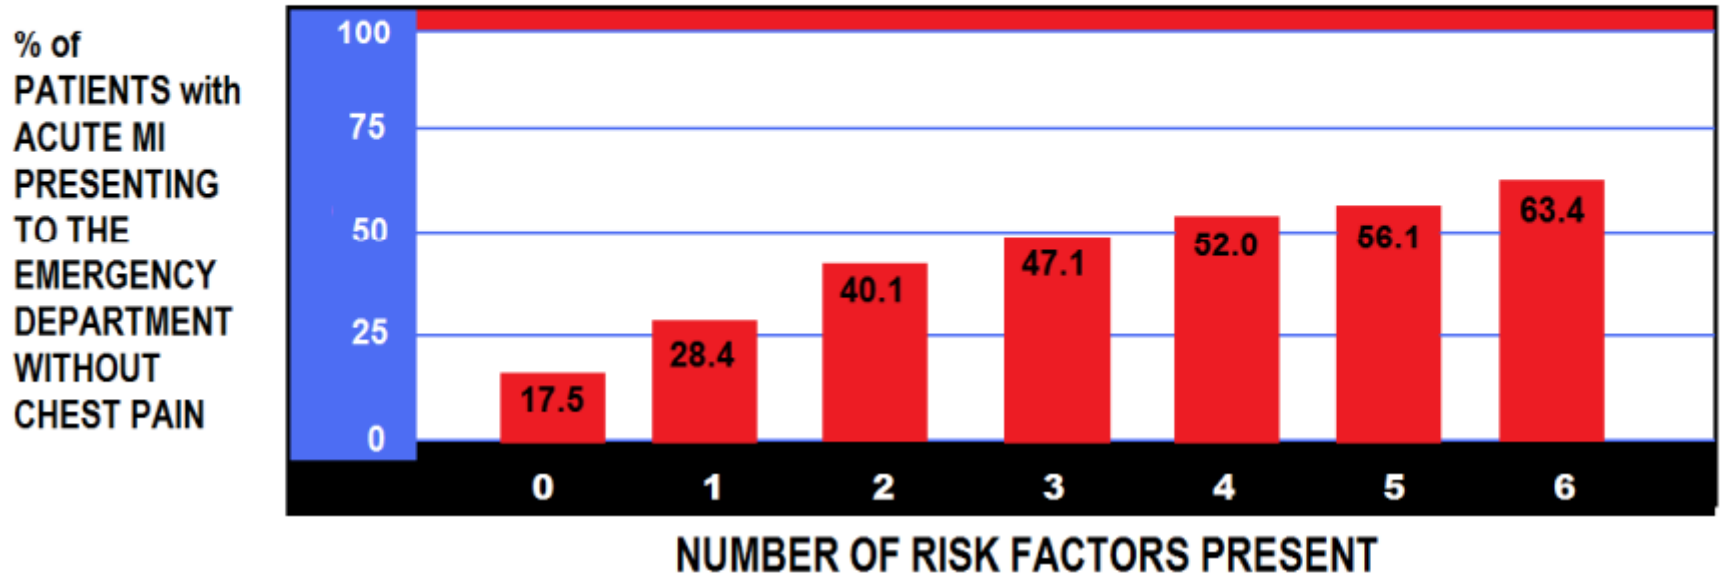
Stroke (previous history of)
Heart failure (previous history of)
Race (non-white)
Elderly (age 75+)
Women
Diabetes mellitus

* The information listed in the table to the immediate left resulted from a study conducted by John G. Canto, MD, MSPH, et. al., of the University of Alabama. The study consisted of 434,877 patients diagnosed with AMI between 1994 and 1998 in 1,674 US hospitals. Study results were published in the Journal of the American Medical Association (JAMA) on June 28, 2000, Vol. 283, No. 24, pages 3223-3229

Common atypical complaints associated with AMI without chest pain include:

Malaise (weakness)
Indigestion
Nausea
Dizziness
Syncope
Fatigue
Abdominal pain
Cold sweats
Elevated heart rate
Dsypnea

Effect of Having Multiple Risk Factors for AMI Without Chest Pain



RISK FACTORS INCLUDE: **S**troke (previous), **H**eart failure (previous), **R**ace (non-white), **E**lderly (age 75+), **W**omen, **D**iabtetes

DATA SOURCE: J. CANTO, MD, MSPH, et al, JAMA 2000 ; 283 : 3223 - 3229

Integrated ECG:

- HEMODYNAMIC STATUS
  - ABCs
  - Shock
- SYMPTOMS
  - Chest Pain / Pressure
  - Other ACS Symptoms
- ECG
  - 12 Lead
  - Single Lead “rhythm strip”

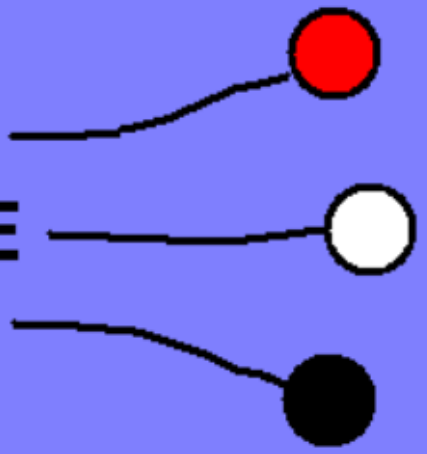
- The 12 Lead ECG has been ordered
- Meanwhile we'll hook the patient to the ECG monitor . . . . .

THE EKG MACHINE

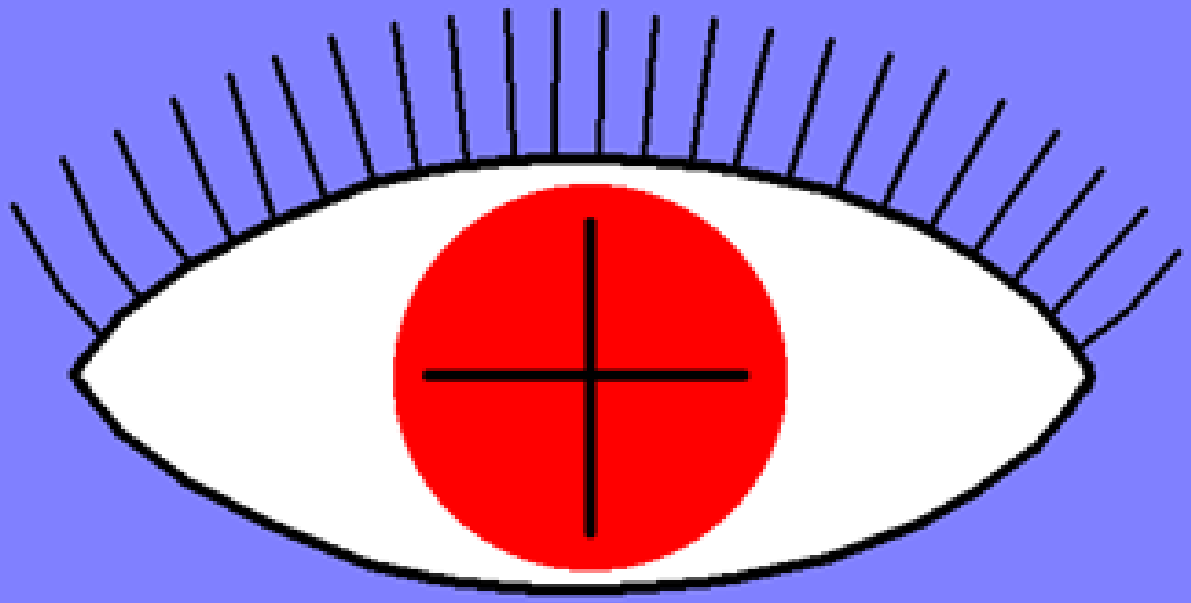
STANDARD 12 LEADS - USES 10 WIRES
(6 CHEST and 4 LIMB)

- I, II, III, and V1, V2, V3, V4, V5, V6
EACH CONSIST OF:

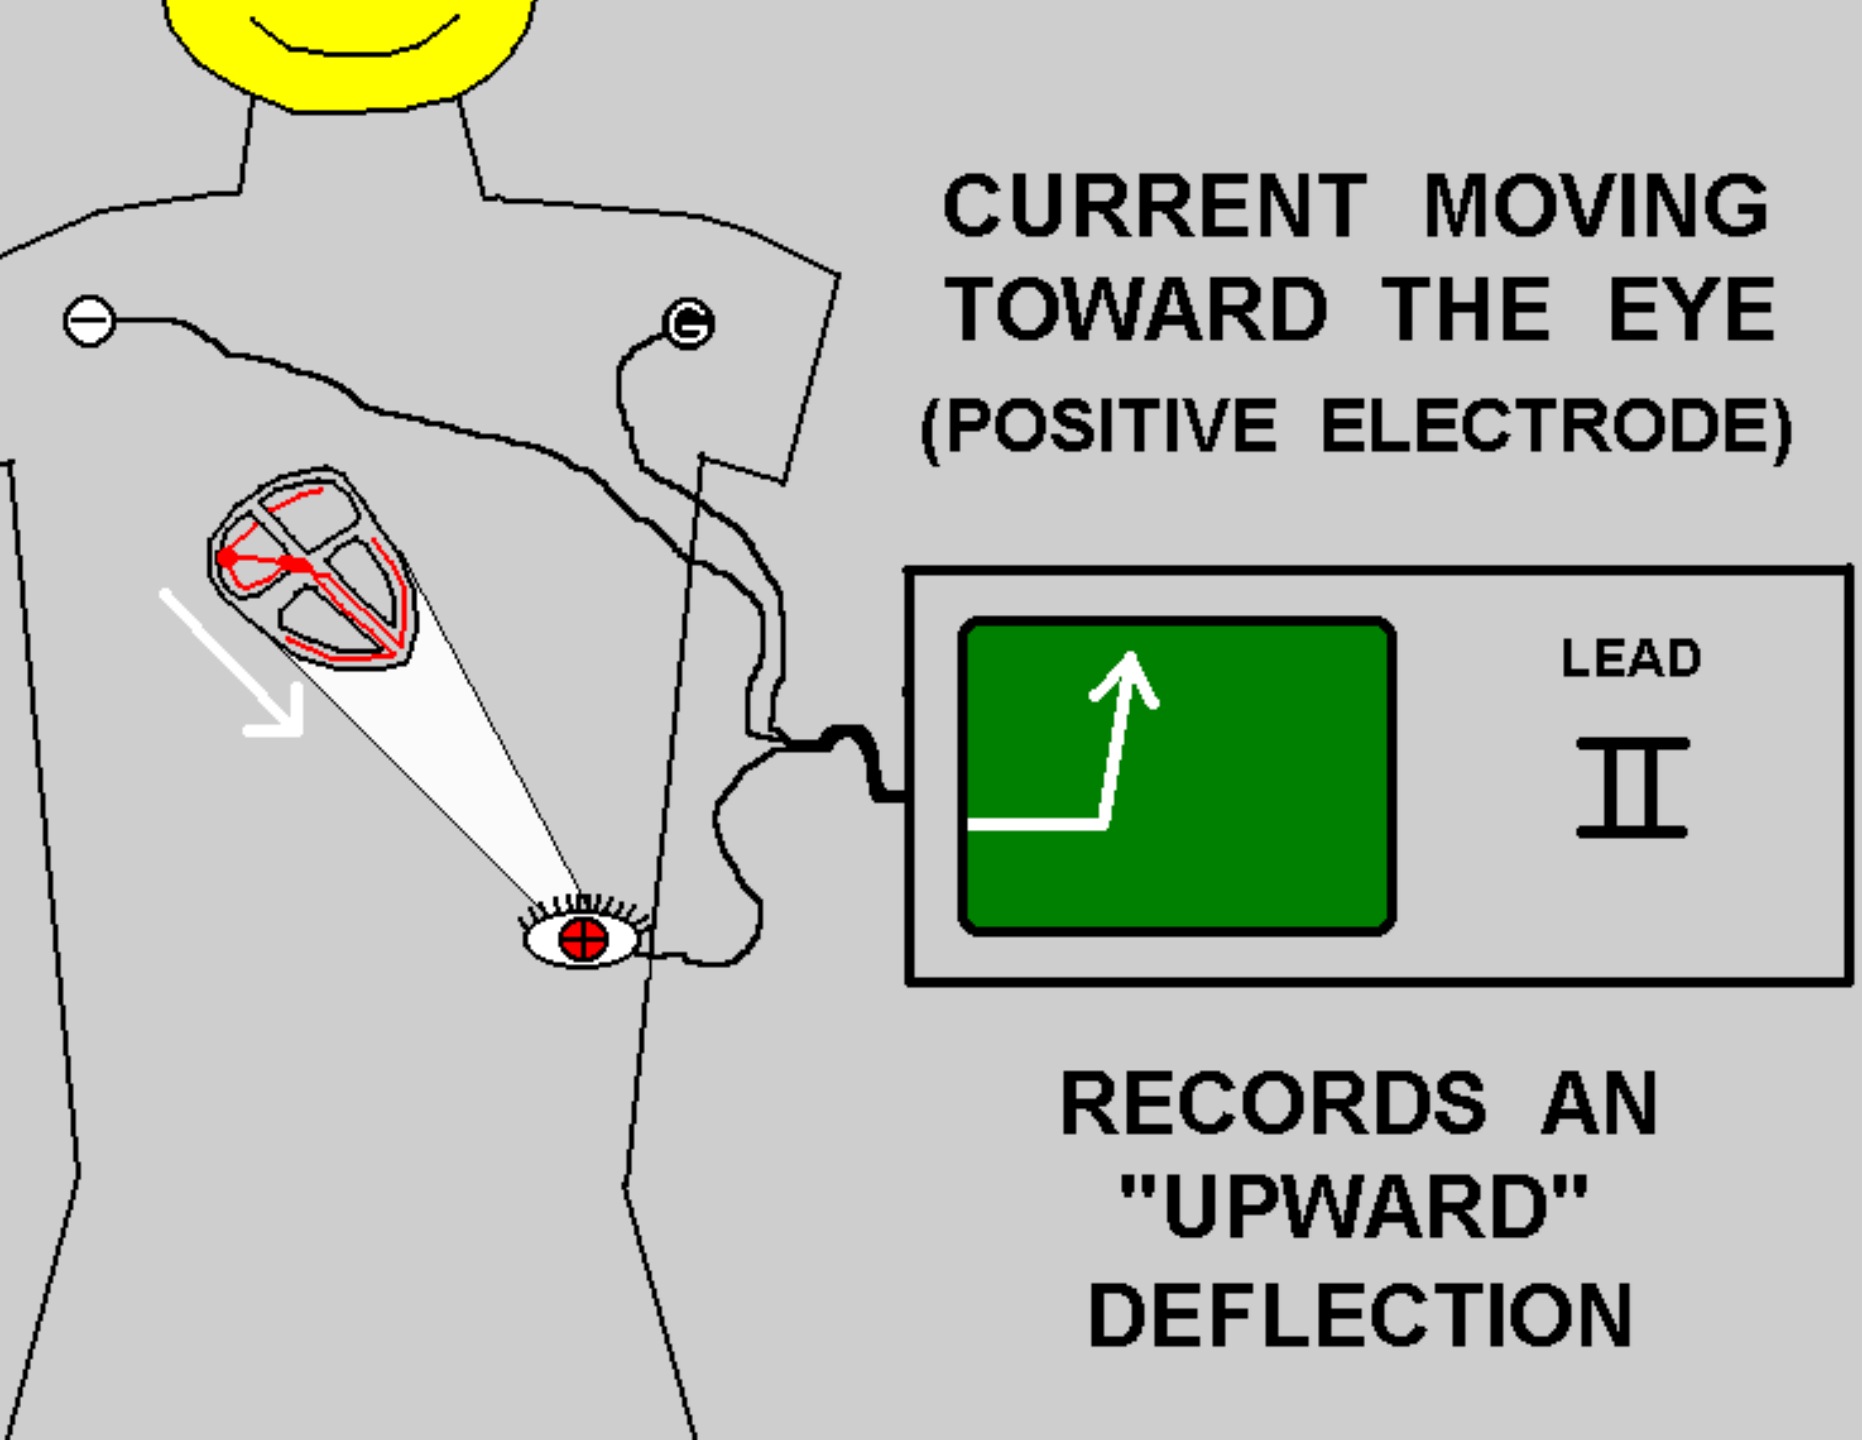
1 POSITIVE ELECTRODE
1 NEGATIVE ELECTRODE
1 GROUND ELECTRODE



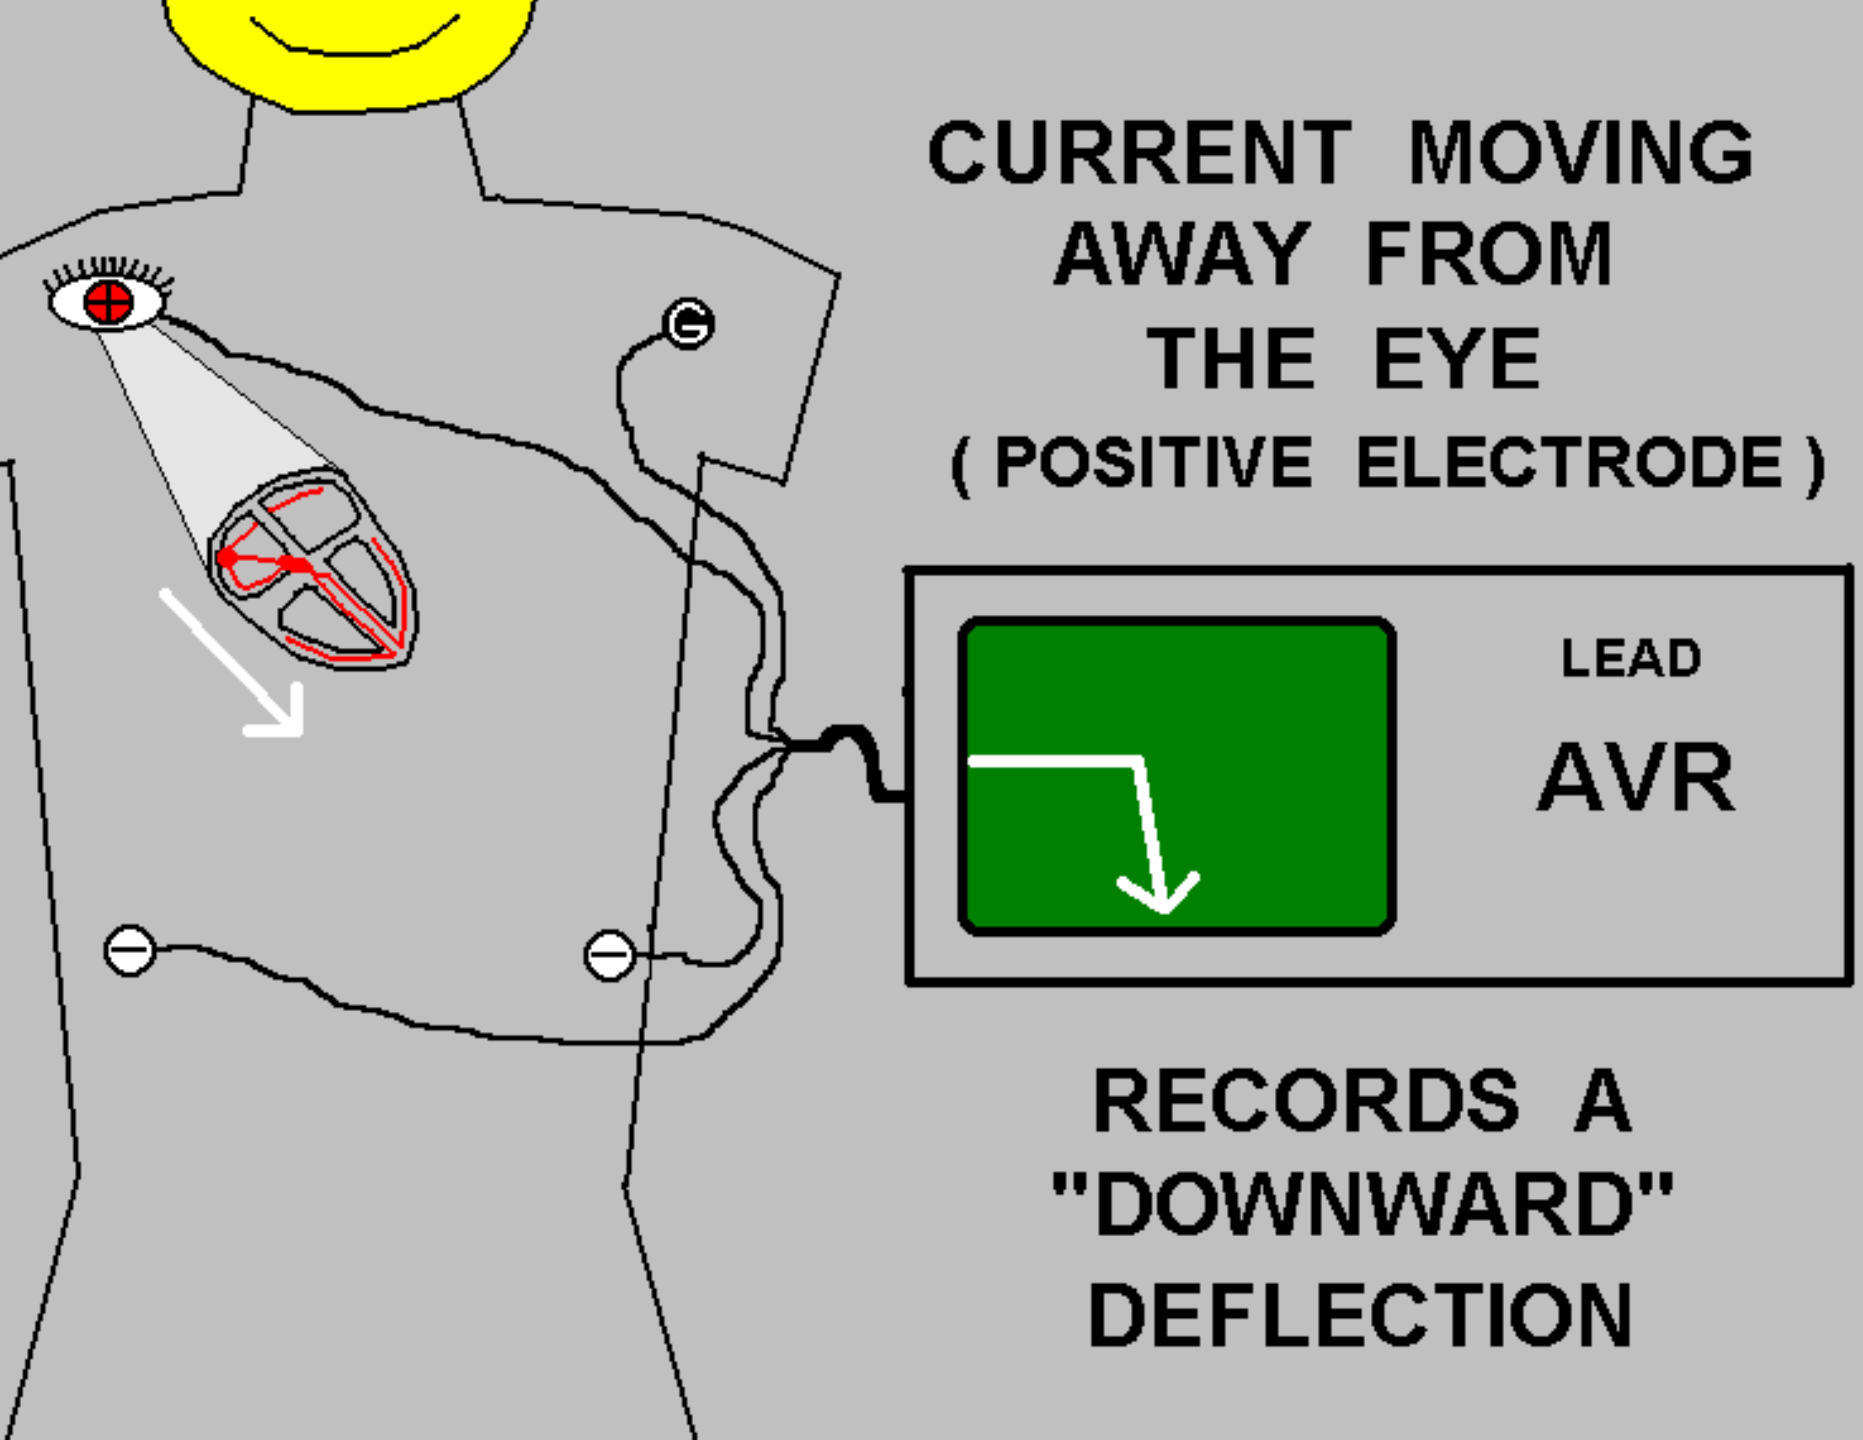
THE POSITIVE ELECTRODE



IS THE "EYE" . . .

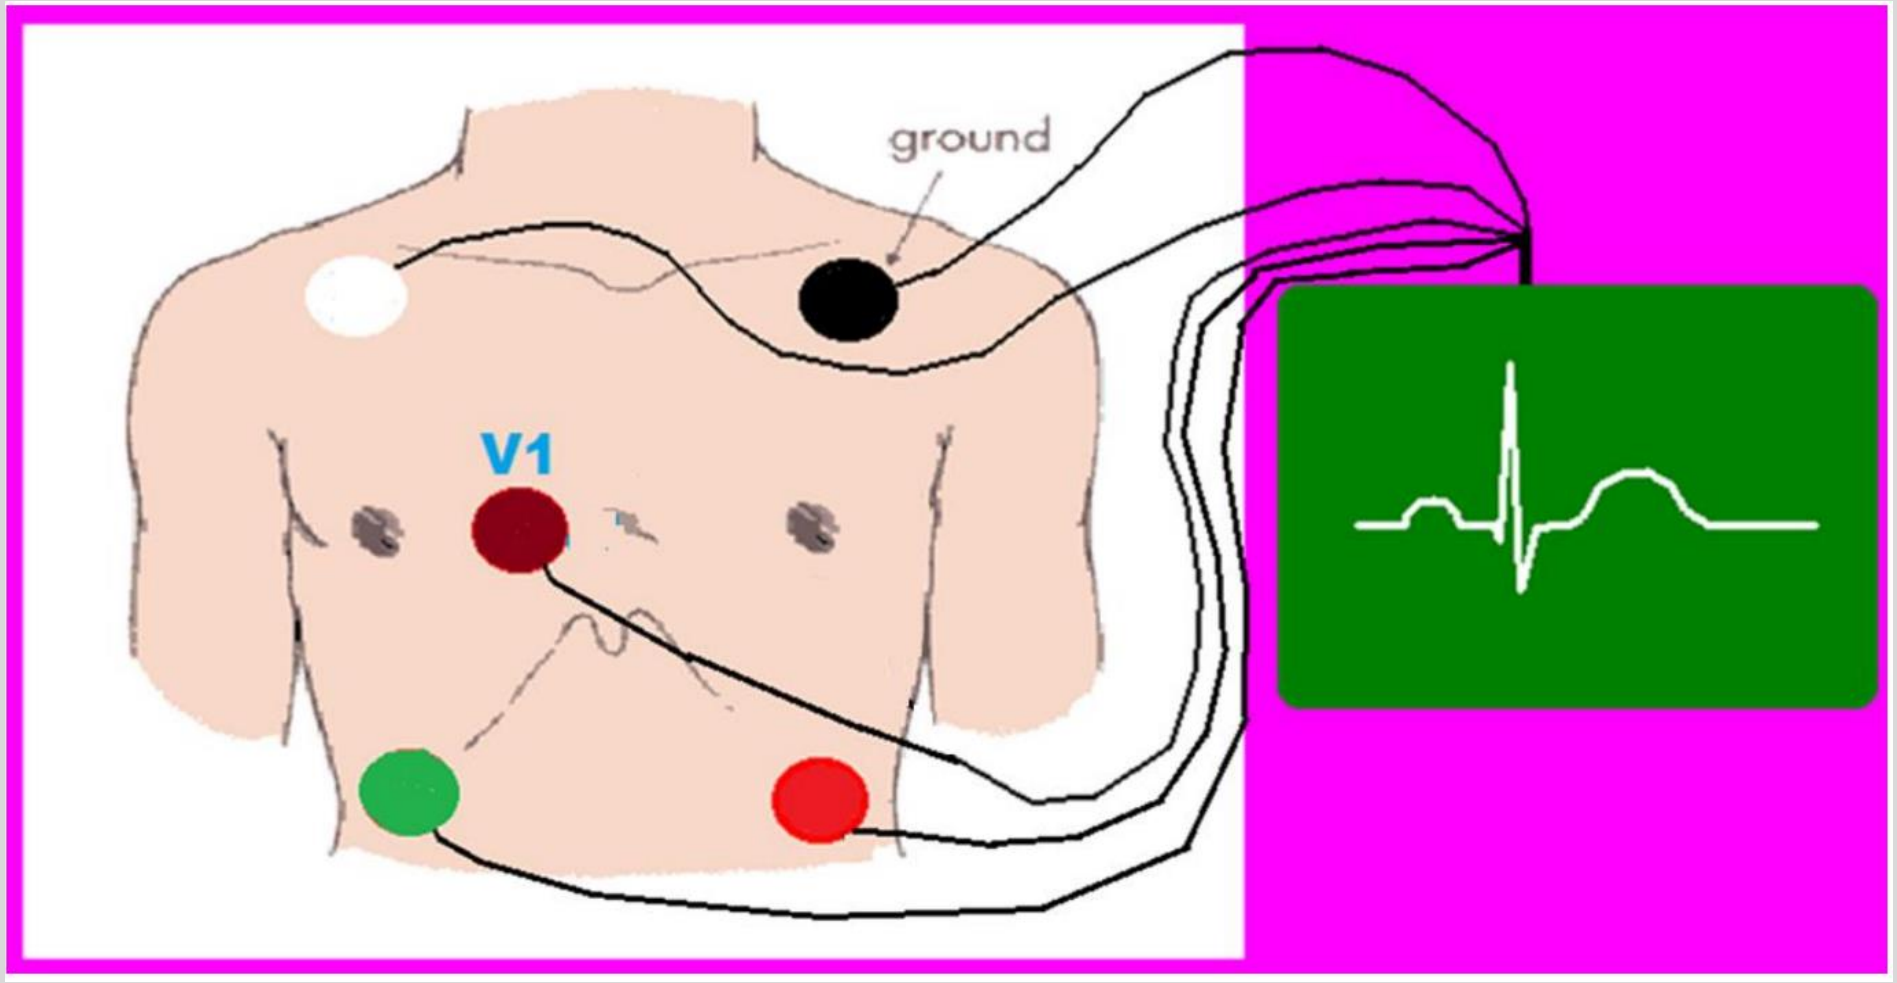


CURRENT MOVING
TOWARD THE EYE
(POSITIVE ELECTRODE)
LEAD
II
RECORDS AN
"UPWARD"
DEFLECTION

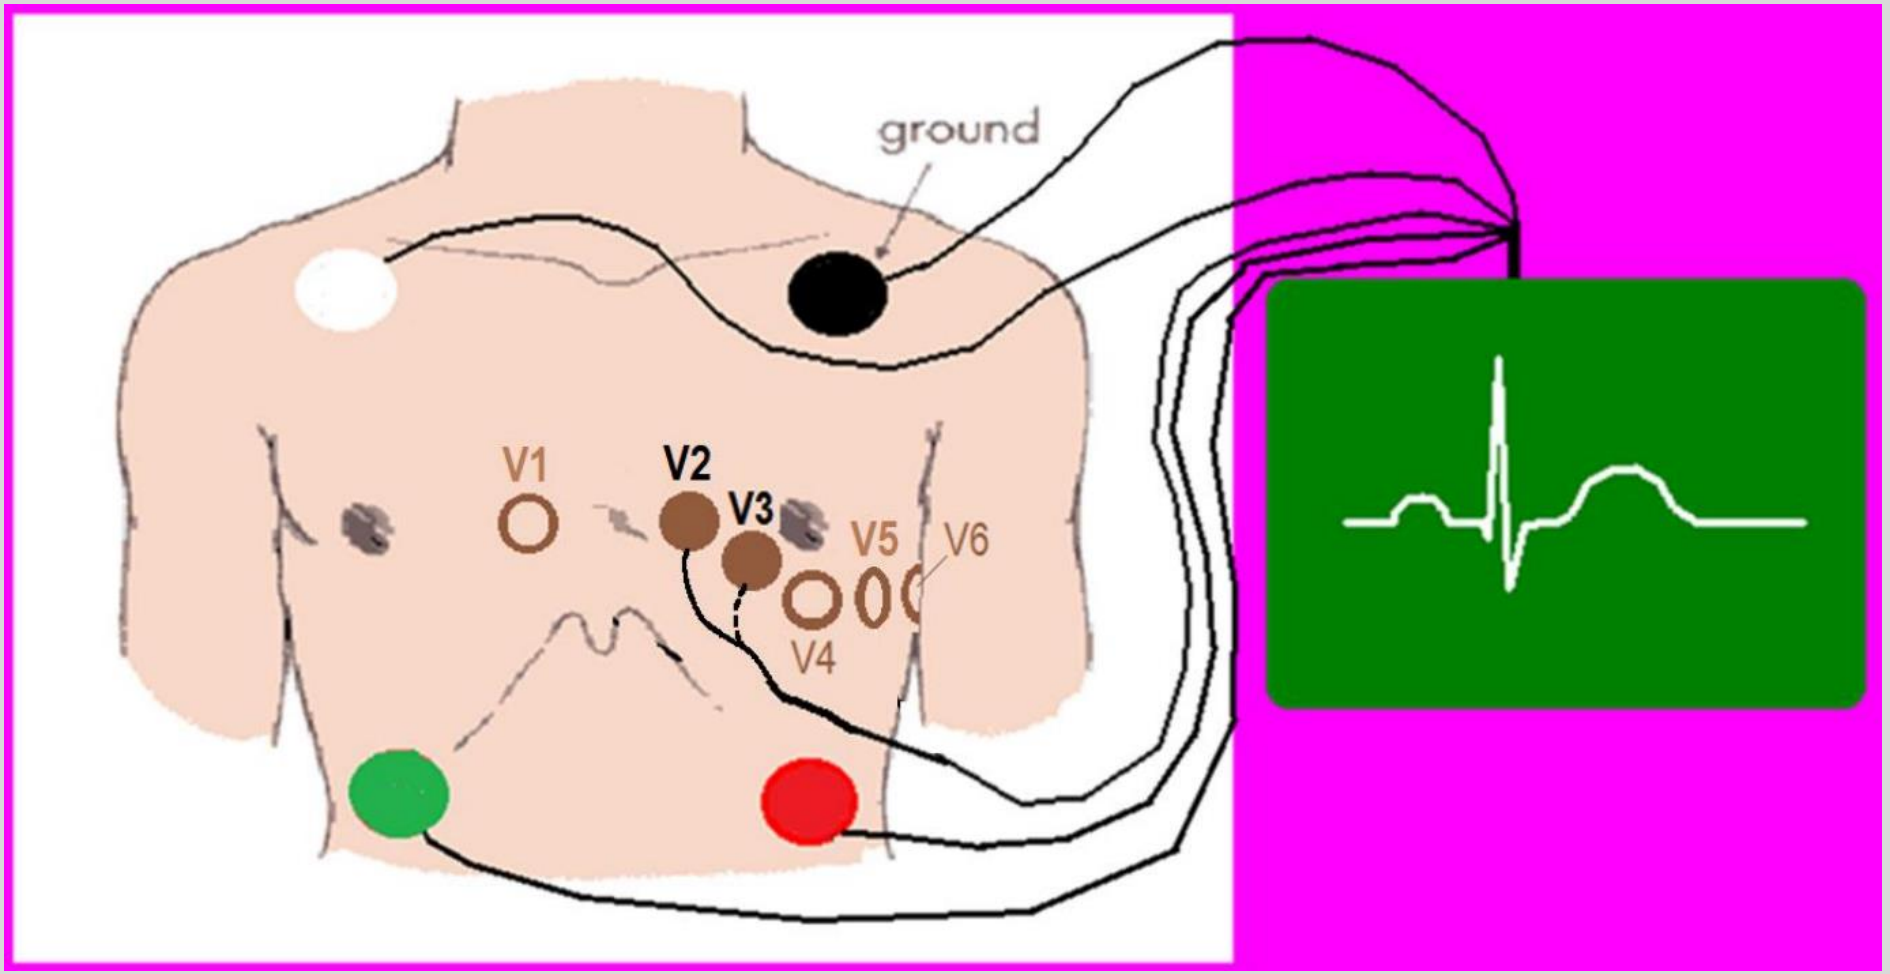


CURRENT MOVING AWAY FROM THE EYE
(POSITIVE ELECTRODE)
LEAD
AVR
RECORDS A "DOWNWARD" DEFLECTION

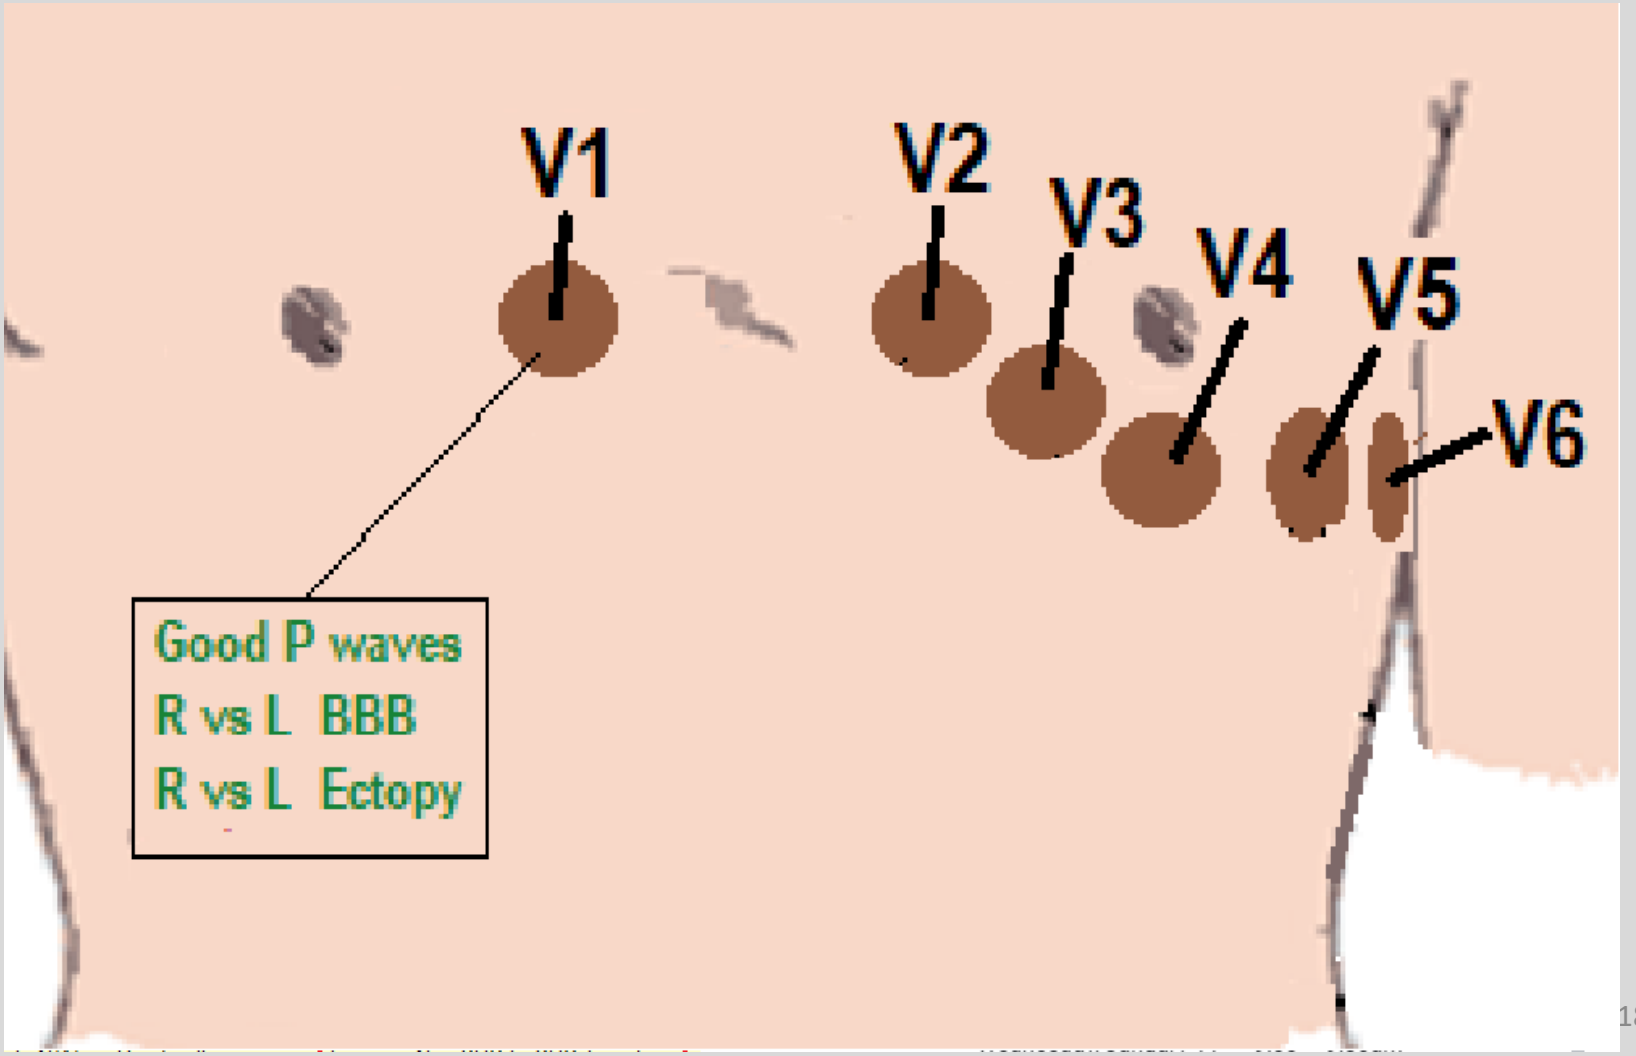
Traditional ECG Monitoring Lead Placement:



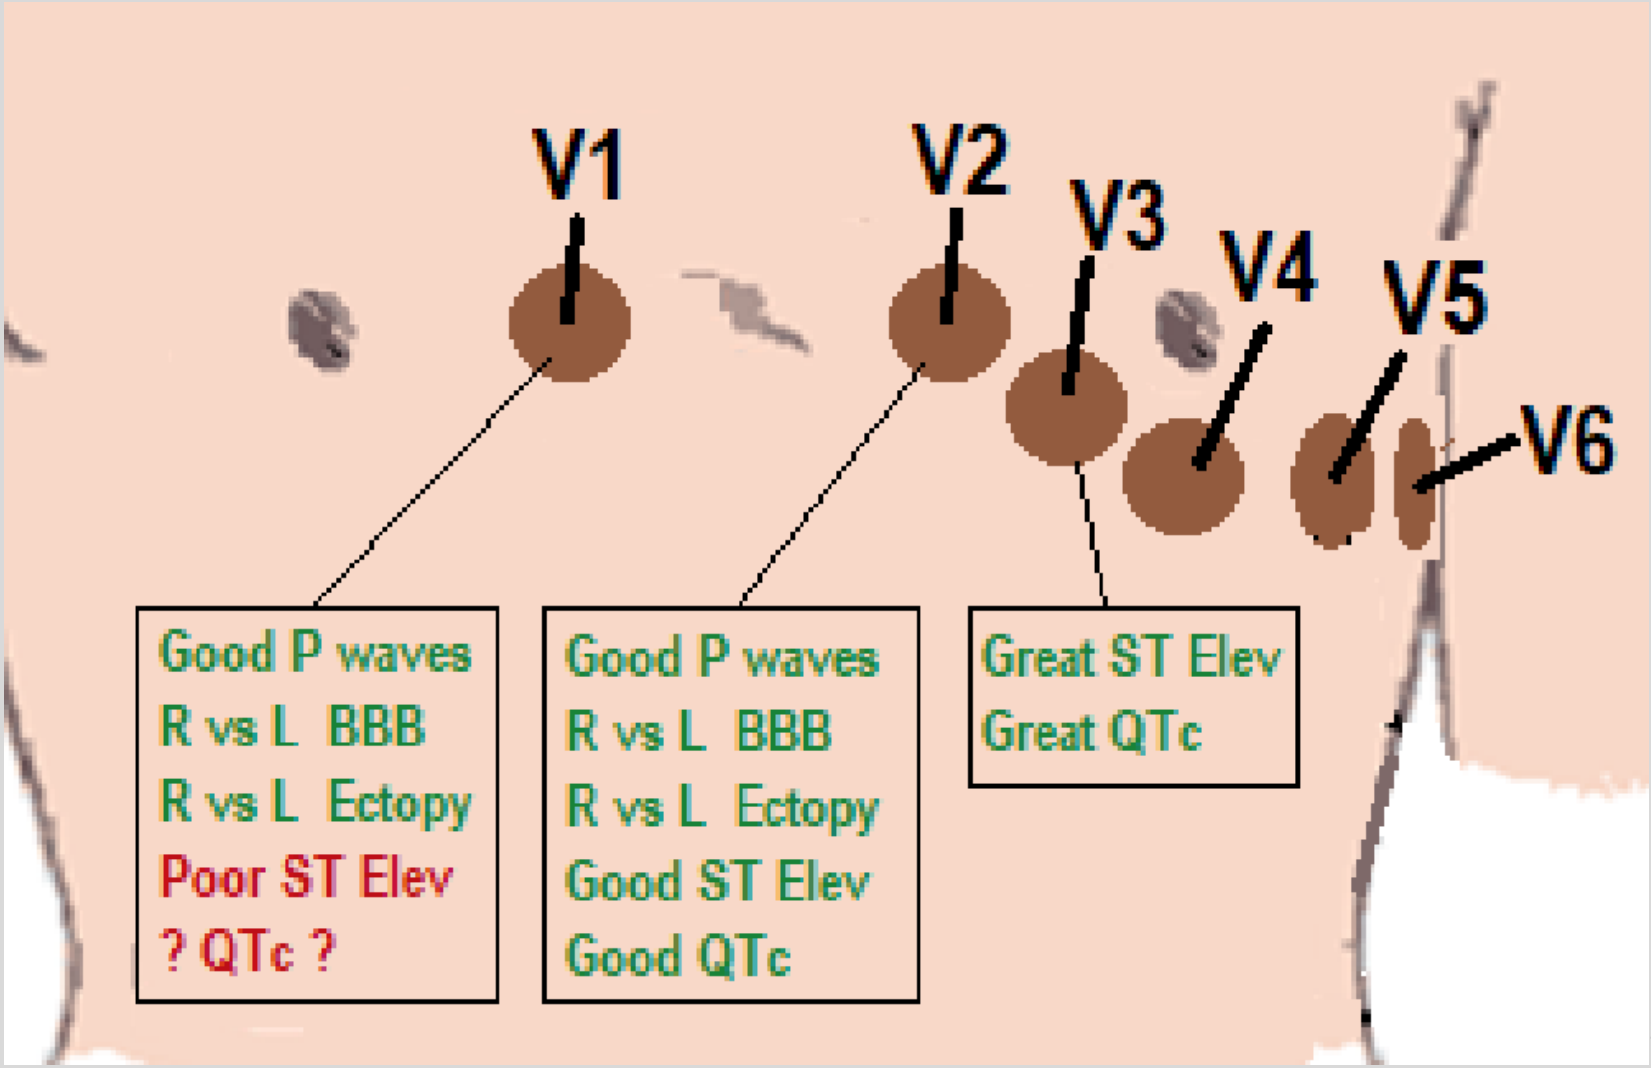
New (2014) Guideline Suggested ECG Monitoring Lead Placement



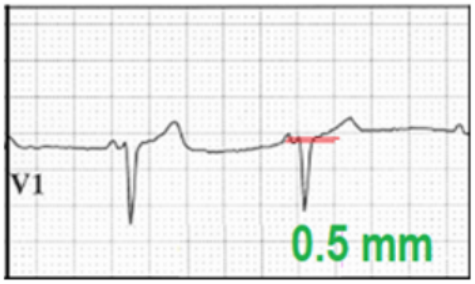
Traditional Continuous ECG Monitoring Lead: V1



New (2014) Guideline Suggested ECG Monitoring Leads: V2 or V3



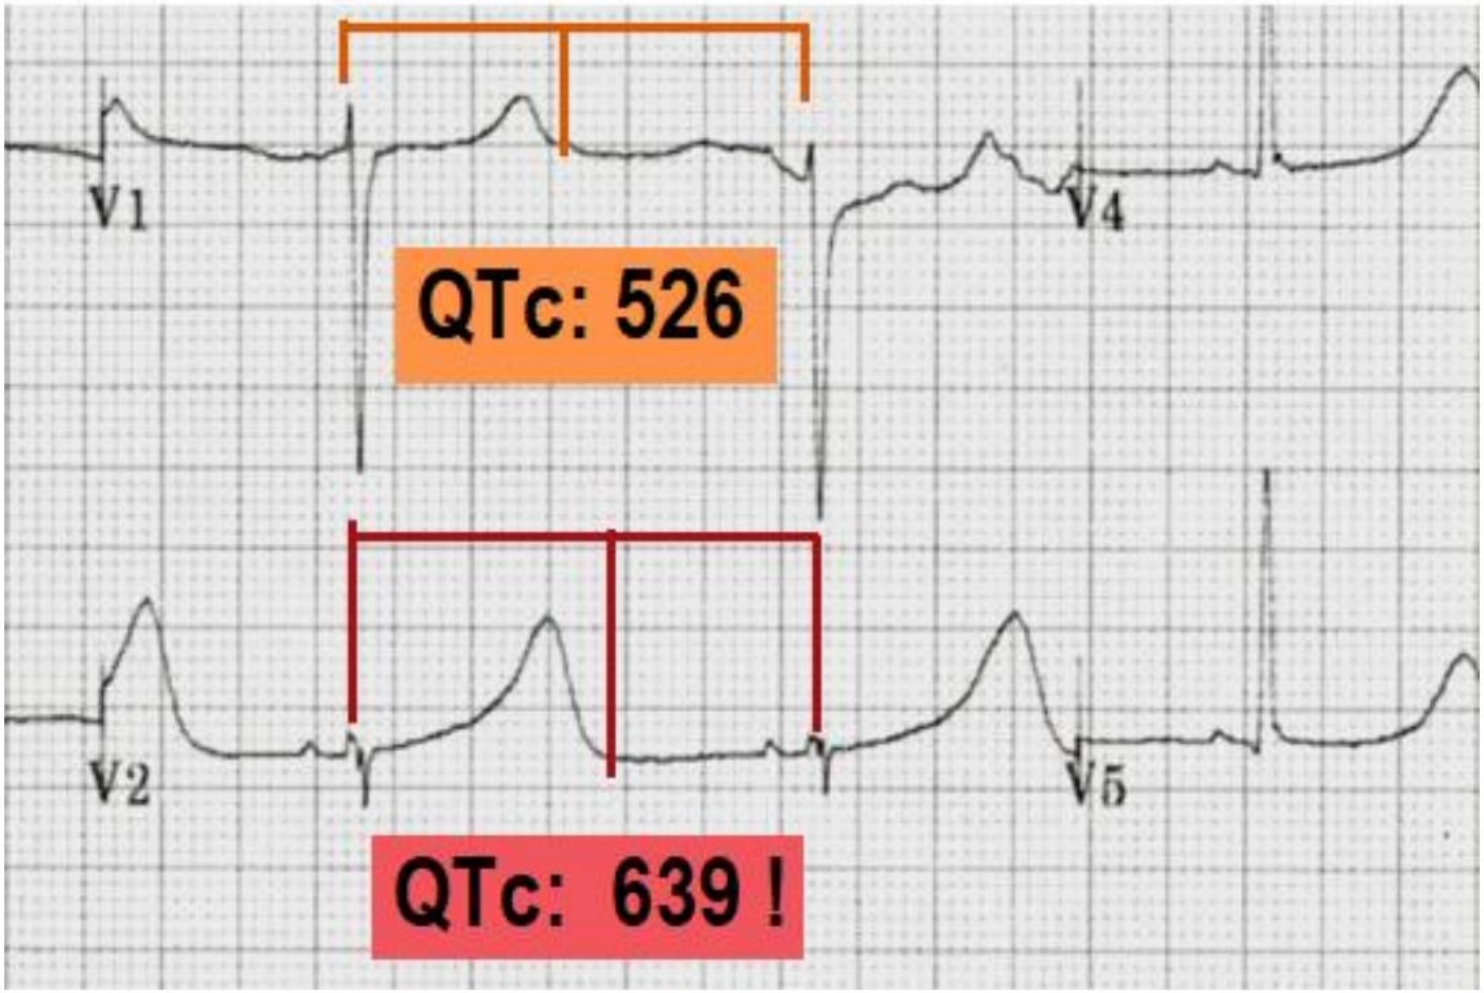
Why not V1 ?



Why not V1 ? *(often won't see STEMI !)*

If you were only monitoring Leads II and V1, you ***would NOT detect this patient's STEMI ! !***

Why not V1 ? (may not detect critical QTc)



- We’ve established continuous ECG monitoring and we assess the rhythm . . . .

CARDIOGENIC SHOCK

- **Heart Rate:**
  - **Should be between 50 – 150**

CARDIOGENIC SHOCK

- **Heart Rate:**
  - **Should be between 50 – 150**

DECREASED CARDIAC OUTPUT may be present when heart rate is:

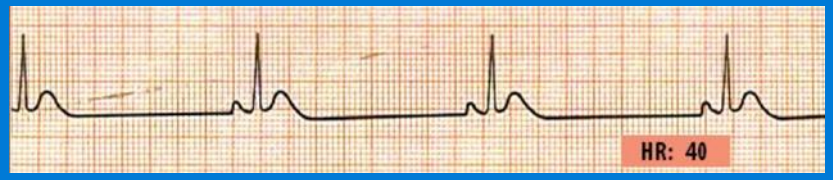
- **LESS THAN 50**
- **GREATER THAN 150**

CARDIOGENIC SHOCK

- **Heart Rate**
  - **TOO SLOW (less than 50) with signs of shock:**

☞ ***SPEED UP THE HEART RATE***

(follow ACLS and Protocols)



Usual treatment:
- Atropine
- Pacemaker

Bradycardias & Heart Block

- There are several ECG Rhythms seen with “BRADYCARDIA”
- While you should be able to distinguish each rhythm, what is MORE IMPORTANT is that you simply “identify when the heart rate being TOO SLOW is causing the patient to be symptomatic (SHOCK) . . . .and that you. . .
- KNOW how to treat it.

CARDIOGENIC SHOCK

- **Heart Rate**
  - **TOO FAST (greater than 150) with signs of shock:**

☞ ***SLOW the heart rate***

(follow ACLS and Protocols)

Usual treatment:
- Synchronized Cardioversion

Tachycardias

- Is the patient STABLE or UNSTABLE?
- QRS narrow or wide ???
  - Narrow = “not greater than 120 ms” (3 mm)
  - Wide = “greater than 120 ms (3 mm)

ALL UNSTABLE TACHYCARDIAS:

- SYNCHRONIZED CARDIOVERSION
  - As per agency PROTOCOL and/or ACLS
  - NARROW tachycardias = less initial energy
  - WIDE QRS tachycardias AND A-fib RVR = higher initial energy

ACLS TACHYCARDIA GUIDELINES

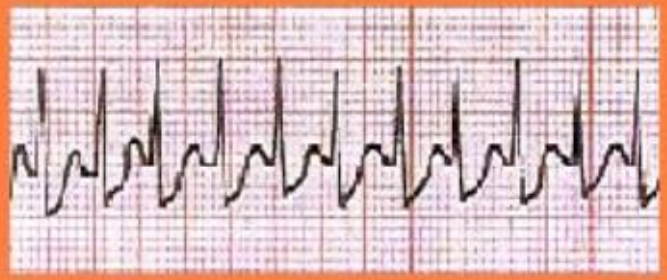
SVT

150

SINUS TACH

100

NSR



THIS RHYTHM IS: SINUS TACHYCARDIA

WE MUST CONSIDER UNDERLYING CAUSES:		AND TREAT THEM:
ANXIETY / FEAR	→	CALM PATIENT
HYPOVOLEMIA		
DEHYDRATION	→	FLUIDS
BLOOD LOSS	→	STOP BLEEDING
MEDICATION EFFECTS	→	CONSIDER MEDICAL Tx
OTHER ILLNESS	→	IDENTIFY & Tx DISORDER

RHTHYM CLUES . . . .

SUPRAVENTRICULAR TACHYCARDIA

SVT is usually PAROXSYMAL -- ie: has a SUDDEN ONSET.

SINUS TACHYCARDIA usually has a " ramp - up " and " ramp - down " period -- a gradual change in HEART RATE.

THIS RHYTHM IS: SUPRAVENTRICULAR TACHYCARDIA (SVT)

MAIN IDENTIFICATION CHARACTERISTIC(S): HEART RATE TOO FAST, USUALLY > 150. P WAVES MAY BE "BURIED" IN THE PRECEDING T WAVES. Pt USUALLY C/O "SUDDEN ONSET of HEART RACING," or "PALPITATIONS."

TREATMENT / INTERVENTIONS:

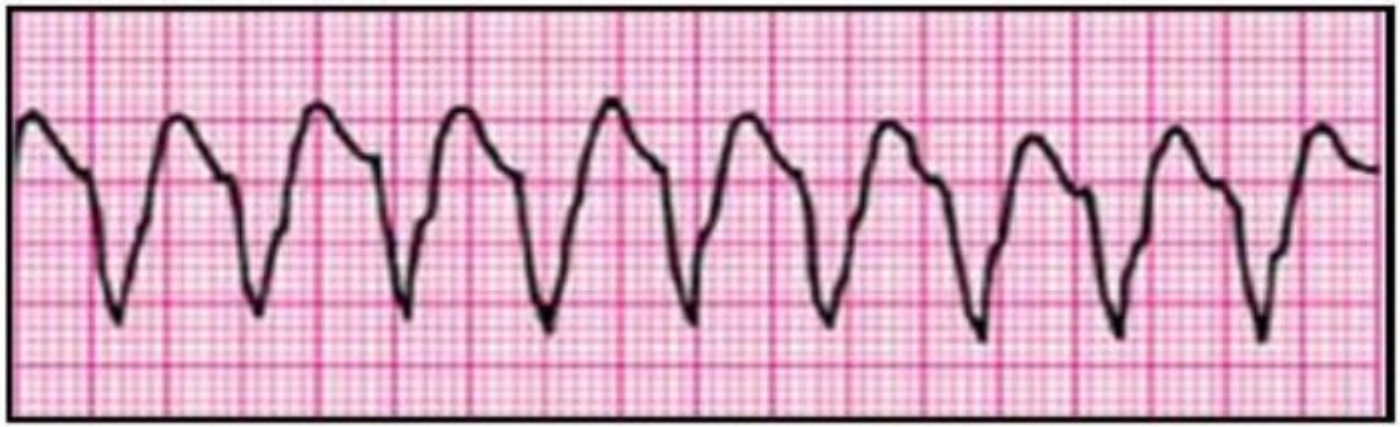
BASED ON WHETHER PATIENT IS STABLE or UNSTABLE . . .

THIS RHYTHM IS:

MAIN IDENTIFICATION CHARACTERISTIC(S):

RATE ----------
RHYTHM ----------
P-R INTERVAL -----
P: QRS RATIO ------
QRS INTERVAL -----

THIS RHYTHM IS: MONOMORPHIC V-TACH



MAIN IDENTIFICATION CHARACTERISTIC(S): WIDE QRS COMPLEXES (> 120 ms)
HR USUALLY BETWEEN 150 - 200; ALL QRS COMPLEXES APPEAR SAME IN SHAPE and DEFELCTION; IF P WAVES SEEN, DISASSOTIATED w/ QRS

RATE ---------- > 100 (usually 150 - 200)
RHYTHM ---------- REGULAR
P-R INTERVAL ----- N/A
P: QRS RATIO ------ N/A
QRS INTERVAL ----- > 120 ms

V-Tach

- NO PULSE – Follow Protocols / ACLS for “V-Fib / V-Tach”
- PULSE – but UNSTABLE – Synchronized Cardioversion
- STABLE - Give MEDS as per Protocols / ACLS

THIS RHYTHM IS: POLYMORPHIC V - TACH

MAIN IDENTIFICATION CHARACTERISTIC(S): WIDE QRS COMPLEXES, MULTIPLE SHAPES AND FORMS, POSITVE AND NEGATIVE DEFLECTIONS, APPEARS TO ROTATE BETWEEN NEGATIVE AND POSITIVE (TWISTING OF POINTS)

RATE	200 - 300
RHYTHM	VARIES
P-R INTERVAL	N/A
P: QRS RATIO	N/A
QRS INTERVAL	VARIES

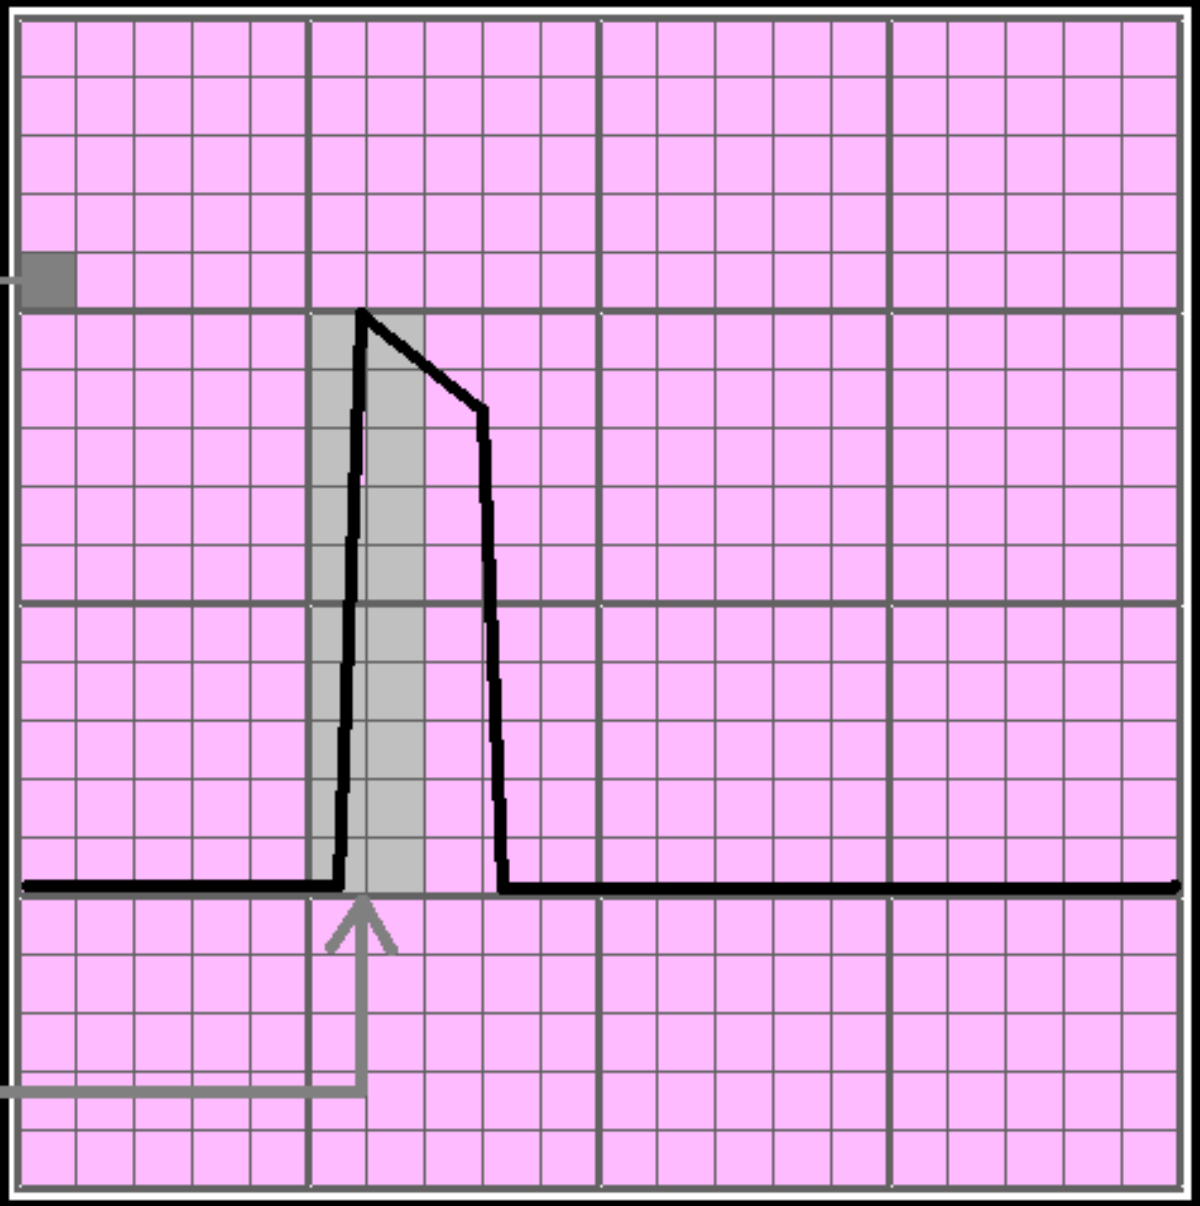
EKG PAPER - THE VERTICAL AXIS:

- SMALL BOXES = 1mm SQUARES
- THE VERTICAL AXIS REPRESENTS AMPLITIUDE (VOLTAGE)
- IN VERTICAL DIRECTION, THERE ARE 5 SMALL BOXES IN EACH LARGE (5mm) BOX
- 1 mv CALIBRATION SPIKE = 10 mm



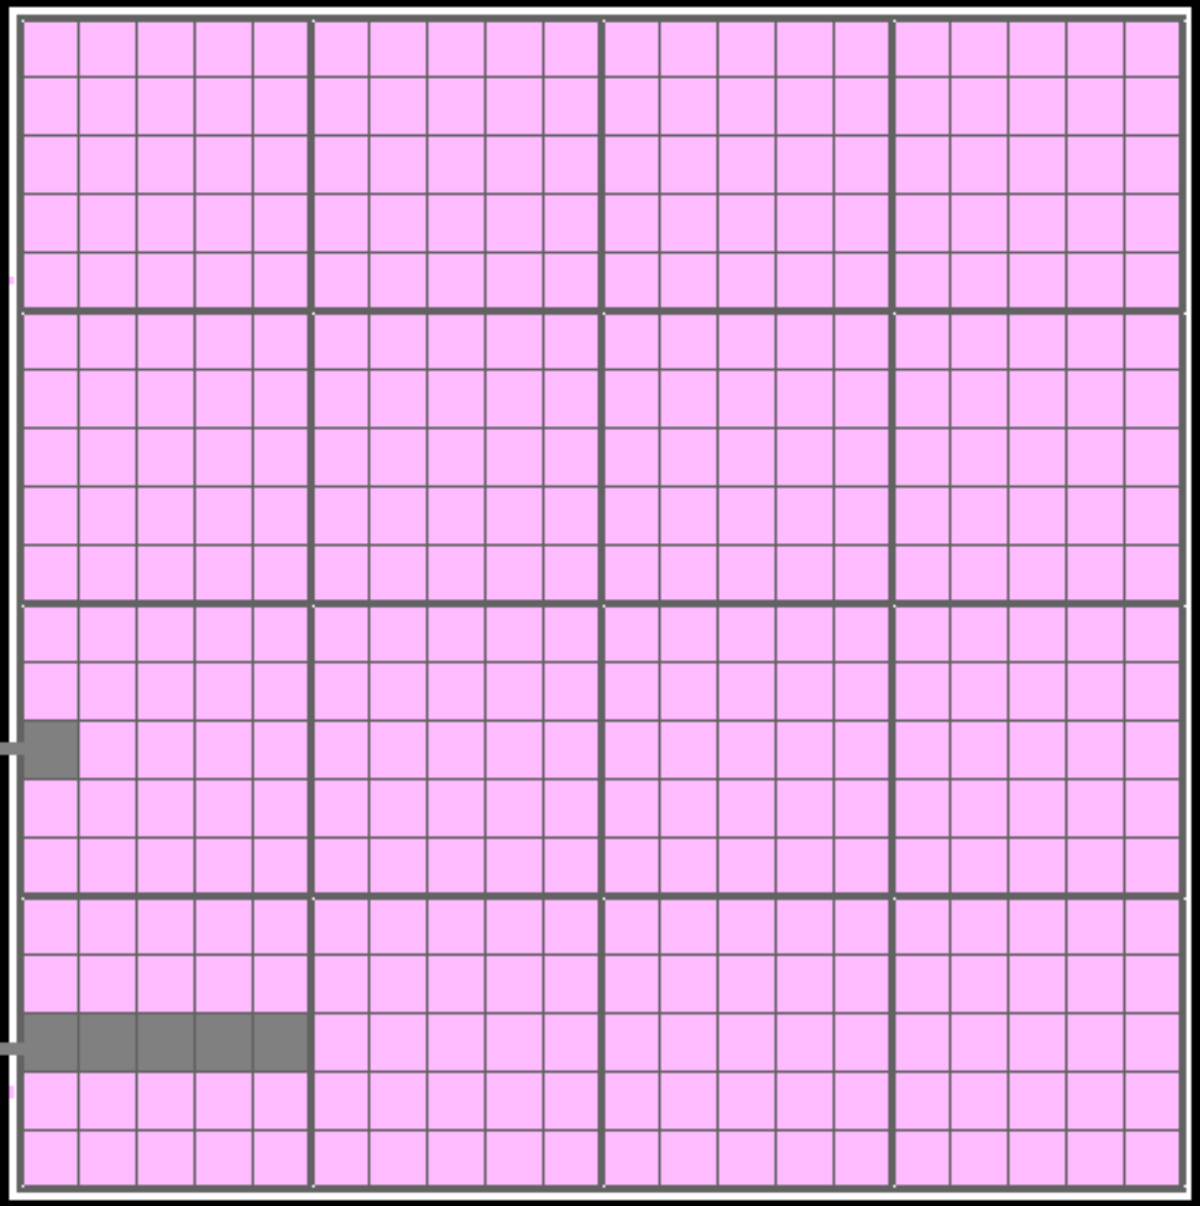
EKG PAPER - THE HORIZONTAL AXIS:

THE HORIZONTAL AXIS REPRESENTS TIME . . .

STANDARD SPEED FOR RECORDING ADULT EKGs = 25 mm / SECOND

EACH 1mm BOX = .04 SECONDS, or 40 MILLISECONDS (40 ms)

5 SMALL BOXES = .20 SECONDS, or 200 MILLISECONDS (200 ms)



If you're going to use your ECG monitor to evaluate the patient's:

- J Points
- ST Segments
- T Waves

It MUST be in the "DIAGNOSTIC" mode

(Not the normal "Monitoring" mode).....

AHA/ACC/HRS Scientific Statement

Recommendations for the Standardization and Interpretation of the Electrocardiogram

Part I: The Electrocardiogram and Its Technology

the often profound alterations in waveforms that can result from precordial electrode misplacement.[85,86] A common error is superior misplacement of V_1 and V_2 in the second or third intercostal space. This can result in reduction of initial R-wave amplitude in these leads, approximating 0.1 mV per interspace, which can cause poor R-wave progression or erroneous signs of anterior infarction.[87] Superior displacement of the V_1 and V_2 electrodes will often result in rSr′ complexes with T-wave inversion, resembling the complex in lead aVR. It also has been shown that in patients with low diaphragm position, as in obstructive pulmonary disease,[88,89]

When LEAD AVR shows ST Elevation:

- **STEMI:** consider occlusion of the Left Main Coronary Artery.
- **NSTEMI** and **Unstable Angina** consider LMCA Occlusion – or TRIPLE VESSEL DISEASE

In patients without STEMI, ST Elevation in AVR, when seen with global indications of ischemia (ST Depression in 8 leads or more), is indicative of advanced multi-vessel disease or significant Left Main Coronary Artery stenosis

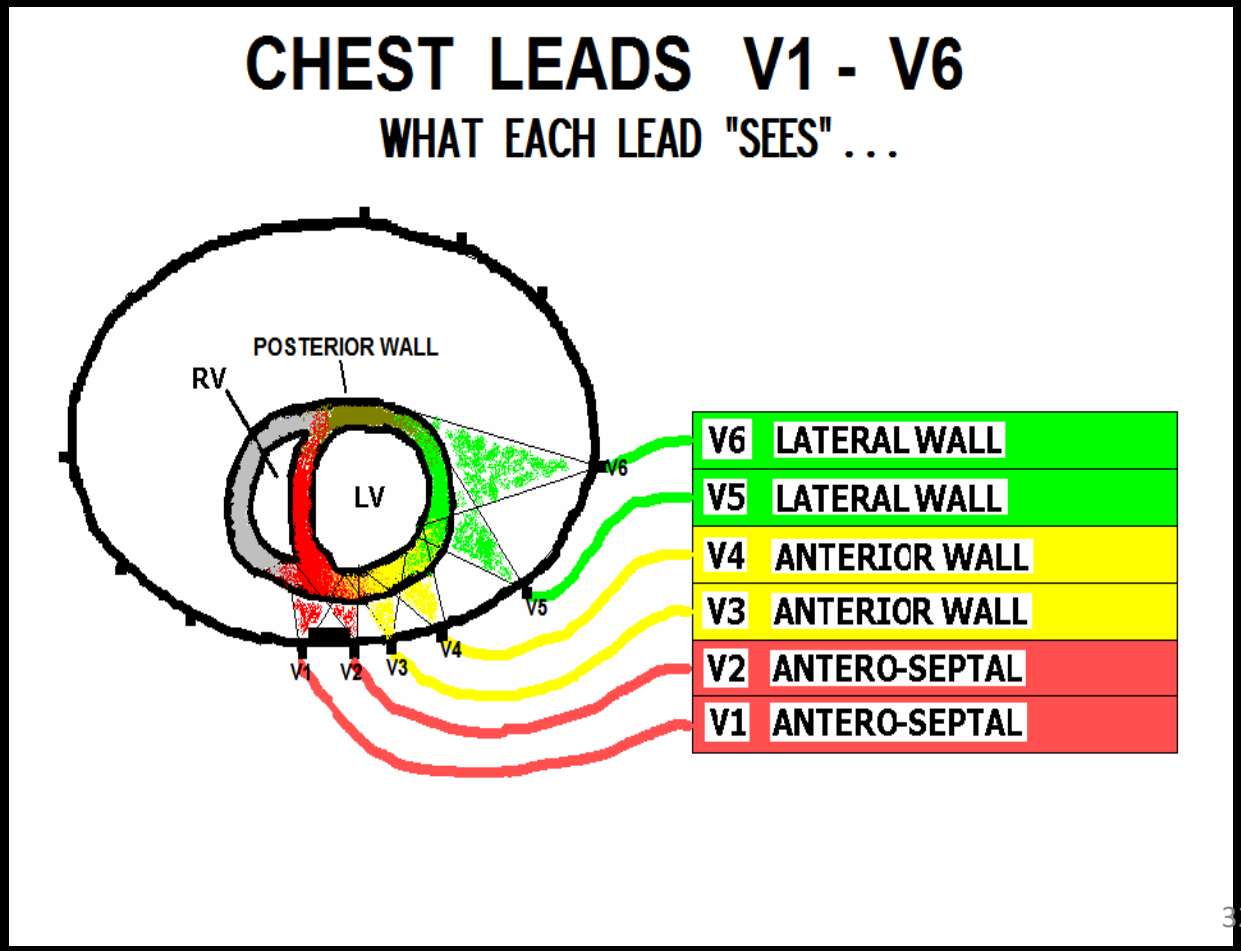
The 12 Lead ECG
Has TWO major BLIND SPOTS . . . . .

The POSTERIOR WALL

&

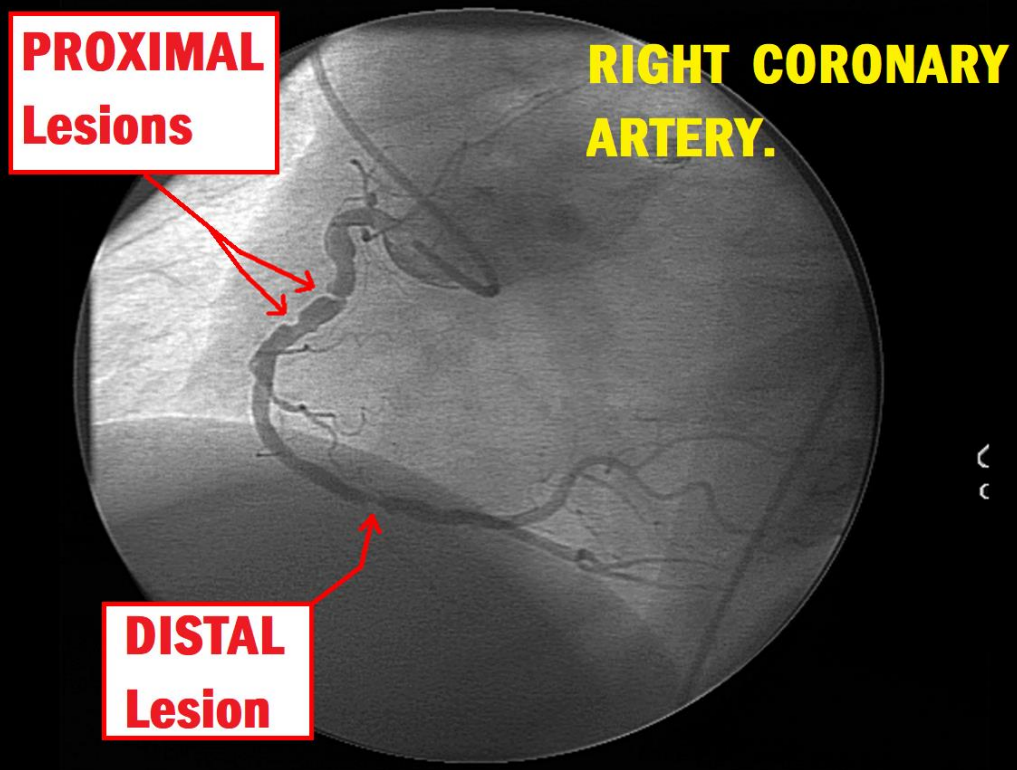
RIGHT VENTRICLE

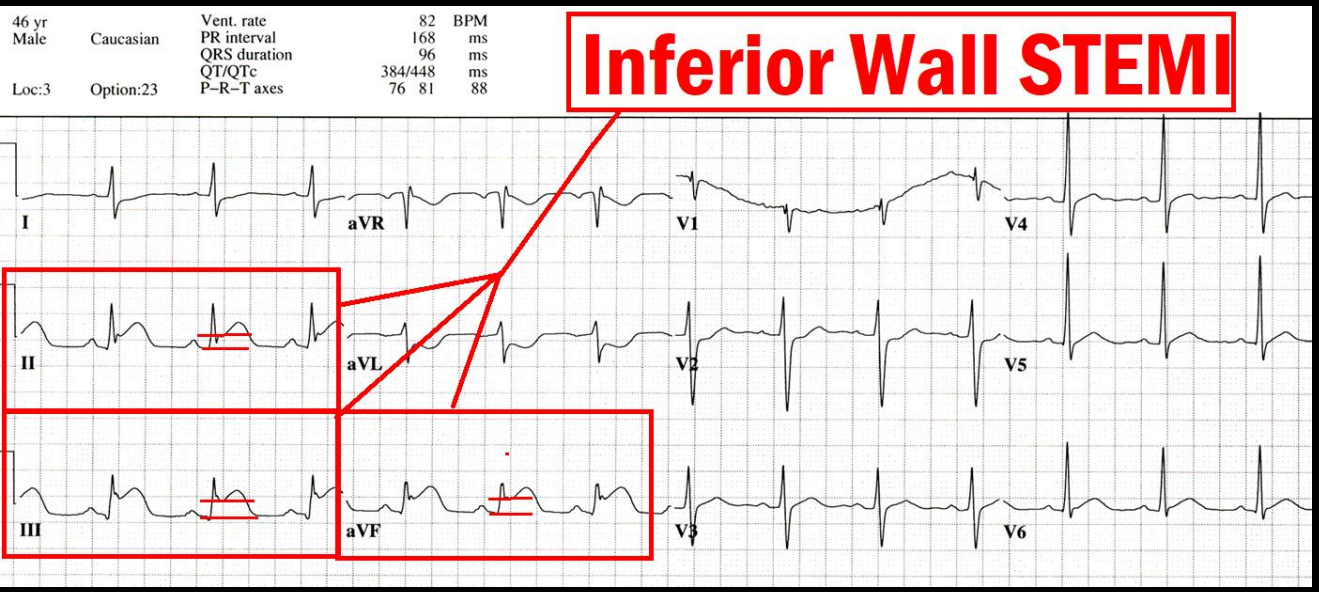


When do we need to see the Right Ventricle?

- All Patient with INFERIOR WALL STEMI (ST Elevation in Leads II, III, aVF).

When you see an EKG with **ST Elevation in Leads II, III and AVF** (Inferior Wall STEMI) – you cannot tell if the blockage is in the PROXIMAL RCA – or the DISTAL RCA.





To see the

RIGHT VENTRICLE . . .

. . . such as in cases of

INFERIOR WALL M.I.

☞ You must do a

RIGHT - SIDED EKG ! !

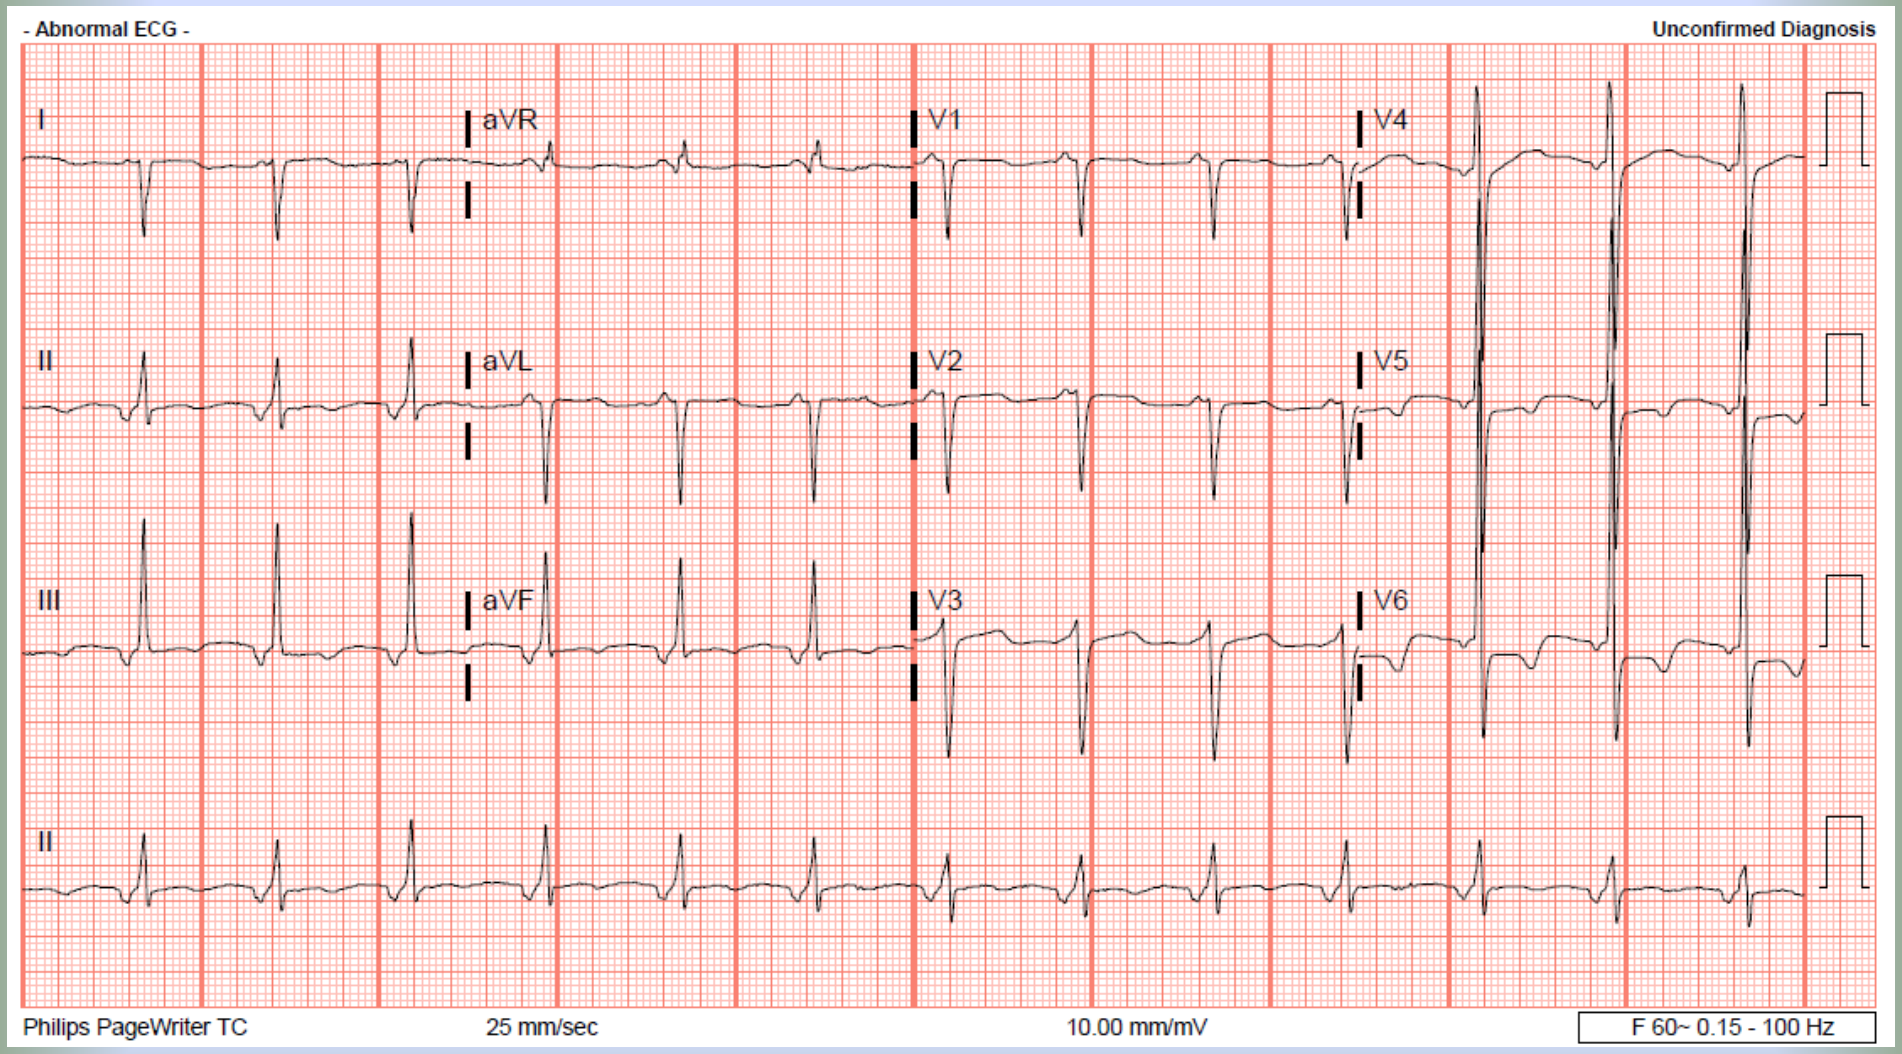
P Wave Axis

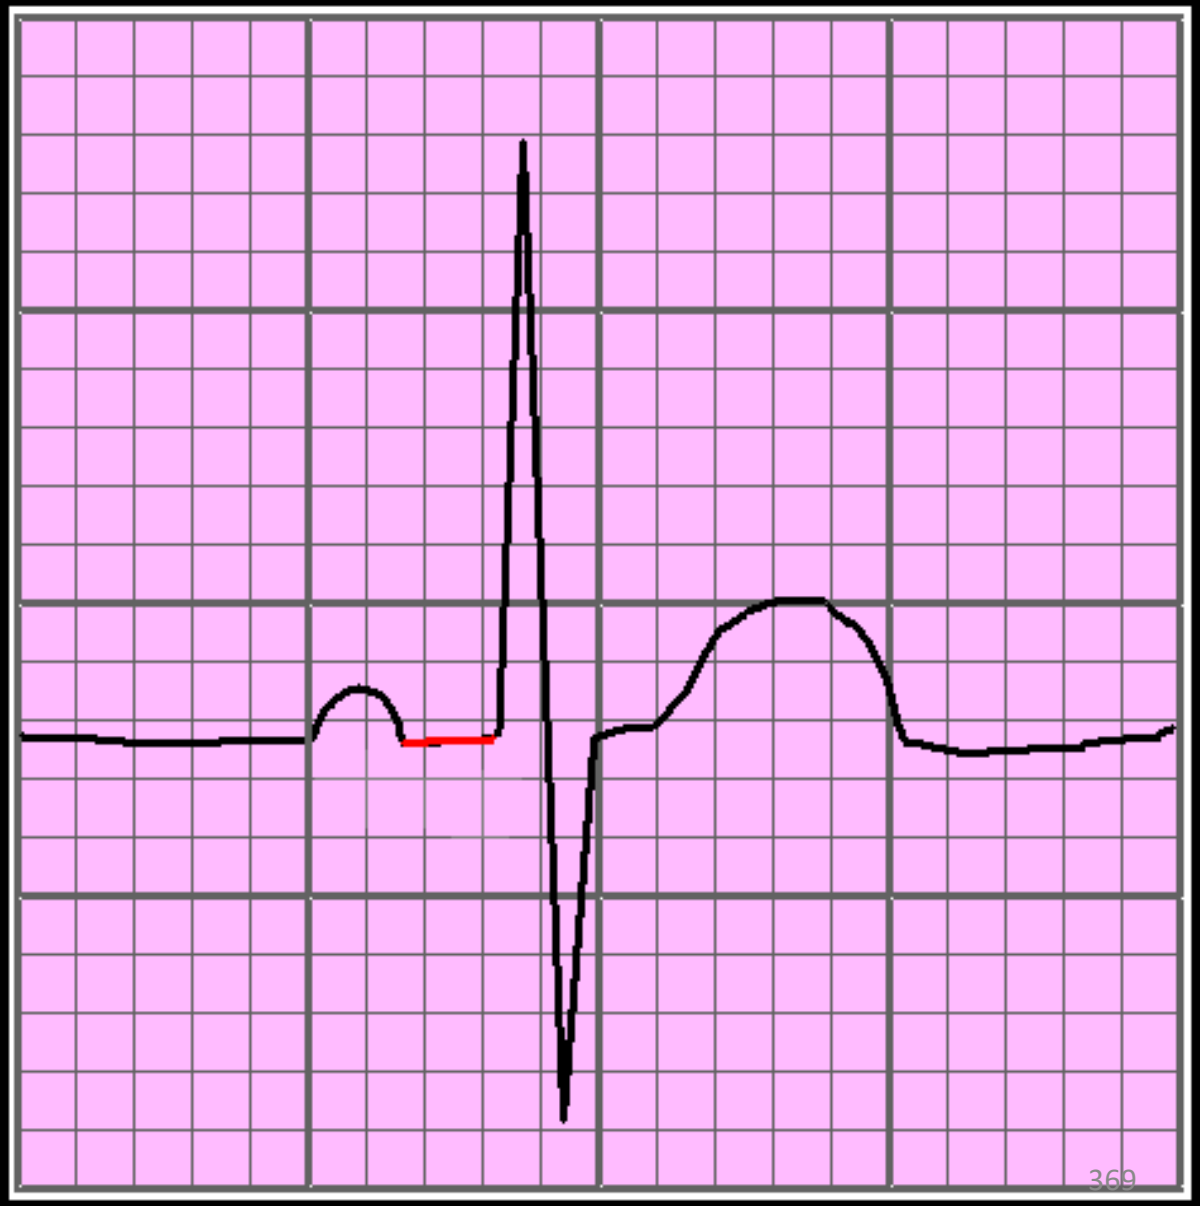
- P waves with abnormal axis (“not pointing in the right direction”) may signify ectopic atrial beats.
- When P waves are inverted in most leads with an abnormally short P-R interval (<120ms) the origin of the rhythm may be the AV node (Junctional Rhythm).

Inverted P waves & short P-R interval:



THE P-R SEGMENT

SHOULD RETURN TO THE ISO-ELECTRIC LINE.

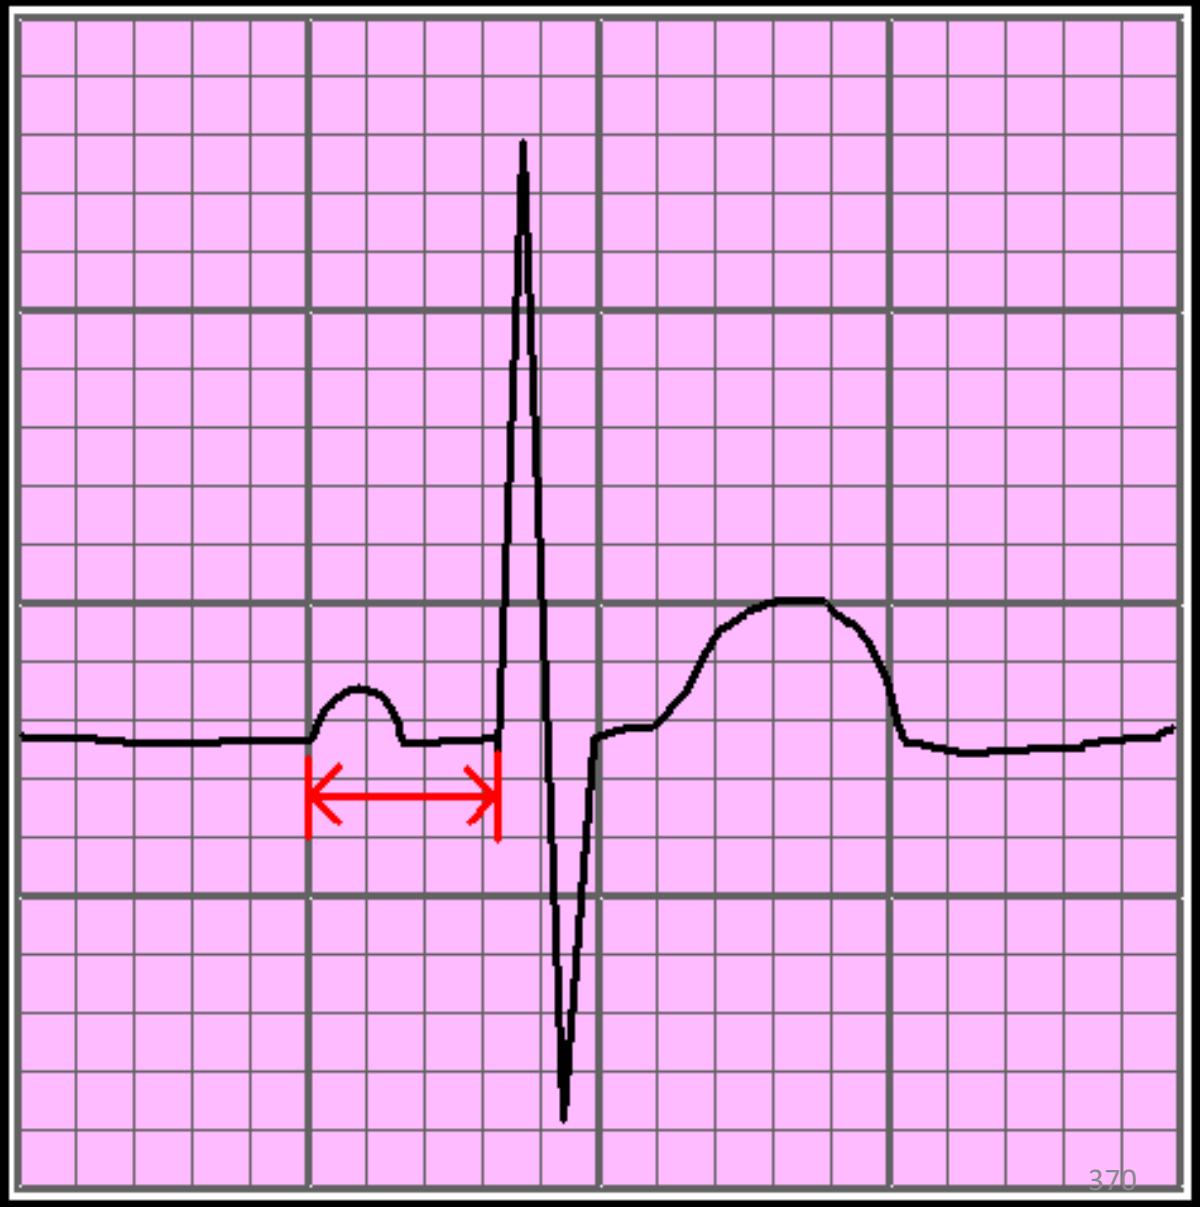


NORMAL P-R INTERVAL

.12 - .20 SEC

or

120 - 200 mSEC



P - R INTERVAL TOO SHORT . . .

LESS THAN 120 mSEC

THINK:

- ECTOPIC ATRIAL ACTIVITY
- PRE-EXCITATION (WPW)
- JUNCTIONAL (nearly on top of QRS, possibly inverted)

P - R INTERVAL TOO LONG

GREATER THAN 200 mSEC

THINK:

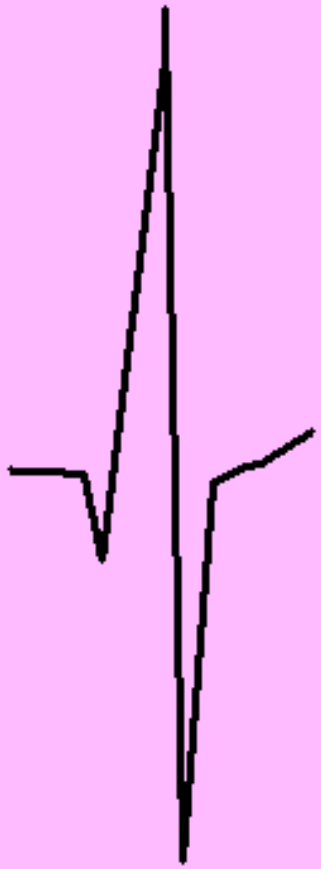
- HEART BLOCK

THE QRS COMPLEX

- MAY BE POSITIVE, NEGATIVE, OR BI- PHASIC, BASED ON THE LEAD VIEWED
- TOTAL WIDTH SHOULD BE LESS THAN 120 ms / or .12

THE QRS COMPLEX

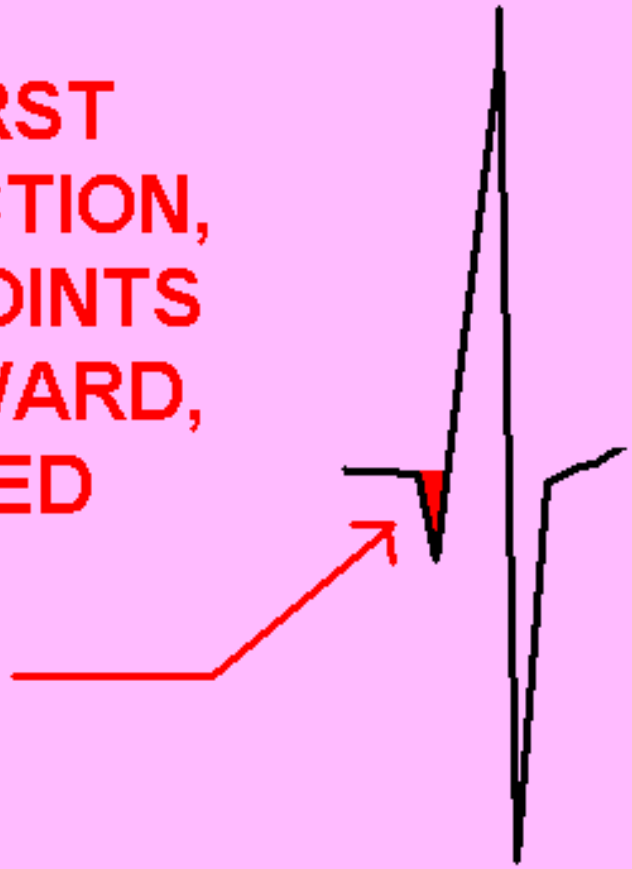
THIS QRS COMPLEX CONSISTS OF 3 DEFLECTIONS . . . .



THE QRS COMPLEX

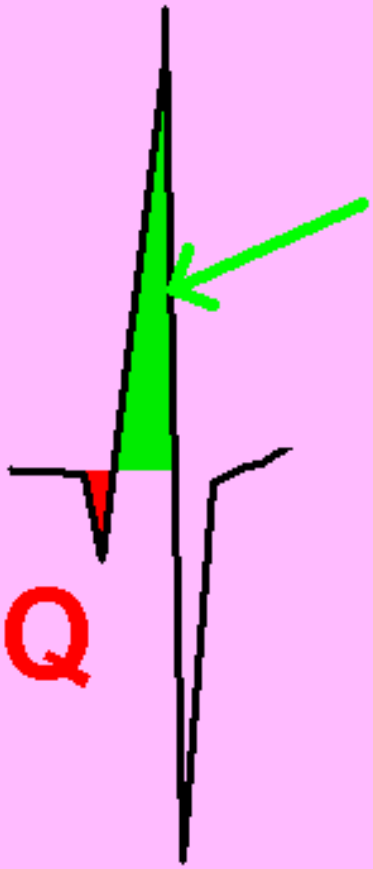
THIS QRS COMPLEX CONSISTS OF 3 DEFLECTIONS . . . .

THE FIRST DEFLECTION, IF IT POINTS DOWNWARD, IS NAMED THE "Q WAVE"



THE QRS COMPLEX

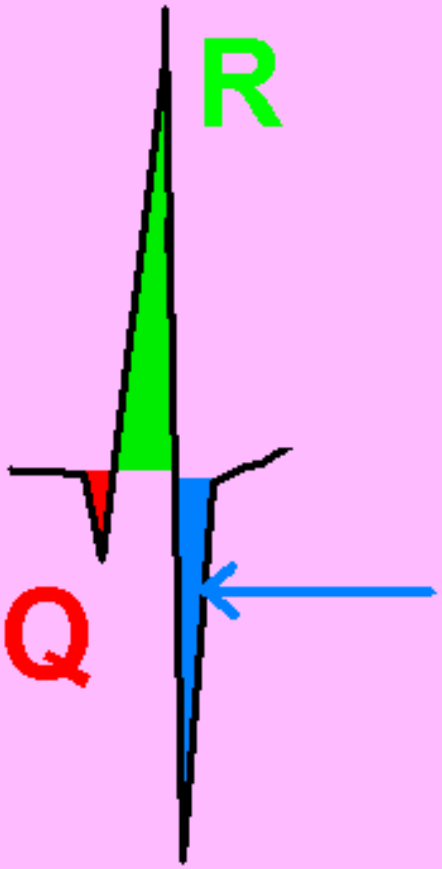
THIS QRS COMPLEX CONSISTS OF 3 DEFLECTIONS . . . .



THE FIRST POSITIVE DEFECTION IS KNOW AS THE "R" WAVE

THE QRS COMPLEX

THIS QRS COMPLEX CONSISTS OF 3 DEFLECTIONS . . . .

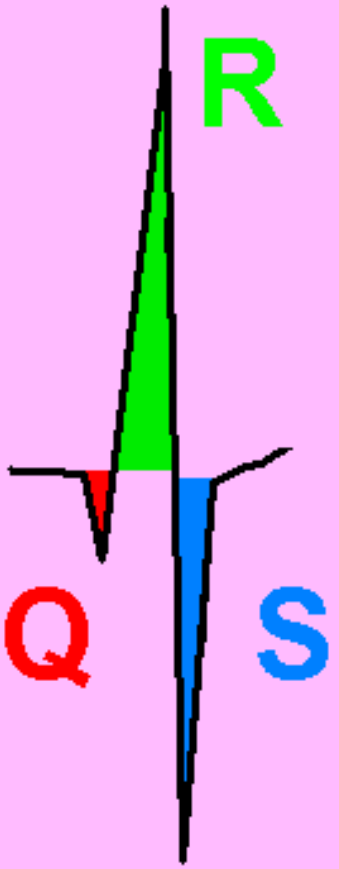


A NEGATIVE DEFLECTION AFTER THE R WAVE IS CALLED THE "S" WAVE

THE QRS COMPLEX

THIS QRS COMPLEX CONSISTS OF 3 DEFLECTIONS . . . .

AND IS THE ONLY TRUE "QRS" COMPLEX



SOME OF THE OTHER VARIATIONS INCLUDE . . . .

THE QRS COMPLEX

WHAT ARE THESE COMPLEXES ??

R

Rsr'

Qr

QS

qRSr'

qR

rS

Rr'

QRS INTERVAL

LESS THAN

.12

OR

120 mSEC

QRS COMPLEX TOO WIDE

WIDER THAN 120 mSEC

THINK:

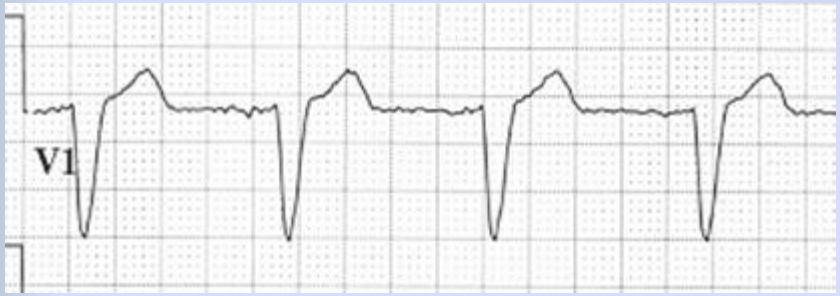
- BUNDLE BRANCH BLOCK
- VENTRICULAR COMPEX (ES)
- PACED RHYTHM
- L VENTRICULAR HYPERTROPHY
- ELECTROLYTE IMBAL. (↑K^+ ↓Ca^{++})
- DELTA WAVE (PRE-EXCITATION)

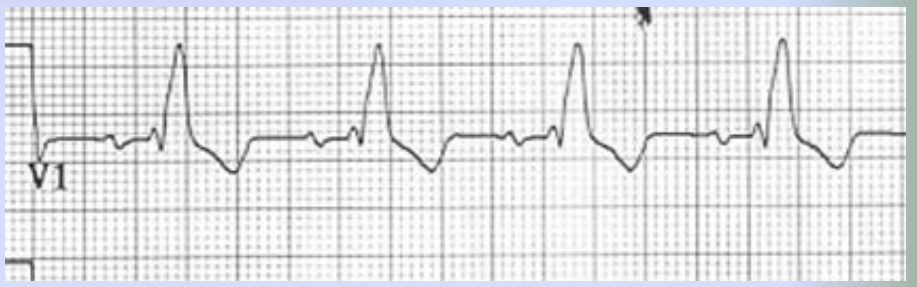
When the QRS is WIDE (> 3mm):

- **If you KNOW the Rhythm is originating ABOVE the Ventricles (such as NSR or any Supraventricular Rhythm) – you should determine if the QRS has a RIGHT or LEFT Bundle Branch Block morphology.**

Normal Sinus and Other "Supraventricular Rhythms" with WIDE QRS (> 120 ms)

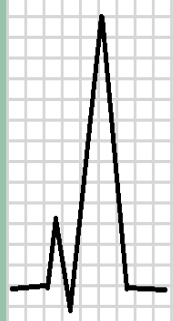
- **Determine LEFT vs. RIGHT Bundle Branch Block Pattern**





Simple “Turn Signal Method” . . .

THE "TURN SIGNAL METHOD" for identifying BUNDLE BRANCH BLOCK



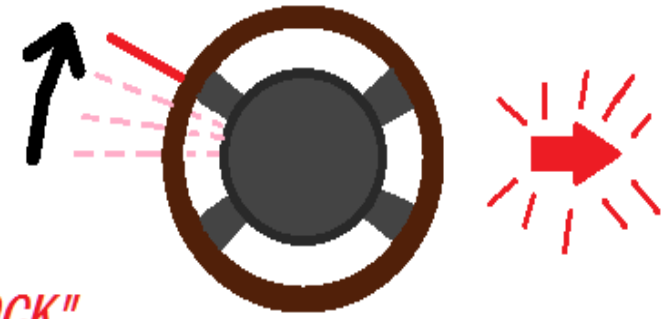
USE LEAD V1 for this technique

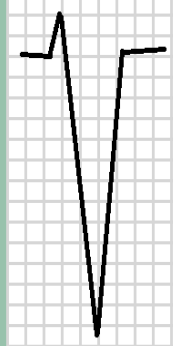
To make a **RIGHT TURN**

you push the turn signal lever **UP**. . . . .

THINK:

"QRS points UP = RIGHT BUNDLE BRANCH BLOCK"





To make a **LEFT TURN**

you push the turn signal lever **DOWN** . . . .

THINK:

"QRS points DOWN = LEFT BUNDLE BRANCH BLOCK"
